- Updated slide 48
- Added slide 52

Updated 10/28/2021

The information contained in these materials is provided for general information only and does not constitute legal or regulatory advice. The ultimate responsibility for complying with the ISO FERC Tariff and other applicable laws, rules or regulations lies with you. In no event shall the ISO or its employees be liable to you or anyone else for any decision made or action taken in reliance on the information in these materials.

## This initiative covers three enhancements:

- Refinements to the existing planned outage process
- A minimum state of charge requirement for storage resources
- Backstop procurement authority for local energy sufficiency (Fall)

# Acronyms

Abbreviation	Definition
BOG	Board of Governors
CIDI	Customer Inquiry, Dispute and Information system
CIRA	CAISO Interface for RA Application
CMRI	Customer Market Results Interface
CPM	Capacity Procurement Mechanism
CV	Cross Validation
DAM	Day-Ahead Market
EOH	End of Hour
HE	Hour-Ending
MOO	Must Offer Obligation
MSOC	Minimum State of Charge

# Acronyms

Abbreviation	Definition
OASIS	Open Access Same-Time Information System
POSO	Planned Outage Substitution Obligation
RA	Resource Adequacy
RACS	Resource Adequacy Capacity Substitution
RTM	Real-Time Market
RUC	Residual Unit Commitment
SC	Scheduling Coordinator
SOC	State of Charge
UCAP	Unforced Capacity

# Schedule and Phases

- Phase 1 (BOG - March) – approved
  - Planned Outage Process (POSO) Enhancements (phase 1, summer 2021)
  - Operationalizing Storage (phase 1, Summer 2021)
  - Backstop capacity procurement – CPM for local energy sufficiency (Fall 2021 for RA year 2022)

## Schedule and Phases (continued)

- Phase 2A (BOG - July 2021)
  - RA import requirements
- Phase 2B (BOG – November 2021)
  - Unforced capacity evaluations
  - Determining system RA requirements
  - System RA showings and sufficiency testing – individual assessments
  - Must offer obligations and bid insertion modifications
  - UCAP for local studies
  - Backstop capacity procurement – CPM modifications and availability penalty structure for RMR resources
  - POSO Enhancements (Phase 2)
  - System RA showings and sufficiency testing – portfolio assessment
  - Flexible RA

# RESOURCE ADEQUACY CAPACITY SUBSTITUTION (PREVIOUSLY PLANNED OUTAGE SUBSTITUTION)

# Key Features

- All planned outages for RA resources must bring full substitute capacity for an outage to be approved
- Requested outage extensions require a new outage card and substitute capacity (if the outage has started)

# Benefits

- Provides clarity regarding planned outage requirements for RA capacity
- Ensures that the ISO has adequate RA capacity to maintain reliability, even when resources cannot return to service as originally planned
- Very focused and easily implementable by this summer.
  - An interim solution until a long-term solution is developed

# SCENARIOS

## Scenario 1 – Planned outage submitted by 30 days before the RA month with a substitute resource

- SC A's resource has an RA Obligation of 20 MW and submits the supply plan in CIRA 45 days in advance of the RA month
- SC A has a 20 MW planned outage. They:
  - submit an outage request in OMS by 30 days before the RA month
  - submit a substitute resource that covers 100% of the RA impact in CIRA within 24 hours after 30 days before RA month (last day to update supply plan)
- ISO validates that the substitution has been provided

## Scenario 2 – Planned outage by 30 days before the RA month without a substitute resource

- SC B's resource has an RA Obligation of 20 MW and submits the supply plan in CIRA 45 days in advance of the RA month
- SC B has a 20 MW planned outage. They:
  - submit an outage request in OMS by 30 before the RA month
  - ~~– submit a substitute resource that covers 100% days of the RA impact in CIRA within 24 hours after 30 days before RA month (last day to update supply plan)~~
- ISO validates that the substitution has been provided

**DENIED**

## Scenario 3 – Submit a partial substitution for a planned outage

- SC C's resource has an RA Obligation of 20 MW and submits the supply plan in CIRA 45 days in advance of the RA month
- SC C has a 20 MW planned outage. They:
  - submit an outage request in OMS by 30 days before the RA month
  - submit a substitute resource that covers 90% of the RA impact
- ISO validates that the substitution has been provided

**DENIED**

ISO PUBLIC – © 2021 CAISO

# Questions

## Scenario 4 – Planned outage submitted with a substitute resource after T-30

- SC D's resource has an RA Obligation of 20 MW and submits the supply plan in CIRA 45 days in advance of the RA month of its obligation
- SC D has a 20 MW planned outage. They:
  - submit an outage request in OMS 28 days before the RA month
  - submit a substitute resource covering 100% of the RA impact in CIRA within 24 hours of the first RA substitute capacity validation run after the outage was submitted

# Scenario 4 – RA Capacity Substitution Validation Run

- Example
  - The RA capacity substitution validation run is at 8:00 am each day
  - SC C submits a planned outage at 9:00 am on Monday
  - SC C will have to submit a substitution by 24 hours after the next validation run, which will occur at 8:00 am on Tuesday
  - Substitution deadline is 8:00 am on Wednesday
- The substitution deadline is no less than 24 hours and no more than 47 hours.

# Questions

## Scenario 5 – Submitting multiple resources to substitute for one outage

- SC E:
    - submits a planned outage request in OMS for 20 MW
    - Offers 3 resources to cover 100% of the RA impact in CIRA
      - Resource 1 = 10 MW
      - Resource 2 = 7 MW
      - Resource 3 = 3 MW
- Resource and MW value are specific
- ISO validates that the substitution has been provided

## Scenario 6 – Extend an outage

- SC F's resource is on an outage that ends on September 21. They have a substitute resource covering the outage
- SC F finds that the outage is going to take 3 additional days after September 21
- SC F submits a new outage request in OMS through September 24 and submits a substitute resource in CIRA

# Questions

## Scenario 7a – A planned outage that spans more than one month is submitted after T-30 for second RA month

- SC G submits a supply plan for the January RA month
  - Resource G will be used for RA in January and February
- SC G submits a planned outage on January 5 that will span January 25 through February 5
- SC G submits a substitute resource that covers 100% of the RA impact by the outage for all the dates of the outage.

January

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
						1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	31					

Planned Outage Submitted within 30 days of the start of February (RA Month)

February

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
		1	2	3	4	5

13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28					

Date of Outage

The planned outage and substitution are submitted in a timely manner for January and February RA months

## Scenario 7b – A planned outage spans more than one month is submitted after T-30 for initial RA month

- SC H submits a supply plan for the January RA month
  - Resource H will be used for RA in January and February
- SC H submits a planned outage on December 14 that will span January 25 through February 5
- SC H will need to submit:
  - a substitute resource for January 25 through January 31 within 24 hours of the outage submission (covers 100%)
  - A substitute resource for February 1 through February 5 within 24 hours after T-30 for the February RA month (covers 100%)

December

20	21	22	23	24	25	26
27	28					

The planned outage and full substitution are submitted in a timely manner for January. Also a full substitution will be submitted for February in a timely manner

## Scenario 7c – A planned outage that spans more than one month, submitted after T-30, with a partial substitution

- SC I submits a supply plan for the January RA month
  - Resource I will be used for RA in January and February
- SC I submits a planned outage on December 14 that will span January 25 through February 5
- SC I submits
  - a substitute resource for January 25 through January 31 within 24 hours of the outage submission (100%)
  - A substitute resource for February 1 through February 5 within 24 hours after T-30 for the February RA month (70%)
- ISO will deny the outage

**DENIED**

27	28					

The planned outage and full substitution are submitted in a timely manner for January. Also a partial substitution will be submitted for February in a timely manner

## Scenario 7d – A planned outage that spans more than one month, submitted before T-30, with a partial substitution

- SC J submits a supply plan for the January RA month
  - Resource I will be used for RA in January and February
- SC J submits a planned outage on December 14 that will span January 1 through February 5
- SC J submits
  - a substitute resource for January 1 through January 31 within 24 hours of the outage submission (100%)
  - A substitute resource for February 1 through February 5 within 24 hours after T-30 for the February RA month (70%)
- ISO will not deny the outage but subject to RAAIM penalties

20	21	22	23	24	25	26
27	28					

The planned outage and full substitution are submitted in a timely manner for January. Also a partial substitution will be submitted for February in a timely manner, which occurs while the outage is in effect.

# Questions

## Scenario 8 – A substitute resource takes a planned outage

- Resource K has a 20 MW planned outage
- Resource L is the approved substitute resource to cover Resource K's RA obligation
  - SC L is now responsible for the RA Obligation
- Resource L needs to take a planned outage
  - SC L submits the outage in OMS
  - SC L submit a substitute resource in CIRA to cover 100% of its obligation

# Questions

## Other Key Points

- This initiative covers planned outages only, not forced
- Definitions of planned and forced have not changed
- Resources taking outages due to transmission outages and off-peak opportunity outages are exempt

## Other Key Points

- Substitutions are made in CIRA by the SC for the resource. They will not impact the LSE SC's RA showing
- Only internal generators can be used as planned outage substitutes (no imports)
- Settlements – if outage is denied and resource does not meet its MOO, RAAIM penalties

## Reminders...

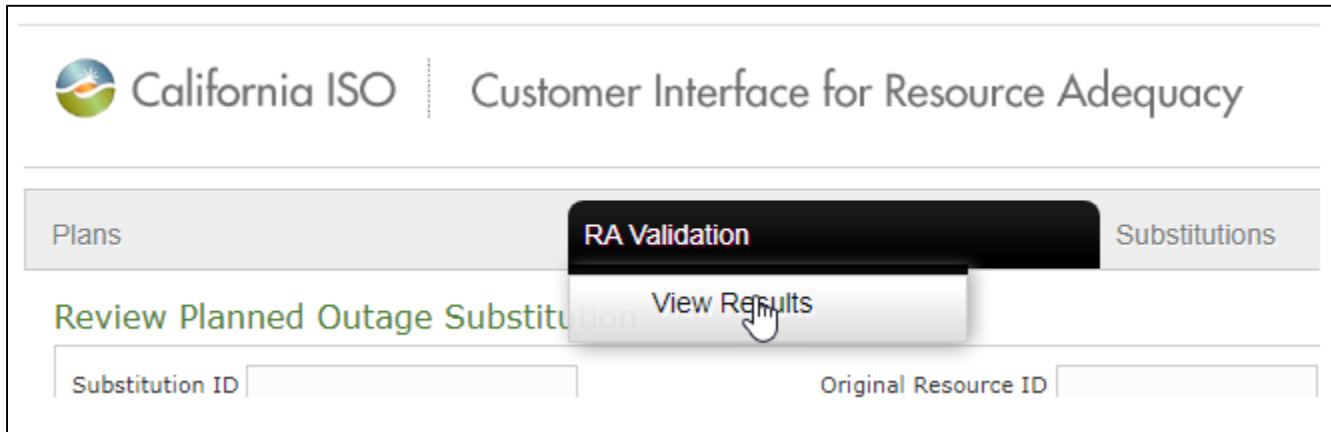

- If planned outage is only partially covered by substitution, the outage will be denied
- Once a resource is shown as a substitute it its subject to all the same obligations as any RA resource, including substitution requirements.

- View RACS assignments details. This will show the assigned RACS MW as well as the current status of their substitution. Status will update automatically as soon as substitution is provided.

# Questions

# MINIMUM STATE OF CHARGE REQUIREMENT

# Key Points

- Restrictions on state of charge managed through a new tool called the minimum state of charge (MSOC) requirement
  - Applies to RA resources only
- MSOC requirement is a temporary solution with a sunset date of two years after implementation to be replaced by a market-based solution
- Will only be used under certain conditions
  - Residual Unit Commitment (RUC) under-gen infeasibility

# Background

- ISO expects about 1800 MW of storage capacity available to provide RA by August 2021
  - Currently there are about 550 MW of storage available for RA capacity
- MSOC requirement will ensure state of charge availability for evening peak periods
  - This requirement will not be permanent
- A new energy storage enhancements initiative will begin in Q2 2021 to develop a market-based tool to procure state of charge from storage resources and provide compensation for that product

# What is the purpose of the MSOC requirement?

- Day-Ahead Market (DAM) commitments are not immutable and can be adjusted and undone by the Real-Time Market (RTM) optimization
  - The RTM sends dispatch instructions to resources based on prevailing market prices and resource bids and does not consider day-ahead schedules
- The ISO's current 5-minute RTM looks ahead 65 minutes, but most storage resources take several hours to fully charge
  - In contrast, the DAM optimizes the use of resources across the full 24-hour planning horizon

# What is the purpose of the MSOC requirement?

- MSOC requirement ensures storage resources providing RA capacity are sufficiently charged in the RTM to meet DAM discharge schedules when storage resources are needed to meet evening net-load peak

# MSOC requirement will only be applied on days where needs are critical

- ISO will use the results from the DA RUC process to determine days when minimum state of charge will be required
- Minimums will only be imposed on days when RUC is under-gen infeasible
  - This happens very infrequently, but indicates tight system conditions
- Operators will have further opportunity to drop requirements in real-time if conditions are different in the RTM

## Requirements are designed to reduce impact to storage

- MSOC requirement will be implemented in the RTM to set a minimum threshold state of charge for each RA storage resource with a DA discharge award
  - A series of “critical hours” will be determined by operations, which will be the only hours that the requirement is imposed
  - Minimums will be imposed on hours directly prior to discharge schedules, and not in hours earlier in the day
  - The RTM will optimally schedule storage resources to charge or hold state of charge to meet these requirements

# Public reporting via OASIS

- The ISO will report the following for the next trade day, **only** for trade days that have non-zero RUC under-gen infeasibility for at least one trade hour:
  - Critical hours used to calculate the minimum end-of-hour (EOH) SOC requirements
  - RUC under-gen infeasibility hours and MW amounts

# Sample OASIS Report Mockup: RUC Under Supply Infeasibility and Enforced Constraints

Trade Date	Trade Hour	Under-Gen Infeasibility MW	Critical Hour Flag	Time Stamp of Min SOC Deactivation in RTM
7/30/2021	1	0.00	N	
7/30/2021	2	0.00	N	
7/30/2021	3	0.00	N	
7/30/2021	4	0.00	N	
7/30/2021	5	0.00	N

7/30/2021	19	0.00	Y	
7/30/2021	20	9.00	Y	
7/30/2021	21	8.00	Y	
7/30/2021	22	7.00	Y	
7/30/2021	23	0.00	Y	
7/30/2021	24	0.00	N	

Note that critical hours may be different from RUC under-gen infeasibility hours

(This is a preliminary report mockup. The final report may vary.)

# Public reporting via OASIS

- The ISO will report the following for the current trade day **only** if deactivation of MSOC enforcement event occurred in a trade day:
  - Date/time of global deactivation of enforcement of binding MSOC in RTM

# Sample OASIS Report Mockup: RUC Under Supply Infeasibility and Enforced Constraints

Trade Date	Trade Hour	Under-Gen Infeasibility MW	Critical Hour Flag	Time Stamp of Min SOC Deactivation in RTM
7/31/2021	1	0.00	N	
7/31/2021	2	0.00	N	
7/31/2021	3	0.00	N	
7/31/2021	4	0.00	N	
7/31/2021	5	0.00	N	
7/31/2021	6	0.00	N	
7/31/2021	7	0.00	N	
7/31/2021	8	0.00	N	
7/31/2021	9	0.00	N	
7/31/2021	10	0.00	N	
7/31/2021	11	0.00	N	
7/31/2021	12	0.00	N	
7/31/2021	13	0.00	N	
7/31/2021	14	0.00	N	7/31/2021 13:57
7/31/2021	15	0.00	N	7/31/2021 13:57
7/31/2021	16	0.00	N	7/31/2021 13:57
7/31/2021	17	0.00	N	7/31/2021 13:57
7/31/2021	18	10.00	N	7/31/2021 13:57
7/31/2021	19	0.00	Y	7/31/2021 13:57
7/31/2021	20	9.00	Y	7/31/2021 13:57
7/31/2021	21	8.00	Y	7/31/2021 13:57
7/31/2021	22	7.00	Y	7/31/2021 13:57
7/31/2021	23	0.00	Y	7/31/2021 13:57
7/31/2021	24	0.00	N	7/31/2021 13:57

- The MSOC requirement was cancelled for HE 14
- The report is updated with the date/time of deactivation
- The RUC infeasibility and critical hours remain the same to preserve historical data

(This is a preliminary report mockup. The final report may vary.)

ISO PUBLIC – © 2021 CAISO

## Summary: Public reporting via OASIS

- Market participants can use the OASIS report to identify which days the ISO enforced the MSOC constraint
- The ISO reports the RUC “Under-Supply Infeasibility” and the “Critical Hour” for each trade date
  - Only on those days when the under-gen infeasibility is greater than zero will the ISO enforce the MSOC
- The MSOC constraint is enforced in the critical hour, which may include additional hours than the RUC under-supply infeasibility
- Report navigation path: OASIS > Energy > System > RUC Under Supply Infeasibility and Enforced Constraints

# Resource-specific reporting via CMRI

- The ISO will publish the following for the next trade day:
  - Binding minimum EOH SOC requirements that are generated by DAM and are more restrictive than lower SOC limits listed in Master File + any existing outages
- This report will publish on a similar timeline as the DAM results
- This report is **not** updated if the MSOC requirement is deactivated in real-time

# CMRI Report Mockup: Binding Minimum EOH SOC Requirements

Trade Date	Trade Hour	Resource ID	Market Type	Min EOH SOC (MWh)
7/30/2021	16	ABC	DAM	30.00
7/30/2021	17	ABC	DAM	80.00

7/31/2021	23	ABC	DAM	30.00

- If 30 MWh is your existing lower SOC limit, this trade hour would not be shown.
- The report only shows when the SOC is more restrictive than current parameters.

(This is a preliminary report mockup. The final report may vary.)

# Questions

# MARKET SIMULATION

# Market participant pre-market simulation actions

- Market simulation structured scenarios provide customers with the ability to preview and test new functionality from bid to bill
- Complete registration for structured scenarios by **April 26, 2021**
- Market participants will need to register their request with the ISO to participate in the **Resource Adequacy Enhancements: Track 1** project simulation via the [MarketSim@caiso.com](mailto:MarketSim@caiso.com) mailbox

# Market Sim Scenarios

Scenario Number	Scenario Execution Trade Date: TBD	
1	Description	Fully covered substitution
	ISO Actions	<ol style="list-style-type: none"> <li>1. Copy all references from Production</li> <li>2. Run the cross validation, new POSO</li> </ol>
	EIM Market Participant Actions	N/A
	ISO Market Participant Actions	<ol style="list-style-type: none"> <li>1. Upload Supply Plans</li> <li>2. Verify in CIRA for CV &amp; new POSO result</li> <li>3. Submit Outage card</li> <li>4. Validate in CIRA for CV &amp; new POSO result</li> <li>5. Submit the fully covered substitution</li> </ol>
	Expected Outcome	Outage is not denied
	Anticipated Settlement Outcome	N/A

# Market Sim Scenarios

Scenario Number	Scenario Execution Trade Date: TBD	
2	Description	Less than full substitution
	ISO Actions	<ol style="list-style-type: none"> <li>1. Copy all references from Production</li> <li>2. Run the cross validation, new POSO</li> </ol>
	EIM Market Participant Actions	N/A
	ISO Market Participant Actions	<ol style="list-style-type: none"> <li>1. Upload Supply Plans</li> <li>2. Verify in CIRA for CV &amp; new POSO result</li> <li>3. Submit Outage card</li> <li>4. Validate in CIRA for CV &amp; new POSO result</li> </ol>
		5. Submit the fully covered substitution
	Expected Outcome	Outage is denied
	Anticipated Settlement Outcome	N/A

# Market Sim Scenarios

*\*This scenario will be tested as unstructured*

Scenario Number	Scenario Execution Trade Date: TBD	
3	Description	Outages already started cannot be extended
	ISO Actions	N/A
	EIM Market Participant Actions	N/A
	ISO Market Participant Actions	<ol style="list-style-type: none"> <li>1. Submit an Outage that starts next day/next hour</li> <li>2. After Outage has started, Market Participant to extend the outage</li> </ol>
	Expected Outcome	Outages already started cannot be extended
	Anticipated Settlement Outcome	N/A

# Market Sim Scenarios

Scenario Number	Scenario Execution Trade Date: TBD	
4	Description	Binding Min EOH SOC Requirements
	ISO Actions	CAISO will setup a scenario where RUC under-gen infeasibility is triggered for at least 1 hour in trade day T+1
	EIM Market Participant Actions	N/A
	ISO Market Participant Actions	N/A
	Expected Outcome	Verify that DAM binding Min SOC requirements is published for trade date T+1 (CMRI) Verify that RUC undergen infeasibility is published for trade date T+1. (OASIS) Verify that Critical Hours are published for trade date T+1. (OASIS) Verify enforcement of binding min end-of-hour SOC requirements for RA storage resources in RTM during trade date T+1.
	Anticipated Settlement Outcome	<ul style="list-style-type: none"> <li>• CAISO will execute settlements calculations.</li> <li>• SCs will validate their statements.</li> </ul>

# Market Sim Scenarios

Scenario Number	Scenario Execution Trade Date: TBD	
5	Description	Deactivation of Enforcement of Binding Min EOH SOC Requirements in RTM
	ISO Actions	CAISO will setup a scenario where RUC under-gen infeasibility is triggered for at least 1 hour of trade day T+1. CAISO operator deactivates enforcement of binding Min EOH SOC requirements in RTM before noon of Trade day T+1.
	EIM Market Participant Actions	N/A
	ISO Market Participant Actions	N/A
	Expected Outcome	Verify that DAM binding Min SOC requirements is published for trade date T+1 (CMRI). Verify that RUC undergen infeasibility is published for trade date T+1. (OASIS). Verify that Critical Hours are published for trade date T+1. (OASIS). Verify that time stamp when CAISO operator deactivated enforcement of binding Min EOH SOC requirements in RTM is published for trade date T+1. (OASIS). Verify enforcement of binding min end-of-hour SOC requirements for RA storage resources STOPS in RTM during trade date T+1 from time of deactivation onwards.
	Anticipated Settlement Outcome	<ul style="list-style-type: none"> <li>• CAISO will execute settlements calculations.</li> <li>• SCs will validate their statements.</li> </ul>
