Day-Ahead Market		Distribution Restriction: None	

Scheduling Coordinator (SC)

A. Running the Day-Ahead Market Procedures

A.1. Purpose

This procedure provides guidelines for and describes:

- Preparing for and running the Day-Ahead Market (DAM) activities;
- **Manual** Commitment and Dispatch of Reliability Must Run (RMR) Units to meet local reliability needs, manage Congestion on on-competitive paths, provide Ancillary Services (AS), and provide Voltage Support, **if necessary**;
- Issuing Exceptional Dispatches (ED), making notifications and logging of ED in the Post-Day-Ahead timeframe (prior to Real-Time);
- Procurement and availability validation of Ancillary Services and makes reference to Ancillary Services that are not procured from resources that are out of service due to planned Outages.
- Procurement and availability of Ancillary Services.
- Identify and track metrics for continuing review and improvement, to increase confidence in overall market LMP quality and resulting Schedules (covering Energy, Ancillary Services, and RUC Capacity), and to identify and provide feedback on operational issues requiring policy level considerations.
- Suspend or intervene in the Day-Ahead Market.

A.2. Scope/Applicability

A.2.1. Background

The policy for the Day-Ahead Market can be found in the Business Practice Manual for Market Operations. The CAISO procures Regulation, Spinning Reserve, and Non-Spinning Reserve in the DAM and Real-Time Market (RTM), so that the total procurement meets or exceeds the WECC Operating Reserve Requirements and NERC Control Performance Standards. Ancillary Services are procured at the lowest overall cost, while maintaining the competitiveness of the markets.

RMR Units **may** be **manually** committed and dispatched by the CAISO to meet certain local area operating constraints, address local reliability issues, mitigate Congestion on non-competitive paths, meet shortfalls in the AS market, provide Voltage Support, or Supply needs that cannot be met solely by the available market resources.

The CAISO will make every effort to use ED only as necessary for conditions described in [Section C.3.1.2 Day-Ahead Exceptional Dispatch](#). During emergency operations, or when the CAISO is unable to maintain System Reliability by using resources available to the CAISO market, the CAISO is authorized by the CAISO Tariff to arrange ED for Energy transactions

*This document is controlled when viewed electronically.
When downloaded or printed, this document becomes UNCONTROLLED.*

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

with Scheduling Coordinators and Non-Scheduling Coordinators. This may include, but is not limited to, forced shut-downs or forced start-ups of Generation, Dynamic System Resources, and Participating Load. The CAISO may also enter into agreed upon transactions with Interchange Resources (Imports and Exports).

Note: A Day-Ahead RMR dispatch is not considered an Exceptional Dispatch; however, the ED tool is utilized. See [Section B.3 Day-Ahead Reliability Must Run Unit Commitment and Dispatch](#) for more details.

The CAISO intervenes in the operation of the Day-Ahead Market (DAM) if it is determined that such intervention is necessary to correct the Day-Ahead Market inputs to better align with Real-Time conditions. These interventions may occur on a Balancing Authority Area-wide basis or with respect to islanded portions of the Balancing Authority Area.

The CAISO does not intervene or suspend the operation of the Day-Ahead Market unless there has been a total or major collapse of all or part of the CAISO Controlled Grid and the CAISO is in the process of restoring it or if the CAISO anticipates that it will not publish DAM results for any reason.

Through a progressive process over a rolling three day period the Validation and Review Team attempts to validate the quality of market solutions for each day as necessary.

Primary daily objectives of the validation of the quality of market solutions for each day are:

- Validate the overall market run is correct and consistent.
- Review the feasibility of the market outcome and its reliability implications.
- Validate that outage topology is correctly depicted in the respective day's market model.
- Identify and validate Extra Long Start Unit Commitments.
- Identify and validate potential Non-RA Unit Commitments.
- Identify and validate expected Real-Time mitigation potential (including potential Exceptional Dispatches).

A.2.2. Scope/ Applicability

This procedure is applicable to

- The Day-Ahead Market activities,
- The commitment and Dispatch of RMR units in both the Day-Ahead and Real-Time,
- Cases where an Exceptional Dispatch is necessary prior to running the Day-Ahead Market,
- Procurement and availability of Ancillary Services,
- Day-Ahead Market suspension and intervention, and
- Validation of the quality of market solutions for each day.

*This document is controlled when viewed electronically.

Day-Ahead Market		Distribution Restriction: None

A.3. Day-Ahead Market Procedure Detail

A.3.1. Prior to DAM Close

A.3.1.1. Three (3) Days Out Results Review

Take the following actions to review the results of the three (3) days out power flow that was run the night before:

CAISO Generation Dispatcher / CAISO Market Operator / CAISO Day-Ahead Operations Engineer
<p><u>Between 0600 & 0900 PPT Three (3) Days Prior to the Operating Day</u></p> <ol style="list-style-type: none"> 1. Review the results of yesterday's D+3, D+2, and Day-Ahead (DA) for binding constraints that require resolution. 2. If any extremely Long-Start Commitment (ELC) is required, confirm that Bids are available: <ul style="list-style-type: none"> ▪ If Bids are necessary, notify the SC to submit appropriate Bids. 3. Review grid events that have taken place overnight that may require re-runs of power flows.

A.3.1.2. MOC Constraint

The following describes the Minimum On-line Commitment (MOC) constraint set-up process:

CAISO Generation Dispatcher / CAISO Market Operator / CAISO Manager of Real-Time Operations
<ol style="list-style-type: none"> 1. Determine if any MOC constraints need to be enforced for the current DAM (D+1), <u>Prior to 10:00 PPT:</u> <ul style="list-style-type: none"> ▪ If there are at least two (2) market resources defined in the MOC constraint, and there is enough RA, SR, RMR or previous CPM capacity to meet the MOC requirement, the MOC constraint may be created and utilized. ▪ If there are less than two (2) market resources defined in the MOC constraint, the MOC constraint may <u>not</u> be created and utilized. ▪ If there is not enough RA, SR, RMR, or previous CPM capacity to meet the MOC requirement, the MOC constraint may <u>not</u> be created and utilized unless additional capacity is made available through a change in unit status or an exceptional dispatch CPM is made for adequate capacity. <p>Note: RA substitutions must meet 06:00 DAM substitution requirements to count towards MOC capacity requirements.</p> 2. If there are MOC requirements that need to be enforced,

*This document is controlled when viewed electronically.
When downloaded or printed, this document becomes UNCONTROLLED.*

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

CAISO Generation Dispatcher / CAISO Market Operator / CAISO Manager of Real-Time Operations

- **Use** the applicable procedure or outage card to determine the requirement(s).
- **Enter** requirements into MOC display.

A.3.1.3. Manual ELC Process

The following describes the Extremely Long Start Commitment (ELC) determination process. This is a backstop manual process to the automated D+2 RUC commitment process:

CAISO Generation Dispatcher / CAISO Market Operator

Two (2) days prior to the Operating Day

1. **After** the power flow study run:
 - If an ELC unit is needed and the identified unit was offline:
 - **Place** a phone call to the SC and
 - **Inform** the SC that the unit needs to be started and available at its minimum Load for the indicated period of time.
 - If an ELC unit is needed and the identified unit was online or offline:
 - **Inform** the SC to place a Bid in SIBR for the indicated amount to at least cover the minimum up time.

Prior to 0900 PPT One (1) day prior to the Operating Day

1. **Verify** the following for the ELC units that were required to Start-Up yesterday for tomorrow:
 - They have Bids submitted in the DAM for the next day.
 - The unit has been manually placed in the ELC determination section of IFM for the indicated date/time and minimum Load MW.

See Section C.3 Day-Ahead Exceptional Dispatch for detail

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

A.3.1.4. RUC Bid Determination

The following describes the process of determining historical bid use for D+2 RUC:

CAISO Market Operator
<ol style="list-style-type: none"> 1. Consider using historical energy bids to commit resources in D+2, taking the following into consideration: <ul style="list-style-type: none"> ▪ Large differences in load forecast (i.e., holidays). ▪ Significant Outages in previous 7-days. ▪ Network Model or RA updates. ▪ Other reliability concerns. 2. If historical bids are determined necessary: <ul style="list-style-type: none"> ▪ Evaluate the historical bids in the previous 7-days. ▪ Select the applicable and reflective bid set to address the consideration. ▪ Make the adjustment.

A.3.1.5. Ancillary Services Determination

Take the following actions to determine the DAM Ancillary Services (AS) requirements after CFCD is published:

CAISO Market Operator
<ol style="list-style-type: none"> 1. Confirm all input parameters for the AS Requirements display. 2. Retrieve the Load Forecast and populate. 3. Check with the CAISO Manager of Real-Time Operations (or OE) for forecasted internal path transmission constraints, transmission Outages, or Generation limitations that render the AS undeliverable. 4. Determine if transmission constraints or Generation limitations exist: <ul style="list-style-type: none"> ▪ If there is a transmission constraint, prepare the AS Block Tool: <ul style="list-style-type: none"> ○ Identify the applicable Unit(s) associated with the constraint. ○ Limit each applicable Unit(s) AS product availability in the AS Block display. ○ Log the event in SLIC. ○ Post a System Operating Message on OASIS: <ul style="list-style-type: none"> ▪ <i>AS Blocking: "Based on historic patterns of power flows and transmission and Generation availability, the CAISO is forecasting congestion in the _____ area. As a result, the CAISO may be limiting or not awarding Ancillary Services to resources in that area. This restriction will be in effect for Operating date _____ from HE__ through HE__ for the DA/RT markets."</i>

*This document is controlled when viewed electronically.

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

CAISO Market Operator
<ul style="list-style-type: none"> • If there is a Generation limitation (that is not due to congestion), including air emissions, or Start-Up limitations: <ul style="list-style-type: none"> ○ If the limitation is provided by the Scheduling Coordinator, verify an approved outage card is on file: <ul style="list-style-type: none"> ▪ If not, refer the SC to create an Outage for proper recordation of the limitation. ○ If the limitation is brought by CAISO Operations Engineering Services, verify an approved outage card is on file: <ul style="list-style-type: none"> ▪ If not, refer CAISO Operations Engineering Services to create an Outage for proper recordation of the limitation. ○ If the limitation is brought by the CAISO Manager of Real-Time Operations, from the CAISO Generation Dispatcher, verify the approved outage card was provided by the CAISO Generation Dispatcher: <ul style="list-style-type: none"> ▪ If not, ensure the CAISO System Operator/CAISO Manager of Real-Time Operations obtains, and approves, a valid outage card. ○ The CAISO Market Operator will not incorporate a generation limitation into a Day-Ahead run <u>unless</u> the limitation has been properly reflected in an approved outage card. <ul style="list-style-type: none"> ▪ Outage card approval serves as notification to the Scheduling Coordinator of their unit's limitation. <p>See Section D.3 Ancillary Service Procurement and Availability Validation for details.</p>

A.3.1.6. Constraint Enforcement

The following describes the steps to determine if constraint enforcement is necessary:

CAISO Market Operator
<ol style="list-style-type: none"> 1. Determine if any constraint enforcement is necessary based on D+2 or D+3 studies. 2. Verify enforced contingency, flowgate and nomogram constraints in the market software. <p>See Section E.3 Pre-Market Validation for details.</p>

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

A.3.1.6.1. Return of Transmission prior to DAM Run

The following process describes the event where a transmission outage returns early to service prior to the DAM Run and after the D+2 power flow study:

CAISO Market Operator / CAISO Transmission Dispatcher
<p>1. If a transmission outage returns to service earlier than the scheduled outage end date, and there is <u>sufficient</u> time to make any necessary ETC updates and notifications per CAISO Operating Procedure 3640 Existing Transmission Contract Calculator Update, Section 2.2 Scope/Applicability:</p> <ul style="list-style-type: none"> ▪ Update the activation status of any associated Market elements (i.e., Nomogram, MOC, Contingency, Flowgate, Conformances) via OMS. ▪ Update the ETC limits. <p style="margin-left: 40px;"><i>Note: This is performed automatically via the ETC Calculator.</i></p> <ul style="list-style-type: none"> ▪ Send out an MNS message (CAISO Transmission Dispatcher). ▪ Execute the D1 run as normal. <p>2. If a transmission outage returns to service earlier than the scheduled outage end date, and there is <u>insufficient</u> time to make any necessary ETC updates and notifications per CAISO Operations Procedure 3640 Existing Transmission Contract Calculator Update, Section 2.2 Scope/Applicability:</p> <ul style="list-style-type: none"> ▪ Update the activation status of any associated Market elements (i.e., Nomogram, MOC, Contingency, Flowgate, Conformances) via OMS. <p style="margin-left: 40px;"><i>Note: The ETC Limits that will be utilized for the next Day-Ahead trade date are available in the OASIS Current Transmission Usage Report at 09:00. Note that any Real-Time changes to ETC limits to this report between the timeframe of 09:00 and Day-Ahead Market close (10:00) will not be utilized in Day-Ahead per Operations Procedure 3640 Existing Transmission Contract Calculator Update. After the Day-Ahead publishes, the ETC limits used in Day-Ahead will be available in the OASIS Transmission Usage Interface report.</i></p> <ul style="list-style-type: none"> ▪ Send out an MNS message (CAISO Transmission Dispatcher). <p style="margin-left: 40px;"><i>Note: While an ETC Limit may be changed between 09:00 and 10:00, it will not be included in the Day-Ahead market.</i></p> <ul style="list-style-type: none"> ▪ Execute the D1 run as normal.

A.3.1.7. Closing the DAM

The following describes the actions necessary to close the DAM:

CAISO Market Operator
<p>1. Verify the DAM closed automatically at 10:00 PPT (or as soon thereafter as possible).</p>

*This document is controlled when viewed electronically.
When downloaded or printed, this document becomes UNCONTROLLED.*

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

CAISO Market Operator
<p>2. If there is a disruption that prevents the DAM from closing on time:</p> <ul style="list-style-type: none"> ▪ Send out a market message to inform market participants that the DAM will close late. ▪ Consider closing the DAM as soon as possible by working with the Technical Team to resolve any issues. <p style="text-align: center;"><i>Note: The Market Operations BPM allows postponing the closing of the DAM for a maximum of two (2) hours in extreme cases.</i></p> <p>3. Transfer the DAM input data via the UI transfer input process.</p>

A.3.1.8. Suspending Convergence Bidding prior to closing the DAM

The CAISO has the authority to suspend Convergence Bidding when necessary per Tariff Section 7.9.3. This can be performed to bids already submitted or to bids that will be submitted in the future either at the PNode, Aggregated PNode or all PNodes level(s).

Suspending Convergence Bidding is considered a rare, last-resort action only performed where the inclusion of such Convergence Bidding risks:

- Sufficient Energy or Ancillary Service bids
- Process failure of bids
- Achieving alternating current (AC) solutions over an extended period of time
- Enforcement of natural gas constraint(s)
- Where not taking such action may affect System Reliability or grid operations

CAISO Director of Real-Time Operations, CAISO Manager of Real-Time Operations and CAISO Market Operator
<p>1. Confirm decision to limit or suspend Convergence Bidding by PNode, Aggregate PNode or all PNode levels.</p> <p>2. Update the status of the desired PNodes in the market as unable to accept Convergence Bids.</p> <p>3. Send out a market message to inform market participants that the DAM will not process Convergence Bids on desired PNode list.</p> <ul style="list-style-type: none"> ▪ Provide such notification in advance whenever practicable. <p style="text-align: center;"><i>Note: Per Tariff requirements, within two (2) business days the CAISO will provide information justifying the decision to suspend or limit Convergence Bidding.</i></p> <p>4. Execute the D1 run as normal.</p>

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

A.3.2. After the DAM Close

A.3.2.1. Run MPM

The DAM has been closed (see previous section). The following describes the steps to run the MPM process:

CAISO Market Operator
<ol style="list-style-type: none"> 1. After Clean Bids have been transferred: <ul style="list-style-type: none"> ▪ Review Unit Commitment Request and Validation document. ▪ Adjust <u>initial conditions</u> to reflect Exceptional Dispatch commitments issued after previous day results have been published. 2. Input MOC constraints and requirements into the market software. 3. After adjusting initial conditions, Execute MPM. 4. Review the output results. 5. Contact CAISO Operations Engineering Services for a Congestion verification after a review is complete. <ul style="list-style-type: none"> ▪ If output of the MPM is satisfactory (i.e. anticipated local reliability needs will be met), <ul style="list-style-type: none"> ○ Go to Section A.3.2.2 Run IFM, otherwise, notify the CAISO Manager of Real-Time Operations.

CAISO Generation Dispatcher / CAISO Market Operator
<ol style="list-style-type: none"> 1. If additional RMR commitments are necessary: <ul style="list-style-type: none"> ▪ Request approval from the CAISO Manager of Real-Time Operations to commit the RMR units. ▪ Create manual RMR commitments of the specified unit(s). ▪ Log this activity in SLIC. ▪ Re-Run the MPM. ▪ Go back to Section A.3.2.1 Run MPM.

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

A.3.2.2. Run IFM

The following describes the IFM process:

CAISO Market Operator
<ol style="list-style-type: none"> 1. Execute the IFM. 2. Determine if the IFM has run properly (i.e., look at the execution messages for errors and warnings): <ul style="list-style-type: none"> ▪ Review results: <ul style="list-style-type: none"> ○ If adjustments are necessary <u>and</u> the adjustments won't delay the IFM by more than approximately one hour: <ul style="list-style-type: none"> ▪ Make the adjustment. ▪ Re-run MPM, then IFM. ▪ Re-evaluate the results after finishing the MPM & IFM runs.

A.3.2.3. Run RUC

Take the following actions to make the necessary adjustments in the RUC process:

CAISO Market Operator
<ol style="list-style-type: none"> 1. Consider adjusting the RUC target adjustment as necessary, taking the following into consideration: <ul style="list-style-type: none"> ▪ Demand Response. ▪ Load Forecast errors – Risk Predictor. ▪ Fire dangers – Cal Fire and PTO updates. ▪ Weather changes – updated weather forecasts and PTO updates. ▪ Reliability Coordinator next-day analysis – from the RC. ▪ Potential loss of resources – test energy, update from PTOs, subsequent Outages. ▪ Stranded Capacity – potential for transmission Outages or overloads. ▪ Address Reliability Concerns or need for additional capacity “insurance” to cover the following Non-Summer Operational Risks: <ul style="list-style-type: none"> <input type="checkbox"/> Tighter Resource Adequacy (RA) Supply Margins as identified by the Assistance Energy Transfer (AET) Yellow System Conditions Alert email¹, including days where the CAISO opts-in to AET. <input type="checkbox"/> Weather Forecasts where additional Regulation is procured to cover Cloudy and other weather-related volatility.

¹ See Energy Imbalance Market BPM under Section 11.3.2 Resource Sufficiency Evaluation for details on the AET opt-in / opt-out criteria for the CAISO BAA.

Day-Ahead Market

Distribution Restriction: None

CAISO Market Operator

- West-Wide Grid impacts where the WEIM footprint is experiencing weather as designated by a Peak Outlook alert as extreme conditions within the 95-98th percentile of normal ranges.

Condition	Method	Percentile
Operational RA	Mosaic DA-FMM (max)	97.5%
Uncertain Forecast	Mosaic DA-FMM (max)	75%
West-Wide Grid Impacts	Mosaic DA-FMM (max)	97.5%

2. If a RUC modification is required for any reason (*Example: The net short to reflect Demand Curtailment available pursuant to a Demand Response Program*):

- **Insert** the appropriate values in the Manual Adjustment columns (MW or %) and the Reason from the list above into the RUC Net Short screen.
- Upon confirmation with the Manager of Real-Time Operations,
 - **Apply** the RUC Net Short **and execute** RUC.

Note: The RUC Adjustment values and reason are automatically published to OASIS.

CAISO Market Operator / CAISO Day-Ahead Operations Engineer / CAISO Manager of Real-Time Operations

1. **Evaluate** the RUC output.
2. If additional adjustments are necessary **and** the adjustments won't delay the IFM by more than one hour:
 - **Make** the adjustment.
 - **Re-run** MPM and IFM (if necessary).
 - **Re-evaluate** the results after finishing the MPM/IFM run/RUC runs.

CAISO Market Operator

1. **Evaluate** the DAM results for Overgeneration conditions:
 - If the possibility for Overgeneration exists, **at the 1530 meeting**,
 - **Discuss** the potential for and the estimated magnitude of, the Overgeneration in the CAISO Balancing Authority relevant to particular hour(s) of the Trading Day.
2. **Evaluate** the D+2 RUC commitments:

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

CAISO Market Operator
<ul style="list-style-type: none"> ▪ If the possibility for erroneous data inputs, changing system conditions, or reliability concerns exists: <ul style="list-style-type: none"> ○ Discuss adjusting D+2 RUC startup commitment(s). ○ Obtain an approval from the CAISO Manager of Real-Time Operations. ○ Make the adjustment. ○ Log the event in SLIC. <p>3. Verify DAM results are successfully published.</p>

CAISO Generation Dispatcher / CAISO Transmission Dispatcher / CAISO Market Operator / CAISO Day-Ahead Operations Engineer / CAISO Manager of Real-Time Operations
<ol style="list-style-type: none"> 1. Evaluate DAM results and plan and setup future market runs. 2. Run D+2 & D+3 Markets. <p style="margin-left: 20px;"><i>Note: The D+1 processes are complete at this point.</i></p> 3. Attend the 1530 Grid Ops meeting to discuss the results of the DAM and potential Exceptional Dispatches for RTM. 4. Consider the need to issue Exceptional Dispatches. <p style="margin-left: 20px;"><i>Note: This may be due to system, zonal, or local reasons including, but not limited to, any of the following:</i></p> <ul style="list-style-type: none"> ▪ <i>Load Forecast errors – Risk Predictor.</i> ▪ <i>Fire dangers – Cal Fire and PTO updates.</i> ▪ <i>Weather changes – updated weather forecasts and PTO updates.</i> ▪ <i>Reliability Coordinator next-day analysis – from the RC.</i> ▪ <i>Potential loss of resources – test energy, update from PTOs, subsequent Generation Outages.</i> ▪ <i>Actual or potential forced transmission Outages after the DAM closed.</i> ▪ <i>Stranded Capacity – potential for transmission Outages or overloads.</i> ▪ <i>Address reliability concerns.</i>

A.3.2.4. Market Disruption Process

The following describes the process for the CAISO Market Operator if during the execution of any market module (i.e., MPM, IFM, and RUC) a failure occurs requiring manual intervention.

CAISO Market Operator
<ol style="list-style-type: none"> 1. If a DAM module fails and is not able to complete,

*This document is controlled when viewed electronically.
When downloaded or printed, this document becomes UNCONTROLLED.*

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

CAISO Market Operator
<ul style="list-style-type: none"> • Inform the IT support groups of the Market Disruption and jointly investigate the cause of the failure. <p>2. Resolve the issue according to the cause of failure.</p> <p><i>Note: Market Operator actions may include but are not limited to removal of invalid Bids, (effectively making the resource non-participating in CAISO market), remodeling of incorrectly modeled outages, and coordinated fallback to backup servers.</i></p> <p>3. Re-run DAM module and continue with the normal DAM process.</p> <p>4. Create SLIC log for a Market Disruption that includes the cause of the failure, actions taken to resolve the issue, affected participants (if any) and communications made.</p> <p>5. If a market participant(s) is directly affected by the Market Disruption,</p> <ul style="list-style-type: none"> • Notify market participant(s) through proper communication channels (Market Notification System (MNS) phone). <p>6. In the event that a Bid is removed from a market run to mitigate Market Disruption, the CAISO Market Operator will:</p> <ul style="list-style-type: none"> • Notify the Scheduling Coordinator via phone call immediately, <u>or as soon as practicable, but no later than three (3) business days</u> after the applicable Bid was removed <u>and</u> • Will provide information specifying when its Bid was removed and the nature of the disruption. <p>See Section F.3 Day-Ahead Market Suspension and Intervention for details.</p>

A.3.2.5. D+2 & D+3 Determination

The following describes the process of running and reviewing the results of the two (2) day out power flow and running the three (3) day out power flow:

***Note:** the DAM processes should be complete at this point.*

CAISO Market Operator
<p>1. Run a D+2 power flow with Scheduled Outages included as needed.</p> <p>2. Review MPM results for the following:</p> <ul style="list-style-type: none"> ▪ Nomogram Constraints Static Data effect. ▪ Interconnection Constraints (ITCs). ▪ Contingency Constraints. ▪ Flowgate violations. ▪ Commitment of any ELC units.

A.3.2.6. Generator Decommitment

The following describes the actions for post IFM shutdown issues:

Scheduling Coordinator (SC)
<p>After Reviewing the post IFM/RUC Advisory Schedules, if there is a concern that a resource will not be able to meet its DA Schedule:</p> <ul style="list-style-type: none"> ▪ Contact the CAISO Generation Dispatcher. ▪ Request if the resource is required for system stability or reliability. ▪ Advise the CAISO of the SC's intent to continue to Bid the resource in RT or not submit Bids.

CAISO Generation Dispatcher
<ol style="list-style-type: none"> 1. If an SC has requested to shut down or reduce a resource due to a concern that the resource will not be able to meet its DA Schedule: <ul style="list-style-type: none"> ▪ Inform the SC if the resource is needed for system stability and/or reliability: <ul style="list-style-type: none"> ○ If the resource is required for reliability, <ul style="list-style-type: none"> ▪ Refer to CAISO Operating Procedure 2330 Real-Time Exceptional Dispatch to determine if the units should be Dispatched under that method. ○ If the resource is required for stability, as long as Bids will be provided, <ul style="list-style-type: none"> ▪ No operator action is required. 2. If IFM/RUC has issued an advisory Schedule that will shut down or limit the resource from meeting its minimum Start-Up/shut-down requirements: <ul style="list-style-type: none"> ▪ Consider issuing an Exceptional Dispatch. ▪ Refer to CAISO Operating Procedure 2330 Real-Time Exceptional Dispatch.

B.3 Day-Ahead Reliability Must Run Unit Commitment and Dispatch Procedure Detail

B.3.1. Energy Dispatching

B.3.1.1. Dispatch Philosophy

Manual RMR dispatch in the Day-Ahead is determined based upon next day power flow studies and two-day forward (D2) market results. RMR dispatch may be determined where:

1. Minimum Online Capacity (MOC) results in D2 indicate a local shortage of MWs required for voltage/thermal support,
2. D2 Power Flow results indicate an infeasibility based upon a shortage of available local market resources, or

		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

C.3 Day-Ahead Exceptional Dispatch Procedure Detail

C.3.1. Day-Ahead Exceptional Dispatch (ED)

The following provides guidance for issuing a Day-Ahead ED:

C.3.1.1. Description of an Exceptional Dispatch

An ED is a commitment or Dispatch Instruction by CAISO Operators that is not a result of the market optimization in the IFM, RUC or RTM. To the extent possible, the CAISO utilizes market solutions before issuing an ED.

C.3.1.2. Day-Ahead Exceptional Dispatch

Take the following actions to issue an Exceptional Dispatch prior to running the Day-Ahead Market:

CAISO Generation Dispatcher
<ol style="list-style-type: none"> 1. Prior to running the DAM, determine the need to Day-Ahead ED a resource for a reliability purpose. <ul style="list-style-type: none"> • Valid reasons for creating a Day-Ahead ED may include: <ul style="list-style-type: none"> ○ Where a Day-Ahead ED provides a more accurate Gas-Burn report, especially during gas limitations; ○ In support of a multi-day transmission outage requiring a single-resource online for congestion and reliability purposes; ○ A large resource may be given a Day-Ahead ED for capacity purposes, to ensure the resource is online and stable before a series of high-load summer days- • <u>After</u> the above considerations, if it is still determined that a resource should be required in the Day-Ahead solution, a Day-Ahead ED may be created. <p><i>Note: Any unit that was exceptionally dispatched in the Day-Ahead Market must be added to the RT ED Tool for the duration of the exceptional dispatch period (in some cases it may require adding it daily).</i></p> 2. Confirm with the Manager of Real-Time Operations and the Market Operator, any Day-Ahead ED required for reliability. 3. Confirm RA status and available RA MWs. <p><i>Note: If the exceptionally dispatched resource is a non-RA resource, an ED may trigger a CPM offer at PMin. If the CPM is accepted, then there will be a must offer obligation for the CPM amount.</i></p> 4. Inform the SC about the Exceptional Dispatch commitment and duration for CAISO Market Operator. 5. Utilizing the ED Tool, <ul style="list-style-type: none"> • Confirm RA status and available RA MWs.

*This document is controlled when viewed electronically.
When downloaded or printed, this document becomes UNCONTROLLED.*

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

CAISO Generation Dispatcher
<ul style="list-style-type: none"> • Create an Exceptional Dispatch <u>and</u> • Commit those resources that are required to meet the reliability requirements of the Balancing Authority Area. <p>6. Determine the code in 2330C Exceptional Dispatch Instruction Type Codes.</p> <p>7. To ensure proper settlement Start-up cost and Bid Cost Recovery (BCR), for all Exceptional Dispatches in either the Day-Ahead or Real-Time timeframe, the ED timeframe shall be entered as the maximum of either:</p> <ul style="list-style-type: none"> • ED timeframe length required for Operations and reliability needs; • The length of Minimum On line registered in the MasterFile.

CAISO Market Operator
<p>1. <u>Prior</u> to running the DAM, if a resource is needed for reliability and is not an ELC resource awarded during the D+2 market run (or during the 48 hour or 72 hour RUC run), then;</p> <ul style="list-style-type: none"> • Confirm with the Generation Dispatcher the resource and timing requirements. • Match RT Exceptional Dispatch created in the RT ED Tool. • For ELC in Day-Ahead, <ul style="list-style-type: none"> ○ Refer to CAISO Desktop Procedure RTM-004 Day-Ahead ED Guide and Logging Instructions. <p>2. If after the DAM published, additional capacity is required to meet reliability is needed,</p> <ul style="list-style-type: none"> • Refer to CAISO Operating Procedure 2330 Real-Time Exceptional Dispatch. <p>3. For any resources that were issued ED commitments after the DAM published,</p> <ul style="list-style-type: none"> • Set initial conditions for the next trade day for the applicable instruction time periods of the ED commitments. <ul style="list-style-type: none"> ○ For any Test Energy ED's where the Constraint Type = "Test," the initial conditions are NOT set for the next trade date. ○ After the completion of RUC, review the results. <p>4. Log the event and indicate this was a Day-Ahead ED.</p>

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4

Day-Ahead Market		Distribution Restriction: None

C.3.1.3. ED using SLIC Logging

The following describes SLIC logging for ED:

CAISO Market Operator
<p><u>SLIC Log Entry</u></p> <ol style="list-style-type: none"> 1. <u>Log Type</u> – Day-Ahead Desk 2. <u>Title</u> - Extra Long Start Commitments (ELC) <i>Note: Do not utilize the “EDE Instructions for Generators/Corrections-96 hour” log type for Settlement purposes.</i> 3. <u>Res Type</u> - Generator 4. <u>BA</u> - Select BA Name from drop-down list 5. <u>Resource</u> - Select Resource from drop-down list 6. <u>Event DTS</u> - Date and Time to reflect the effective start date and time of the Exceptional Dispatch 7. <u>Contact DTS</u> - Date and Time to reflect the effective start date and time of the Exceptional Dispatch 8. <u>Contact Name</u> - Manager of Real-Time Operations or Generation Dispatcher Contact name 9. <u>Short Description</u> - Enter “DA ED for “<i>resource name</i>” 10. <u>Operating Date</u> - Exceptional Dispatch Energy operational date 11. <u>Instruction Type</u> - Select the EDE instruction type from operating procedure 2330C Exceptional Dispatch Instruction Type Codes. 12. <u>Reason</u> - Select drop-down reason such as “Unit Commitment – Transmission Outage.” 13. <u>Other Reason</u> - Type “DA ED” 14. <u>GOTO MW</u> - Type GOTO MWS (absolute value) 15. <u>Start Verbal Dispatch</u> - Type EDE timing (Hour) 16. <u>End Verbal Dispatch</u> - Type EDE end of Dispatch (Hour) 17. <u>Constraint Type</u> - Select “Minimum” for PMin, or Fixed or Maximum. 18. <u>Text</u> – Type “DA ED for <i>resource name</i>” and any other pertinent details.

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

C.3.1.4. Energy, Reserves and Congestion Mitigation

The following describes dispatching of Energy, reserves, and Congestion management.

Reason	Dispatch Description
Energy	<ul style="list-style-type: none"> RA, partial RA, non-RA, or CPM unit Capacity dispatched as Energy in RT is done through the market application (RTM). Other dispatches are through ED should be done through the MED tool to achieve an effective economic solution.
Congestion Mitigation	<ul style="list-style-type: none"> All resources can be dispatched through the market application as required for Congestion Mitigation. Capacity with an effectiveness factor or determined effective by Operating Engineer (OE) study can be dispatched as needed through Exceptional Dispatch for Congestion Mitigation outside of the market applications economically utilizing the MED tool.

C.3.1.5. Economic Considerations

The following describes the economic considerations that should be considered before issuing an ED:

- Units that have been awarded a Day-Ahead RUC or a Spin/Non Spin Schedule.
- For a unit getting the standard CPM rate of \$55,000/MW-year, each MW of CPM designation will cost \$4,583 per month.
- A unit electing Supplemental Revenues (SR) and bidding \$1,000/MWh can earn its revenue cap in approximately 7-10 hours, depending on its Default Energy Bid (DEB). However, the revenue cap is set by the CPM rate and the available MWs of the unit. Hence, an SR unit can, in principle, earn no more than an equally sized CPM resource.
- A unit's SR cap is set by its PMax. So, an SR unit that is twice the size of a unit electing the CPM compensation can earn approximately double in Supplemental Revenues (SR) what the CPM unit can earn in CPM payments. This requires the SR unit to be Exceptionally Dispatched above PMin for sufficient hours, in order to earn that additional revenue (7-10hrs).
- An SR unit's Bids can be updated hourly. Therefore, the Bid for one hour may not be an indication of what the cost of the SR unit will be in the next hour. Assume that any SR unit that is subject to ED will increase its Bid in the subsequent hour, where possible.
- All ED to non-RA units with CPM election should be reviewed for upcoming Scheduled Outages during the 30 day period.
- Units with RA < PMin are treated as RA = PMin.

*This document is controlled when viewed electronically.
When downloaded or printed, this document becomes UNCONTROLLED.*

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

- Units electing SR and Committed at PMin receive no Supplemental Revenues until dispatched above PMin. Units electing CPM get paid a Capacity payment.
- Generally, commitment of SR resources is cost effective for smaller units and resources required near their PMin for most hours during the 30 day period.

D.3 Ancillary Service Procurement and Availability Validation Procedure Detail

D.3.1. Contingency Reserve (Operating Reserve - Spinning & Operating Reserve - Supplemental)

The following describes the steps that are taken to meet the NERC Contingency reserve requirements and Control Performance Standards:

Sufficient Contingency reserves are procured in the Day-Ahead Market (DAM) to meet 100% of the Contingency reserve Ancillary Service (AS) requirement associated with the CFCD to satisfy Current NERC Standards. If additional Contingency reserves are necessary after the DAM then the additional contingency reserves are purchased through the RTM. The Contingency reserve requirement is calculated by taking the greater of the:

- Most Severe Single Contingency (MSSC)
 - This requirement refers to the hourly MSSC determination which may include loss of the largest online generator (e.g., Diablo), loss of import schedules across one transmission service (e.g., PDCI), or the loss numerous generating resources connected via a RAS scheme or single transmission line.
- The sum of three percent of hourly integrated Load (generation minus station service minus net actual Interchange) plus three percent of hourly integrated generation (generation minus station service).
 - For Day-Ahead procurement purposes, the three percent Load plus three percent Generation NERC requirement may be substituted with a larger percentage value, based upon the load forecast and greater than or equal to 6.0 percent of the Day-Ahead load forecast.
- Online Photovoltaic Solar
 - This requirement is based upon the loss of some solar resources with earlier-based inverters in certain voltage fluctuation situations. Based upon the studied and observed occurrences, this AS procurement target may be equal to or greater than 15% of the hourly sum of all the solar resources at-risk forecast.

Day-Ahead and D+2 AS requirements are posted on [OASIS](#) under Ancillary Services.

Note: *Dynamic imports and pseudo tie imports are included with hourly integrated generation.*

Minimum and/or maximum AS limits may also be determined for each/any AS Region.

*This document is controlled when viewed electronically.
When downloaded or printed, this document becomes UNCONTROLLED.*

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

Consider one or more of the following factors:

- Path Contingency de-ratings (example: loss of Path 26),
- Path OTCs,
- Largest single Contingency (on-line Generating Unit or in-service transmission),
- Forecasted path flows, and
- Other anticipated local operating conditions for Load and/or Generation.

CAISO Generation Dispatcher / CAISO Market Operator / CAISO Manager of Real-Time Operations
<p>1. If it is necessary for the CAISO to establish a procurement limit or change a procurement limit for an AS Region:</p> <ul style="list-style-type: none"> • Provide a Market Notice by 6:00 PM two days ahead of the operating day, whenever practicable. <p><i>Note: Change will only be posted on OASIS and no market notice will be sent if it is less than two days prior to Real-Time.</i></p>

D.3.2. Regulating Reserves

Sufficient Generating Units are required to immediately respond to Automatic Generation Control (AGC) in the CAISO Balancing Area for a continuous balance between resources and Demand. The following provides information for meeting the requirements for NERC Control Performance Standards:

Regulation procurement is Dynamic and may be adjusted daily or hourly by the CAISO Manager of Real-Time Operations or the CAISO Generation Dispatcher. Due to operating variances or system conditions, it may be necessary to adjust the procurement amount higher or lower.

Min/Max: A target between 300 - 400 MW each for regulation procurement, for reg up and reg down, ensures adequate response to ACE deviations; however, this target can be lowered or raised if it is determined that system conditions require it. The purpose of this limit is to help accommodate additional regulation procured through the co-optimization of AS. The regulation limit would hold our upward regulation procured as “Contingency reserve” in reserve to be released by the Generation Dispatcher during a Contingency or other operating event that would require the Dispatch of Contingency reserves.

Adjust regulation requirements during the Operating Day to support any modifications to:

- The CAISO Load Forecast and Forecast deviations,
- Prior day’s system Loads,
- RMR Dispatch Instructions, or

		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

- Previous day, week or month performance or Real-Time System Conditions, Interchange and Generation Schedule change magnitude.

D.3.3. Ancillary Service Regions

AS may be procured regionally in the following regions:

AS regions are posted on OASIS. If the AS region is changed more than two days prior to Real-Time then the CAISO will post a Market Notice clarifying the changes. If the change is made less than two days prior to Real-Time then the change will only be posted on OASIS and no market notice will be sent.

	AS Region Name	Description of AS Region (set of resources included in AS Region)		AS Region Status
		Internal CAISO Control Area	Intertie Resources (Current Scheduling Points)	
1	<i>Expanded System</i>	All internal Generators	All	Active
2	<i>System</i>	All internal Generators	None	Active
3	<i>South of Path 15</i>	All Generation residing South of Path 15	None	Active
4	<i>Expanded South of Path 15</i>	All Generators residing South of Path 15	NW3, SR3, NV3, NV4, AZ2, AZ3, AZ5, LC1, LC2, LC3, MX, LA1, LA2, LA3, LA4, LA7	Active
5	<i>South of Path 26</i>	All Generators residing South of Path 26	None	Active
6	<i>Expanded South of Path 26</i>	All Generators residing South of Path 26	NW3, SR3, NV3, NV4, AZ2, AZ3, AZ5, LC1, LC2, LC3, MX, LA1, LA2, LA3, LA4, LA7	Active
7	<i>North of Path 15</i>	All Generators residing North of Path 15	None	Active
8	<i>Expanded North of Path 15</i>	All Generators residing North of Path 15	NW1, NW2, SR5, SR2, SMUD, TID	Active
9	<i>North of Path 26</i>	All Generators residing North of Path 26	None	Active
10	<i>Expanded North of Path 26</i>	All Generators residing North of Path 26	NW1, NW2, SR5, SR2, SMUD, TID	Active

		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

D.3.4. Planned Outages

Planned resource Outages are tracked to help determine AS availability through the following methods:

Scheduling Coordinator (SC) / Participating Generator (PG)
<ol style="list-style-type: none"> Submit to the CAISO Operations Planning Department, each quarter, Schedules of planned Outages for each resource for the next 12-month period. Contact the CAISO Operations Planning Department with any changes to the quarterly Schedule to ensure correct timelines.

CAISO Operations Planning
<p>Note: <i>Planned Outages are automatically updated in the Outage Scheduler based on the quarterly Outage information or recent updates to the annual planned Outage Schedule as recorded in the outage management system.</i></p> <ol style="list-style-type: none"> Conduct periodic verification of the submitted planned Outage timelines with the SCs/Participating Generators.

D.3.5. Forced Outages

Forced resource Outages are tracked to help determine AS availability through the following methods:

Scheduling Coordinator (SC) / Participating Generator (PG)
<ol style="list-style-type: none"> If a resource is forced out-of-service, <ul style="list-style-type: none"> Inform the CAISO Generation Dispatcher by submitting an Outage Request via the outage management system interface.

CAISO Generation Dispatcher
<ol style="list-style-type: none"> If monitoring indicates that a resource has separated from the system <u>and</u> an Outage Request or a phone call is <u>not</u> received from the SC or Participating Generator, <ul style="list-style-type: none"> Contact the responsible party to determine if the separation is due to a Forced Outage.

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

CAISO Generation Dispatcher / Scheduling Coordinator (SC) / Participating Generator (PG)
<p>1. Create a record in the outage management system for resources that are forced out-of-service. The record includes the following information:</p> <ul style="list-style-type: none"> • Resource, • SC/Participating Generator, • Amount of resource unavailable, • Time the resource is unavailable, • Estimated time of return, • Time the resource was available, and • Reported cause. <p><i>Note: The Outage Scheduler is automatically updated to reflect the time duration of the Forced Outage whenever an outage management record is initiated. The Outage Scheduler is updated to reflect the return of the resource at such time when the SC declares the resource available when the outage management record is updated. Out-of-service Resources are blocked from Day-Ahead AS procurement. Outages submitted after the Day-Ahead Market Close will not be reflected in the next trade date.</i></p>

E.3 Pre-Market Validation Procedure Detail

E.3.1. 08:00 Daily Meeting

The 08:00 Meeting includes the following:

CAISO Manager of Real-Time Operations
<p>1. Capture issues and constraints not previously identified from the previous Operating Day's actual results, including mitigation actions required, Exceptional Dispatches and Unit Commitments.</p>

CAISO Day-Ahead Operations Engineer
<p>1. Review Outages added or removed since the previous day's reports <u>and</u></p> <p>2. Provide reports of Outages including updates to the outage management system, generation requirements, active Nomograms, contingencies, and transmission corridor or path de-rates for the next day.</p>

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

CAISO Validation and Review Team									
1. Review unexplained binding constraints for today's Day-Ahead Market (DAM). 2. Consider yesterday's D+2 and RUC Binding Commitments. 3. Review historical and current unexplained binding constraints including the following:									
<table border="1" style="width: 100%;"> <thead> <tr style="background-color: #e0e0e0;"> <th style="width: 30%;">Concern</th> <th>Possible Actions</th> </tr> </thead> <tbody> <tr> <td>Market Activity</td> <td>Verify constraints are consistent with expectations.</td> </tr> <tr> <td>Flowgates, Contingencies, Nomograms</td> <td>Get the list from CAISO Operations Planning Engineer for all Flowgates, Contingencies, and Nomograms to be un-enforced in the DAM run.</td> </tr> <tr> <td>Infeasible solutions</td> <td>Report any infeasible solution to the Validation and Review Lead for possible resolution before proceeding with the market run.</td> </tr> </tbody> </table>	Concern	Possible Actions	Market Activity	Verify constraints are consistent with expectations.	Flowgates, Contingencies, Nomograms	Get the list from CAISO Operations Planning Engineer for all Flowgates, Contingencies, and Nomograms to be un-enforced in the DAM run.	Infeasible solutions	Report any infeasible solution to the Validation and Review Lead for possible resolution before proceeding with the market run.	
Concern	Possible Actions								
Market Activity	Verify constraints are consistent with expectations.								
Flowgates, Contingencies, Nomograms	Get the list from CAISO Operations Planning Engineer for all Flowgates, Contingencies, and Nomograms to be un-enforced in the DAM run.								
Infeasible solutions	Report any infeasible solution to the Validation and Review Lead for possible resolution before proceeding with the market run.								
4. Flag out all listed items to be un-enforced, before running the DAM and after transferring the input. 5. Take appropriate action based on stated objectives in Section A.2.1 Background . 6. Record all issues and actions in the SLIC Log. <i>Note: Enforced Contingency restraints and binding restraints are posted on the CAISO website.</i>									

E.3.2. Day-Ahead Market

Take the following actions during the Day-Ahead Market (DAM) run:

CAISO Validation and Review Team
1. Remain available to address issues or concerns that arise during the DAM runs. 2. Review the DAM results (considering inputs from previous reviews of D2 and D3 runs, etc.). <ul style="list-style-type: none"> • After reviewing the DAM results, <ul style="list-style-type: none"> ○ If the Validation and Review Team determines the constraint is correct, <ul style="list-style-type: none"> ▪ Obtain the Validation and Review Lead's approval. ▪ Publish DAM Results. ○ If the Validation and Review Team determines the constraint is unexplained and should be un-enforced for the market run and time allows for the DAM to be re-run, <ul style="list-style-type: none"> ▪ Un-enforce the element that is causing the constraint, <u>and</u> ▪ Re-run the applicable portion of the market.

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

CAISO Validation and Review Team
<ul style="list-style-type: none"> ▪ Log the following in SLIC: <ul style="list-style-type: none"> – Duration, if any, – Element that was un-enforced, – Reason, <u>and</u> – Any available additional information (i.e., ticket information). ○ If the CAISO Market Quality and Validation Team determines the constraint is unexplained but will be unable to determine cause in a timeframe that will allow the DAM to be re-run, <ul style="list-style-type: none"> ▪ Publish DAM noting the unexplained prices that may be subject to change after the fact. <p>3. Address urgent issues relative to the Real-Time Market as required by the Validation and Review Lead or System Operations Management.</p>

E.3.3. 15:30 Daily Meeting

The 15:30 meeting includes the following:

CAISO Manager of Real-Time Operations
<p>1. Identify ongoing mitigation issues, Unit Commitments and, Exceptional Dispatches.</p>

CAISO Day-Ahead Operations Engineer
<p>1. Review the following and provide reports of Outages for the next 1-4 days (providing day-of-the-week information is available):</p> <ul style="list-style-type: none"> • No Call Outages approved for the period under review, • Outages which have impact on market and State Estimator models, • Outages added or removed since previous days reports, • Updates to: <ul style="list-style-type: none"> ○ Outage management system, ○ Generation requirements, ○ Nomograms and contingencies required, and ○ Transmission Corridor or Path derates.

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

CAISO Market Operator

1. Discuss the following:

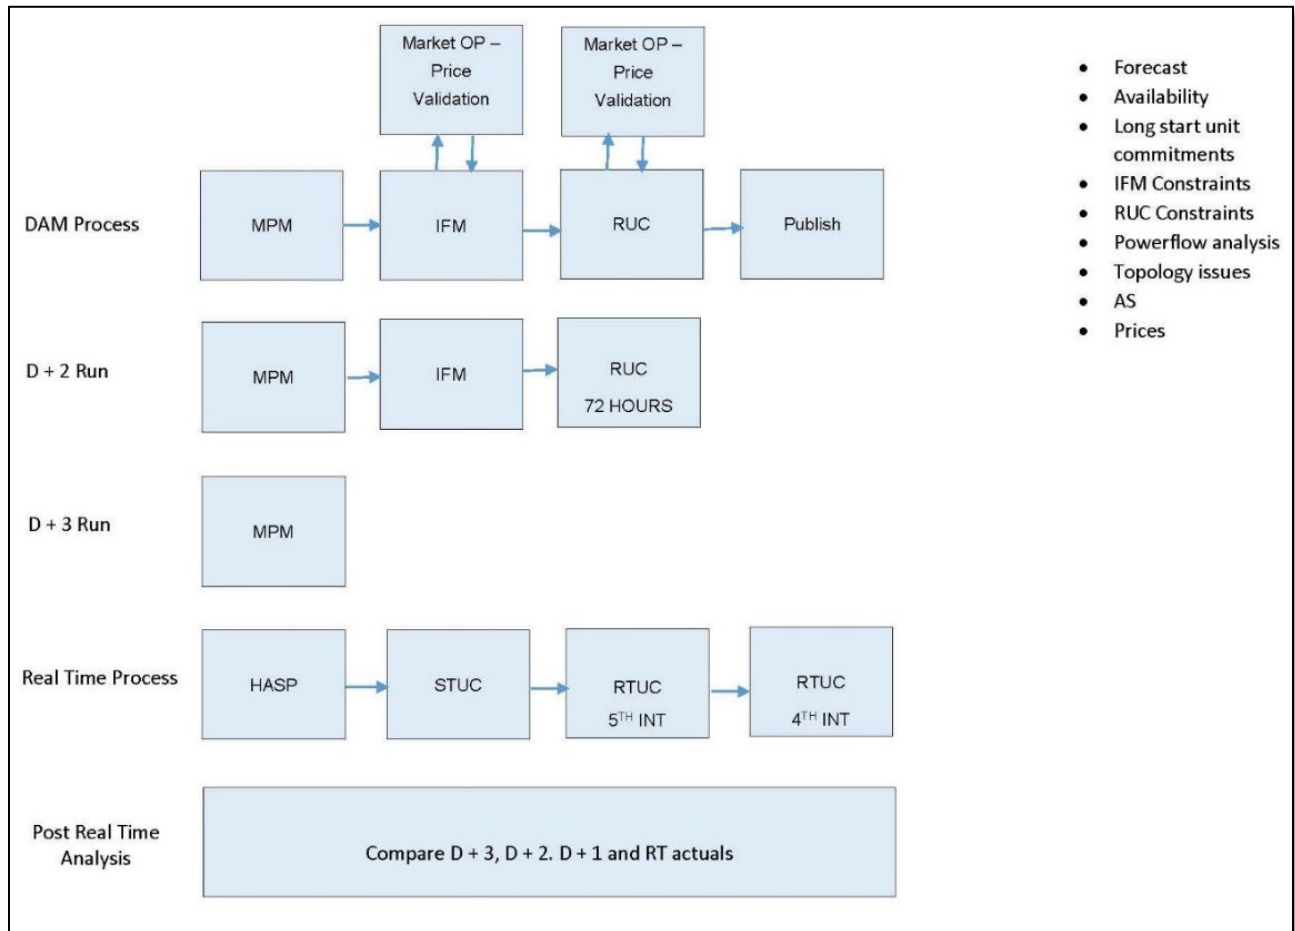

- Binding constraints from of Day-Ahead (DA) results.
- Any immediate issues from DA results just published.
- Units committed in D+1 through the Market based on different procedures (i.e., CAISO Operating Procedures [7820 San Diego Area](#), [7630 Orange County Area Requirements](#), [6510 SCIT](#), etc.).
- Any possible additional Unit Commitments or Exceptional Dispatches due to reliability requirements.
- Any possible ELC unit(s) needed.

F.3 Day-Ahead Market Suspension and Intervention Procedure Detail

F.3.1. Day-Ahead Market Suspension or Intervention

By 1800, take the following actions to notify Market Participants of the state of the Day-Ahead Market.

CAISO Director of Real-Time Operations, CAISO Manager of Real-Time Operations

1. In the event the CAISO has not published the Day-Ahead Market results by 1800:
 - **Determine** if the CAISO will be able to publish the Day-Ahead Market, or if it is feasible to publish the previous day's Day-Ahead Market results, or if it is necessary to suspend the publication of any Day-Ahead Market results.
 - If it is determined that the CAISO will be able to publish the Day-Ahead Market results:
 - **Instruct** the Market Operator to notify Market Participants, via MNS, that the CAISO intends to publish the Day-Ahead Market results, and the time the publication is expected to occur.
 - If it is determined that the CAISO will publish the previous day's Day-Ahead Market results:
 - **Instruct** the Market Operator to notify Market Participants, via MNS, that the CAISO has suspended the Day-Ahead Market and will publish the previous day's Day-Ahead Market results, pursuant to Tariff Section 7.7.9(b)(1)(A).
 - **Contact** MES and instruct them to publish the previous day's Day-Ahead Market results.
 - If it is determined that the CAISO is **unable** to publish any Day-Ahead Market results, but will instead request Market Participants to follow the previous day's Day-Ahead Market results, pursuant to Tariff Section 7.7.9(b)(1)(A):
 - **Instruct** the Market Operator to notify Market Participants, via MNS, that the CAISO is unable to publish any Day-Ahead Market results, and request all Market Participants to follow the previous day's Day-Ahead Market results.
 - If it is determined the CAISO will suspend the publication of any Day-Ahead Market results:
 - **Instruct** the Market Operator to notify Market Participants, via MNS, that the CAISO has suspended the Day-Ahead Market, will not publish any Day-Ahead Market results, and will rely on the use of Exceptional Dispatch and other manual instructions and on the Real-Time Market results, pursuant to Tariff Section 7.7.9(b)(1)(B).
 - **Contact** MES and **notify** them that no Day-Ahead Market results will be published.

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

CAISO Market Operator
<ol style="list-style-type: none"> 1. If the CAISO Manager of Real-Time Operations or the CAISO Director of Real-Time Operations has determined the CAISO will publish the Day-Ahead Market results: <ul style="list-style-type: none"> • Notify Market Participants, via MNS, <u>and</u> • Indicate the CAISO intends to publish the Day-Ahead Market results and the time the publication is expected to occur. <ul style="list-style-type: none"> ○ Use the notice template in Section F.3.2 MNS Notice Templates. 2. If the CAISO Manager of Real-Time Operations or the CAISO Director of Real-Time Operations has determined the CAISO is unable to publish any Day-Ahead Market results, but will instead request Market Participants to follow the previous day's Day-Ahead Market results, pursuant to Tariff Section 7.7.9(b)(1)(A): <ul style="list-style-type: none"> • Notify Market Participants, via MNS, indicating the CAISO is unable to publish any Day-Ahead Market results and requests all Market Participants to follow the previous day's Day-Ahead Market results. <ul style="list-style-type: none"> ○ Use the notice template in Section F.3.2 MNS Notice Templates. 3. If the CAISO Manager of Real-Time Operations or the CAISO Director of Real-Time Operations has determined the CAISO will suspend the Day-Ahead Market and publish the previous day's Day-Ahead Market results instead: <ul style="list-style-type: none"> • Notify Market Participants, via MNS, and indicate that the CAISO has suspended the Day-Ahead Market and will publish the previous day's Day-Ahead Market results, pursuant to Tariff Section 7.7.9(b)(1)(A). <ul style="list-style-type: none"> ○ Use the notice template in Section F.3.2 MNS Notice Templates. 4. Definitions

Unless the context otherwise indicates, any word or expression defined in the Master Definitions Supplement to the CAISO Tariff shall have that meaning when capitalized in this Operating Procedure.

The following additional terms are capitalized in this Operating Procedure when used as defined below:

AS	Ancillary Services
-----------	--------------------

*This document is controlled when viewed electronically.
When downloaded or printed, this document becomes UNCONTROLLED.*

 California ISO	Operating Procedure	Procedure No. 1210
		Version No. 19.4
		Effective Date 1/01/24
Day-Ahead Market		Distribution Restriction: None

Availability	<p>Measured in MW, it is the maximum quantity of Energy or AS (measured at the point of delivery) the Unit is capable of producing at any given time (assuming adequate time to ramp to that maximum quantity).</p> <p>Sufficient availability of usable water is assumed when determining the availability of hydroelectric facilities.</p>
CFCD	Cal ISO Forecast Cal ISO Demand
CMRI	Customer Market Results Interface
CPM	<p>Capacity Procurement Mechanism. The CPM enables the CAISO to acquire Generation capacity through Exceptional Dispatches to:</p> <p>(1) Maintain grid reliability if Load Serving Entities fail to meet Resource Adequacy requirements;</p> <p>(2) Procured Resource Adequacy Resources are insufficient;</p> <p>(3) Unexpected conditions, i.e., significant events, create the need for additional capacity. The CPM replaces the Interim Capacity Procurement Mechanism</p>
DA	Day-Ahead
DAM	Day-Ahead Market
Dynamic System Resource	A System Resource that has satisfied the CAISO's contractual and operational requirements for submitting a Dynamic Schedule, and for which a Dynamic Schedule has been submitted, including a Dynamic Resource-Specific System Resource.
ED	Exceptional Dispatch
EDE	Exceptional Dispatch Energy
ELC	Extremely Long-Start Commitment
Exceptional Dispatch	A Dispatch Instruction issued outside of the market applications for reliability purposes specified in Section 34.9 of the CAISO Tariff. Energy from Exceptional Dispatches does not set the LMP at the applicable PNode.
HASP	Hour-Ahead Scheduling Process
IFM	Integrated Forward Market
MED	Manual Economic Dispatch
NQC	Net Qualified Capacity
OE	Operations Engineer
PPT	Pacific Prevailing Time (PST or PDT as applicable)
RA	Resource Adequacy – a resource that is designated in a Supply Plan to provide RA Capacity. The criteria for determining the types of resources that are eligible to provide Qualifying Capacity may be established by the CPUC or other applicable Local Regulatory Authority and provided to the CAISO.

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

Real-Time Operations Management Team	Balancing Authority Operations Manager; Manager, Market Operations Coordination; Sr. Advisor – Market Operations; Director Real-Time Operations; and VP, Operations (or their designated representative).
RR	Reliability Requirement (RR) capacity is the sum of RA and ICPM capacity and is required to be offered to the CAISO.
RT	Real-Time
RTM	Real-Time Market
RUC	Residual Unit Commitment
SIBR	Scheduling Infrastructure Business Rules
Spinning Reserves	The portion of unloaded synchronized Generating Capacity, controlled by the CAISO, which is capable of being loaded in ten (10) minutes, and which is capable of running for at least two hours.
SR	<p>Supplemental Revenue. Bid-based Energy payments that are not subject to the same Bid mitigation rules as other units dispatched under Exceptional Dispatch (or those dispatched through the CAISO markets), but subject to a cap on the supplemental revenues that can be earned by a resource.</p> <p>It equals the higher of: (1) the Energy Bid price minus the Default Energy Bid or (2) Resource Specific Settlement Interval Locational Marginal Price minus the Default Energy Bid for Exceptional Dispatches subject to bid mitigation pursuant to CAISO Tariff Section 39.10.</p>
Synchronous Condenser	A Unit that is electrically connected to the CAISO Controlled Grid or Distribution Grid to provide AS in circumstances where the generator is not producing Energy.
System Unit	One or more individual Generating Units and/or Loads within a Metered Subsystem controlled so as to simulate a single resource with specified performance characteristics, as mutually determined and agreed to by the MSS Operator and the CAISO. The Generating Units and/or Loads making up a System Unit must be in close physical proximity to each other such that the operation of the resources comprising the System Unit does not result in significant difference in flows on the CAISO Controlled Grid.
Voltage Support	<p>An Ancillary Service required for maintaining normal operating conditions to prevent transmission lines and transformers from overloading.</p> <p>Units not under contract as Synchronous Condensers may also be called to raise or lower their Energy output to fulfill Voltage Support needs.</p>

Version History

Version	Change	Date
18.0	<p>Combined procedure that includes 1210, 1310, 1320, 1330, 1340, 1610, and 1710 procedures.</p> <p>Sections A.2.1 and A.2.2: Minor updates.</p> <p>Section A.3.2.4: Minor update.</p> <p>Section D.3.1: Added detail and clarification on reasons for a Day-Ahead ED. Added the requirement to back the Day-Ahead ED (ELC record) with a Real-Time ED.</p> <p>Section E.3.5: Minor change to note.</p> <p>Replaced A/S with AS.</p> <p>Replaced Peak RC with RC.</p> <p>Format and grammar updates throughout.</p>	12/11/18
18.1	Section A.3.1.7.1, Step 1 & 2, updates for ETCC tool replacement.	1/17/19
18.2	Section D.3.1.2: Added new Step 8.	4/01/19
18.3	<p>Added distinction between RMR and Legacy RMR.</p> <p>Minor format and grammar updates.</p> <p>Removed version history prior to 5 years.</p>	1/01/20
18.4	<p>Updated message in Section A.3.1.6 Ancillary Services Determination as a result of market participants' enquiries.</p> <p>Replaced ISO Director, System Operations with ISO Director, Real-Time Operations. Updated Real-Time Operations Management Team roles in Definitions Section.</p> <p>Updated various section references throughout.</p> <p>Removed "and the RC" from Operationally Affected Parties.</p> <p>Removed version history prior to 5-years.</p> <p>Minor format and grammar updates.</p>	10/08/20
18.5	<p>Updated references of ISO to CAISO.</p> <p>Section B.3.1.1: Clarified between Legacy and Non-Legacy RMR Manual Dispatch.</p> <p>Section B.3.1.2: Removed most content (Retired Day-Ahead EverBridge dispatch process for Condition 1 RMR with MOO, as it is no longer in use) and included with Section B.3.1.1.</p> <p>Section B.3.1.3: Removed this section of Real-Time activities from this Day-Ahead procedure (See 2310 for Real-Time activities).</p> <p>Minor format and grammar updates.</p>	2/12/21
18.6	<p>Added Section A.3.1.9 on suspending Convergence Bidding.</p> <p>References: Updated NERC Standard BAL-005 reference.</p> <p>Removed history prior to five years.</p>	12/10/21
18.7	Periodic Review: No changes.	2/10/22
18.8	Added details to the RUC Net Short process.	6/01/22

 California ISO	Operating Procedure	Procedure No.	1210
		Version No.	19.4
		Effective Date	1/01/24
Day-Ahead Market		Distribution Restriction: None	

Version	Change	Date
18.9	Removed 50% spin procurement requirement in Section E.3.1. Under the prior standards, at least 50% of contingency reserves had to be Spinning Reserves. WECC has eliminated the requirement that a Balancing Authority maintain at least 50% of its contingency reserves as Spinning Reserve. Minor edit to procedure reference in Section B.3.1.1.	4/01/23
19.0	Section G.3.1: Removed Step 1 for Emergency Response Coordinator notification.	6/09/23
19.1	Renamed RTMO and Day-Ahead Market Operator to Market Operator, Generation Desk to Generation Dispatcher, Transmission Desk to Transmission Dispatcher, and Shift Manger Desk to Shift Manager. Updated reference link for desktop procedure RTM-004 (Internal only).	9/05/23
19.2	Replaced Shift Manager with Manager, Real-Time Operations and Manager of Real-Time Operations.	9/14/23
19.3	Updates for RUC Net Short criterion, which includes Operation RA, Uncertain weather and West-Wide Grid Impacts	
19.4	Removed Legacy RMR concepts and steps throughout and renumbered accordingly. Removed history prior to five years.	1/01/24

3. Periodic Review Procedure

Review Criteria & Incorporation of Changes

There are no specific criteria for reviewing or changing this document, follow instructions in CAISO Operating Procedure 5510.

Frequency

Every three (3) Years

Appendix 1: Day-Ahead Market Flowchart
