

## Explanation of Withdrawn Operating Procedures for MRTU

Various Operating Procedures will not be required after MRTU and some procedures will need to be incorporated with other documents because of the MRTU changes. The following lists the various procedures that will be withdrawn and a brief description of the reasons:

Procedure #	Title	Description of Withdrawal
M-401	Real-Time Intra-Zonal Congestion Management	Intra-Zonal congestion after MRTU will be solved by the market optimization software. The procedure number (M-401) will be used by DA Market instead.
M-401A	RMR References	This document lists areas of local congestion. This information will no longer be an attachment to M-401 because M-401 is becoming a Day-Ahead procedure. This attachment will move to G-203 (RMR) to provide MPs visibility.
M-401B	Effectiveness Factors	Because M-401 will be changing into a Day-Ahead Market procedure, this info will be moved as an attachment to M-403, Real-Time Markets.
M-425	OOS/OOM Dispatching	OOS and OOM will become “Exceptional Dispatches” covered under M-405 (new).
M-431	Proxy Bid Price Creation for Must-Offer Obligation Units	The concept of Must-Offer Obligation will go away after MRTU. The Market Instruments BPM Attachment F shows the calculation of a generated bid curve.
M-432 & attachments	Must-Offer Waivers	The concept of Must-Offer Obligation will go away after MRTU.
M-433	Automatic Mitigation Procedure (AMP)	AMP detects and automatically mitigates a Market energy bid that violates an explicit anti-competitive threshold and has material impact on market prices. AMP will be replaced by the MPM module and will be found in M-401 & M-403.
M-434	Publishing the Identity of Late Scheduling Coordinators	Scheduling Coordinators will not be required to have balanced schedules. It is anticipated that the ISO will not hold the markets open.
M-438 & all attachments	Local Area Reliability Capacity Commitment	The concept of load serving entities having to commit capacity to local areas may go away after MRTU. This is still under policy review.
M-439	Portfolio Balancing	Balanced portfolios are not required after MRTU.
