Purpose

The Purpose of this procedure is to coordinate with the applicable Natural Gas Transmission Pipeline System Operator concerning gas limitations imposed on generation resources that occur in both Day-Ahead and/or Real-Time timeframes, to ensure both gas and electric reliability to the extent possible.

This procedure outlines the steps taken when there is a natural gas reduction or insufficiency in a region, requiring curtailment of multiple generator resources consistent with the gas company’s Tariff as interpreted by the gas company.
## 1. Responsibilities

| Gas Transmission Operator (GTO) | • Communicates with CAISO Operations Planning or Real-Time Operations to provide the same information as well as availability of gas supply to the extent known.  
• Communicates with the impacted generators the gas limitations per the gas company tariff.  
• Communicates to the impacted generators the end of the gas limitations. |
| Generator Operator (GOP) | • Informs its Scheduling Coordinator of Curtailment/Outage and supply insufficiency information received from Gas Transmission Operator.  
• Requests Generation Outages as required due to impacts of curtailment. |
| Scheduling Coordinator (SC) | • Informs the CAISO about generating resources affected by natural gas curtailments.  
• Works with the CAISO Generation Dispatcher to determine if a generation output pattern is necessary due to new gas limitations. |
| CAISO Manager, Real-Time Operations | Directs timely and appropriate Real-Time actions necessary to ensure reliable operation of the CAISO Controlled Grid and Balancing Authority Area. |
| CAISO Market Operator | Reviews market results to determine potential curtailment effects by performing the following:  
• Reviews yesterday’s Day-Ahead Market (DAM), D+2, and D+3 results.  
• Reviews actual Load and forecasts.  
• Determines whether any Minimum Online Capacity (MOC) constraint needs to be enforced.  
• Runs Extremely Long-Start Commitment Process (ELC) to determine ELC commitment.  
• Determines whether any constraint enforcement is necessary.  
• Verifies DAM closed automatically.  
• Evaluates output of Residual Unit Commitment (RUC) process.  
• Evaluates DAM results.  
• Runs Market Power Mitigation model (MPM), Integrated Forward Market model (IFM), and RUC.  
• Runs power flow studies with Scheduled Outages and curtailments. |
### CAISO Generation Dispatcher
- Works with the Scheduling Coordinator if a different generation output pattern is necessary due to new gas limitations.
- Reviews and approves instructions from Real-Time Market (RTM) and sends instructions to Market Participants via Automated Dispatch System (ADS).
- Logs all compliance issues.
- Ensures RTM model runs at the designated intervals.
- Dispatches resources with Exceptional Dispatch as requested by the Manager of Real-Time Operations.
- Constrains resources as required for reliability purposes.
- Sends Market Notification (Market Notification System (MNS) and ADS) market messages as required.
- Utilizes RTM/Exceptional Dispatch to modify resources in RTM.
- Adjusts RTM (as needed) for proper Dispatching.

### CAISO Operations Planning Engineer
In the Operations Planning time horizon, evaluates potential for planned reductions or outages to natural gas supply and impact on reliability impact to Bulk Electric System operation with the following activities:
- Confirms receipt of requests for electric generation and transmission Outages and provides notice of rejection, approval, and other communications.
- Analyzes outages for impacts to reliable operations of the Bulk Electric System.
- Evaluates potential reductions or outages to natural gas supply, providing input on what impact an event may have on reliable Bulk Electric System operation.
- Create transmission outage card to notify RMOE potential Gas Nomogram activation and create Gas Nomogram curtailment in SMDM for planned gas pipeline limitations.

### CAISO System Operator
- Participate in and coordinate event reporting and notification of gas curtailment events that can impact the operation of the Day-Ahead and Real-Time Markets and reliability of the grid.

### CAISO Reliability and Market Operations Engineer (RMOE)
- Performs operations engineering studies to support reliable operations.
- Performs contingency analysis in Day-Ahead (DA) and Real-Time (RT) as required and makes recommendations regarding outage plans and unit commitment requirements.
- Considers critical variables and requirements that System Operations needs for planning and mitigating grid conditions.
- Activates Gas Nomograms created by CAISO Operations Planning for inclusion in Day-Ahead and Real-Time markets as applicable for trade dates confirmed by the gas company.
2. **Scope/Applicability**

2.1 **Background**

Maintenance (planned gas transmission outages and curtailments, gas pressure reductions, etc.) of natural gas infrastructure systems required for reliable operation of the California ISO (CAISO) Controlled Grid shall be coordinated between Gas Transmission Operators, CAISO Operations Planning, and CAISO System Operations, especially when actions or events may impact electric system reliability.

Natural gas transmission pipelines are not subject to the jurisdiction or authority of the CAISO, but are primarily regulated by state and/or federal regulatory agencies. Therefore, Natural Gas Transmission Pipeline System Operator (Gas Transmission Operator) cooperation with these procedures is voluntary, does not operate as a waiver or consent to CAISO jurisdiction, and may be limited by or subject to compliance with state and/or federal agency rules and regulations. Information shared between the Natural Gas Transmission Pipeline System Operator and the CAISO in accordance with any Non-Disclosure Agreement (NDA) shall be governed by the NDA.

2.2 **Scope/Applicability**

Gas and electric operations coordination is critical to electric grid reliability and to the natural gas supply infrastructure due to the support provided by electric generation fueled by gas. Outages of the gas transmission system may occur with advance notice (e.g., tests), or without advance notice (e.g., leaks, dig-ins).

Such systems include but are not limited to natural gas pipelines that have California power plants as end-users:

- Pacific Gas and Electric Company (PGAE)
- El Paso Gas Co. (Mojave Pipeline)
- Southern California Gas Company (So Cal Gas)
- Kern River Gas Transmission

Under normal circumstances, the Generator Operator or Scheduling Coordinator is responsible for notifying the CAISO about these types of supply Outages. In the case of a larger natural gas constraint or Outage, the Gas Transmission Operator will be engaged to actively coordinate Outage planning and project communication. Maintenance and Operations of supporting infrastructure systems required for reliable operation of the CAISO Controlled Grid and Balancing Authority Area should be coordinated with either CAISO Operations Planning (Operations Planning Horizon) or CAISO System Operations (Real-Time Operations Horizon) when fuel supply, inventory concerns, actions or events may affect electric system reliability.
3. Procedure Detail

3.1 General Information

Each day, the CAISO makes available to each Natural Gas Transmission Pipeline System Operator, two Estimated Gas Usage reports. The first when D+1 is completed, and the second when D+2 is completed. The estimated gas usage reports provide hourly and daily totals for each Natural Gas Transmission Pipeline System Operator entity for the areas they specify. Unit level hourly and daily estimated gas usage details supporting these reports is available to the Natural Gas Transmission Pipeline System Operator upon demand subject to terms of the executed NDA.

These Estimated Gas Usage reports are the basis of any potential gas curtailment events covered by this operating procedure. For that reason, this operating procedure cannot be in effect, with regard to gas curtailments covered in Section 3.4, as to a given trading day until the CAISO has provided the D+2 Estimated Gas Usage report for that trading day to the Natural Gas Transmission Pipeline System Operator. These reports may also be used to establish the basis for the gas limitations implemented through use of the gas nomogram covered in Section 3.2.

Time is of the essence during any potential gas curtailment events and reliability of the gas and electric systems are top priority. As such, the CAISO and the Natural Gas Transmission Pipeline System Operator shall ensure all curtailment calculations are completed and communications occur as expeditiously as possible. Should the integrity of the gas or electric system be at imminent risk, both Operators shall take whatever means necessary to safeguard system reliability.

Nothing in this procedure limits the authority of the CAISO to take actions authorized by its FERC-accepted Tariff, as the CAISO deems necessary in its sole discretion, to ensure the safe and reliable operation of the electric grid.

3.2 Natural Gas Limitations Using Gas Nomogram in So Cal Gas Service Area

This section applies to So Cal Gas for natural gas Limitations with advance or immediate notice. This may occur either before or after the gas day begins. This section only applies to scenarios using the Gas Nomogram to manage applicable gas pipeline limitation.

3.2.1 Gas Nomogram Notice Options

Option 1: If there is a planned gas outage Limitation submitted before D+4 and posted in the ENVOY system, continue to Section 3.2.1.1 Option 1: Advance Notice.
Gas Transmission Pipeline System Limitations or Outages

Operating Procedure

<table>

Option 2: If there is a gas outage Limitations submitted after D+4, skip to Section 3.2.1.2

Option 2: Immediate Notice.

Each of these options continues on to Activation in Section 3.2.1.3.

3.2.1.1 Option 1: Advance Notice

If there is a planned gas outage submitted before D+4 and posted in the ENVOY system, the following steps are used to coordinate:

**SoCalGas System Operator**

1. **Notify** the CAISO in weekly planning coordination calls as soon as known but not later than four (4) calendar days prior to the operating day:
   - **Specify** if this is a Limitation.
   - **Specify** the gas zone(s) and/or specific generation resource(s) affected.
   - **Specify** the limitation in terms of maximum MMcfd or percent limitation relative to the DA-2 or Day-Ahead Gas Burn Report values and whether the limitation must be a fixed volume per hour or per day.
   - **Specify** date with begin and end times of limitation period.

   *Note: Typically, the Day-Ahead Nomogram is activated for all 24-hours, as any hours not included in the Nomogram will allow the Day-Ahead to award gas resources with no gas constraints. The nomogram may be applied to specific periods with starting and ending hours for scenarios where the gas system limitation is only applicable during the corresponding period.*

2. **Log into** SMDM and **select** Gas Burn option under nomogram.

3. **Create** day-ahead and real-time curtailment.
   - **Refer** to OES Desktop Procedure OEP-049 for detailed instructions.

**Operations Planning Engineer (OEP)**

1. **Consider** the outage in outage study case.
   - If it is feasible, **OEP creates** a transmission outage card in WebOMS
2. **Add** the Gas outage information into external note section and
3. **Add** an instruction for RMOE in the market notes of the market impact panel regarding Gas nomogram impacts and the specific gas limitation.
   - **Log into** SMDM and **select** Gas Burn option under nomogram.
4. **Create** day-ahead and real-time curtailment.
   - **Refer** to OES Desktop Procedure OEP-049 for detailed instructions.

Continue to Section 3.2.1.3 Activation.
3.2.1.2 Option 2: Immediate Notice

If gas outages submitted after D+4, the following steps are used to coordinate:

---

**SoCal Gas System Operator**

1. **Notify** the CAISO Manager of Real-Time Operations and provide the following information as soon as known:
   - **Specify** if this is a Curtailment Watch or Limitation.
   - **Specify** the gas zone(s) and/or specific generation resource(s) affected.
   - **Specify** the limitation in terms of maximum MMcfd or percent limitation relative to the DA-2 or Day-Ahead Gas Burn Report values and whether the limitation must be a fixed volume per hour or per day.
   - **Specify** date with begin and end times of limitation period.

   **Note:** Gas pipeline limitation affecting only one generator should be handled by instructing generator to enter fuel limitation outage.

---

**CAISO Manager of Real-Time Operations**

1. **Confirm** with SoCal Gas, Curtailment Watch or Limitation, which zone(s) and/or specific generation resources will be impacted, the required limitation amount in MMcfd or percent limitation and the expected duration.

---

**Reliability and Market Operations Engineer (RMOE)**

1. **Consider** the outage in outage study case.
   - If it is feasible, OEP creates a transmission outage card in WebOMS.
2. **Add** the Gas outage information into external note section and
3. **Add** an instruction for RMOE in the market notes of the market impact panel regarding Gas nomogram impacts and the specific gas limitation.
4. **Log into** SMDM and **select** Gas Burn option under nomogram.
5. **Create** day-ahead and real-time curtailment.
6. **Refer** to OES Desktop Procedure OEP-049 for detailed instructions.

---

3.2.1.3 Activation

---

**Reliability and Market Operations Engineer (RMOE)**

1. **Activate** the Gas Nomogram:
   - **Open** SMDM Gas Burn tab
   - **Review** limitation to ensure grid reliability is maintained.
### Reliability and Market Operations Engineer (RMOE)
- Notify CAISO Manager of Real-Time Operations of review and necessary adjustments to maintain reliability and activate nomogram.
  - Utilize three part communication with Manager of Real-Time Operations to confirm all nomogram parameters.

### CAISO Manager of Real-Time Operations
1. After SoCalGas has issued their notice,
   - Issue the appropriate Market Notification via MNS (Day-Ahead and Real-Time) and ADS (Real-Time only) Message.*
2. Evaluate system conditions for Restricted Maintenance Operations per CAISO Operating Procedure 4420 System Emergency.
3. Notify the RC and advise them of the following information when using either Gas Curtailment Tool or Gas Nomogram Tool:
   - Duration, amount of limitation and impacted zone(s) or specific generation resource(s).
   - Duration and they may see increased generation in their gas service area:
     - Kern River Gas Company
     - El Paso Gas Co. (Mojave Pipeline)
     - Pacific Gas and Electric Natural Gas Operations

*Note*: See Section 3.6 Market Notification (MNS and ADS) Scripts.

### CAISO Generation Desk
1. Monitor generator output to ensure resource(s) are dispatched in accordance with any fuel availability reductions and in a manner that meets system reliability needs.
2. If the Generator Operator or SC determine new hourly gas burn modifications are necessary or desired,
   - Contact SoCalGas System Operator (or representative) for their approval.

### SoCal Gas System Operator
1. Notify affected Generating Station(s) of Gas Nomogram activation and potential impact to market dispatches.

### Generator Operator (GOP)
1. Notify Scheduling Coordinator of Gas Nomogram activation and potential impact to market dispatches.
### Gas Transmission Pipeline System Limitations or Outages

**Distribution Restriction:** None

---

#### Scheduling Coordinator (SC)

1. **Follow** CAISO dispatch instructions.

---

#### 3.3 Reduction/Outage Implementation for all Gas Transmission Operators

This section applies to a natural gas reduction or insufficiency requiring a curtailment of scheduled gas volumes with advance or immediate notice where the gas system limitation or scheduled gas reduction impacts one or few Generator Operators rather than a defined gas curtailment zone.

Applicable to the following Gas Companies:

1. Pacific Gas and Electric Company (PGAE)
2. El Paso Gas Co. (Mojave Pipeline)
3. Southern California Gas Company (So Cal Gas)
4. Kern River Gas Transmission

---

#### Gas Transmission Operator (GTO)

1. **Contact** each affected end-use customer (Generator Operator) with information on the natural gas curtailment and maximum daily or hourly gas consumption limit.

2. **Notify** the CAISO of impacts to end-use customers that include one or more generators, as appropriate to coordinate outage planning per CAISO Operating Procedure 3220 Generation Outages, which may include but is not limited to:
   - Which Generating Units will be affected
   - Degree of impact
   - Reduction/outage start date and time, and end date and time

3. If reduction/shortage is anticipated one (1) to two (2) days in advance, **Notify** the CAISO Manager of Real-Time Operations by telephone.

4. **Communicate** any gas issues with the CAISO and other affected Gas Transmission Operators as early as possible.
### Gas Transmission Pipeline System Limitations or Outages

</tr>
</tbody>
</table>

#### CAISO Market Operator

| 1. If anticipating an increase in unit commitments for the next day, |
| - **Notify** the Manager of Real-Time Operations to contact the impacted Gas Transmission Operators and advise them of forecasted increase in demand for supply. |
| - **Communicate** any gas issues between the CAISO and each Gas Transmission Operator as early as possible. |
| **Note:** In addition, consider a peak day call mechanism to alert market participants. |

#### CAISO Manager of Real-Time Operations

| 1. **Consider Implementing** restricted maintenance operations per CAISO Operating Procedure [4420 System Emergency]. |
| **Note:** The specific actions and the order of the actions taken may vary due to system conditions as well as the impacts of natural gas supply issues. |

#### CAISO Reliability and Market Operations Engineer (RMOE)

| 1. **Study** and analyze the constraints that show up in Real-Time study tools due to gas curtailment: |
| - **Consider** path and transfer capabilities and limitations for procurement of energy and Contingency Reserves. |
### CAISO Reliability and Market Operations Engineer (RMOE)

- If appropriate, refer to applicable Bulk and/or Regional procedures for studied operating scenarios and requirements.
- Prepare market contingencies, nomograms and displays as appropriate.

2. If the gas curtailment will go beyond the current day,
   - provide input regarding forecast gas burn and gas requirements and adjustments for the Day-Ahead Market, as applicable, to Manager of Real-Time Operations, Day-Ahead RMOE and appropriate operators which may include:
     - Planned Generating Units online
     - Day-Ahead schedule
     - Adjustments needed to maintain reliability and gas fuel curtailments
     - Units’ commitments needed for reliability
     - Generating Units' commitments needed for reliability

### CAISO System Operator

1. Continue to coordinate planning and communications prior to and throughout reduction/outage implementation timeframe.

### 3.4 Gas System Curtailment Implementation in Defined Gas Transmission Zone

This section applies to a natural gas reduction or insufficiency requiring a pro rata curtailment in a defined gas transmission zone with advance or immediate notice. This may occur either before or after the gas day begins whenever a pro-rata reduction is required for end-use customers in the define zone. The section is applicable to the following Gas Companies:

- Pacific Gas and Electric Company (PGAE)
- Kern River Gas Transmission
- Southern California Gas Company (SoCal Gas)

Whenever possible, use of the Gas Nomogram process as defined in Section 3.2 is preferred over of the manual curtailment steps in this Section 3.4 for limitations applicable to gas transmission zones; however, nomogram use is only applicable to SoCal Gas and there may be cases where the Gas Nomogram use is not possible for SoCal Gas. In all cases, the initiation of this section is at the request of the Gas System Operator.

### Gas Transmission Operator (GTO)

1. Notify the CAISO and provide the following information
   - Specify if this is a Curtailment.
   - Specify the gas zone(s) and/or specific generation resource(s) affected.
   - Specify the MMcf/d reduction.

---

This document is controlled when viewed electronically. When downloaded or printed, this document becomes UNCONTROLLED.
Gas Transmission Operator (GTO)

- Specify date and begin and end time of limitation period.

CAISO Manager of Real-Time Operations

1. Confirm with Gas Transmission Operator, Curtailment, which zone(s), the required reduction amount in MMcfd and the date with begin and end time of the curtailment period.
2. If Gas Curtailment Tool will be utilized and start time of limitation is < 2 hour notice,
   - Calculate pro-rata reduction of schedules, necessary to reduce the zone(s) or resource(s) by the required MMcfd and convert to MW.
   - Review pro-rata results with RMOE to ensure grid reliability is maintained.
   - Notify Gas Transmission Operator via email with a follow-up phone call.
   - Verify that Gas Transmission Operator will notify affected generating plants.
3. If Gas Curtailment Tool will be utilized and start time of limitation is > 2 hour notice,
   - Calculate pro-rata reduction of schedules, necessary to reduce the zone(s) or specific generation resource(s) by the required MMcfd and convert to MW.
     - For a limitation prior to the start of the Day-Ahead or in Real-Time,
       - Use the specific generation resource(s) hourly MMcf values from the estimated gas burn report.
     - Review pro-rata results with RMOE to ensure grid reliability is maintained.
   - Verify that Gas Transmission Operator will notify affected generating plants.

Gas Transmission Operator (GTO)

1. Notify each affected end-use customer (Generator Operator) with information on the natural gas curtailment to provide the maximum daily and/or hourly gas consumption limits in MMcfh/MMcfd for the curtailment period.
2. Communicate any gas issues with the CAISO and other affected Gas Transmission Operators as early as possible.

CAISO Manager of Real-Time Operations

1. If Gas Curtailment Tool will be utilized and start time of limitation is < 2 hour notice,
   - Exceptional Dispatch impacted generation resources to their new MW value for impacted time frame:
     - Use ED Code SYSEMR.
2. Adjust and reallocate limitations as necessary.*
3. After Gas Transmission Operator has issued their notice,
   - Issue the appropriate Market Notification via MNS (Day-Ahead and Real-Time) and ADS (Real-Time only) Message.**
CAISO Manager of Real-Time Operations

4. Evaluate system conditions for Restricted Maintenance Operations per CAISO Operating Procedure 4420 System Emergency.

5. Notify the RC and advise them of the following information when using either Gas Curtailment Tool:
   - Duration, amount of limitation and impacted zone(s) or specific generation resource(s).
   - Duration and they may see increased generation in their gas service area:
     - Kern River Gas Company
     - El Paso Gas Co. (Mojave Pipeline)
     - Pacific Gas and Electric Natural Gas Operations
     - Southern California Gas Company (SoCal Gas)

*Reference CAISO Operating Procedure 2330C Exceptional Dispatch Instruction Type Codes.

**See Section 3.6 Market Notification (MNS and ADS) Scripts.

Scheduling Coordinator (SC)

1. If Gas Transmission Operator provides a new hourly gas burn for a specific resource(s):
   - Submit outage information for each generating unit to meet total generating station new hourly gas burn via CAISO’s Outage management system.

   Note: Outages must be submitted for the duration of the anticipated gas limitation.

   The “Ambient Not Due to Temp” nature of work may not be used until the CAISO Generation Dispatcher has provided a Market Notification Message advising that Operating Procedure 4120 has been invoked.

CAISO Generation Dispatcher

1. Review and approve outage cards.

2. Monitor generator output to ensure unit is dispatched in accordance with any fuel availability reductions and in a manner that meets system reliability needs.
   - If needed, such as the Gas Transmission Operator is unable to issue instructions to Generation Operators in time, issue an Exceptional Dispatch to meet reliability needs.

3. Depending on system conditions and/or OEP/RMOE studies,
   - Consider potential for increasing generating unit(s) above its WebOMS limitation:

   Note: Actual increase requires additional actions following.
CAISO Generation Dispatcher

- Calculate the additional MMcfh necessary. (Using Gas Curtailment Tool).
- Contact Gas Transmission Operator to ensure additional gas burn can be accommodated:
  - Request Gas Transmission Operator to adjust the plant level gas burn to allow for additional calculated MMcfh.
- Contact applicable Generator SCs to confirm Gas Transmission Operator has communicated available gas to adjust WebOMS availability to reflect revised fuel availability.

4. Communicate any gas issues between the CAISO and each Gas Transmission Operator as early as possible.

Note: In addition, consider a peak day call mechanism to alert market participants.

Gas Transmission Operator (GTO)

1. Notify Generator Operator with newly adjusted hourly gas burn.

CAISO Generation Desk

1. Notify the Scheduling Coordinator of the generating unit output adjustment.

Scheduling Coordinator (SC)

1. Adjust WebOMS outage card for the affected generating unit(s) accordingly.
   - Reference CAISO Operating Procedure 3220 Generation Outages.

CAISO Generation Desk

1. Monitor generator output to ensure resource(s) are dispatched in accordance with any fuel availability reductions and in a manner that meets system reliability needs.

3.5 Recovering from Natural Gas Reduction or Insufficiency

Take the following actions when Natural Gas Transmission Pipeline System Operator has notified affected Generator Operators that gas limitations are no longer in effect.

CAISO Generation Dispatcher, CAISO Manager of Real-Time Operations

1. Review reliability impacts of returning generating units to schedule in coordination with the Natural Gas Transmission Pipeline System Operator.
### CAISO Generation Dispatcher, CAISO Manager of Real-Time Operations

2. **Notify** CAISO Generation Desk of anticipated return to normal system operations.
3. **Notify** the RC.
4. **Notify** other potentially impacted Natural Gas Transmission Pipeline System Operators as applicable, such as:
   - Kern River Gas Company,
   - El Paso Co. (Mojave Pipeline),
   - Pacific Gas and Electric Natural Gas Operations, **and/or**
   - SoCal Gas System Operator.

### Gas Transmission Operator (GTO)

1. **Notify** electric generation resources impacted by the fuel limitation that the fuel limitation has been lifted.

### Scheduling Coordinator (SC)

1. **Adjust** OMS outage card for the affected generating unit(s) accordingly.

### CAISO Generation Desk

1. **Approve** OMS cards and **allow** generating units to return to their schedules.
2. **Utilize** exceptional dispatches as necessary to maintain system reliability while returning to normal system operations.
3. **Make** all necessary Market Notifications (MNS and ADS).

### 3.6 Market Notification (MNS and ADS) Scripts

The following are sample Market Notification (MNS and ADS) messages to consider when sending a market message to participants through MNS and ADS.

*Applicable to So Cal Gas Only for use in conjunction with gas nomogram activation in Section 3.2 of this procedure.*

For more information, refer to the documents posted at [www.caiso.com](http://www.caiso.com) under Stakeholder Processes > Aliso Canyon Gas-Electric Coordination.

**Note:** To the extent that the SoCalGas System Operator is willing to assist in providing the “description of aggregate outage area”, the Manager of Real-Time Operations should consult and consider their proposal for wording. Examples of a “broad description outage area” are “San Diego” or “SP 15.”
### Potential Gas Nomogram Limitation

In the advance (before Day-Ahead Market) or immediate (Day-Ahead or Real-Time) notice options, if SoCalGas has declared a Curtailment Watch or Gas Pipeline limitation, consider sending the following message:

*The California ISO (CAISO) and Southern California Gas Company are coordinating to ensure the most efficient use of available natural gas supply for electric generation.*

To facilitate this coordination, the CAISO will be enforcing electric generation limits for Generating Units within [XX] zone(s) for trade date [MM/DD]. The CAISO anticipates these limits to be in effect from HE [XX] through HE [XX]. To help mitigate impacts to electric system reliability, the CAISO may be enforcing a Gas Nomogram per CAISO Operating Procedure 4120 Gas Transmission Pipeline System Limitations or Outages and may be issuing additional notices as needed.

Maximum conservation efforts are encouraged for the time period specified in this notice.

*Please monitor the CAISO System Conditions Website for more information.*

---

**Applicable to all during Natural gas limitation or curtailment for a defined transmission zone pursuant to Section 3.4.**

### Curtailment Requiring Exceptional Dispatch

In the event that a Gas Transmission Operator has issued a Curtailment which requires a CAISO response, consider sending the following message:

*Per CAISO Operating Procedure 4120 Gas Transmission Pipeline System Limitations or Outages, the California ISO (CAISO) has confirmed with [insert Gas Transmission Operator] that a gas delivery system curtailment is currently impacting [XX] zone(s).*

To mitigate impacts to electric system reliability, the CAISO will be utilizing Exceptional Dispatch to reposition the affected electrical generation for up to [XX] hours from the time of this notice.

Maximum conservation efforts are encouraged for the time period specified in this notice. The CAISO may issue additional notices as needed. Please monitor the CAISO System Conditions Website for more information.
Gas Transmission Pipeline System Limitations or Outages

### Potential Gas Curtailment > 2 Hours’ Notice

In the event that with [insert Gas Transmission Operator] has issued a Curtailment with greater than 2 hours’ notice, consider sending the following message:

With [insert Gas Transmission Operator] notifying specific electric generators that a gas supply limitation is expected to impact [XX] zone for trade date [MM/ DD from HEXX through HEXX].

To help mitigate impacts to electric system reliability, per CAISO Operating Procedure 4120 Gas Transmission Pipeline System Limitations or Outages, [insert Gas Transmission Operator] may be issuing a curtailment.

The CAISO requires all impacted units to update their electric generation availability using an Outage Management System (OMS) Ambient Not Due To Temperature derate card. Ancillary Service will be procured outside of the impacted area(s).

Maximum conservation efforts are encouraged for the time period specified in this notice. The CAISO may issue additional notices as needed. Please monitor the CAISO System Conditions Website for more information.

### Immediate Gas Curtailment < 2 Hours’ Notice

In the event that [insert Gas Transmission Operator] has issued a Curtailment in Real-Time which requires an immediate CAISO response, consider sending the following message:

Per CAISO Operating Procedure 4120 Gas Transmission Pipeline System Limitations or Outages, the California ISO (CAISO) has confirmed with [insert Gas Transmission Operator] that a gas delivery system limitation is currently impacting [XX] zone(s) through HE [XX].

To mitigate impacts to electric system reliability, the CAISO may be utilizing Exceptional Dispatch to reposition the affected electrical generation for up to [XX] hours from the time of this notice, or until the generators receive an updated available gas limitation from [insert Gas Transmission Operator], whichever comes first.

Once new gas burn amounts are received, electric generators are expected to update their electric generation availability using an Outage Management System (OMS) Ambient Not Due To Temperature derate card. Ancillary Service will be procured outside of the impacted area(s).

Maximum conservation efforts are encouraged for the time period specified in this notice. The CAISO may issue additional notices as needed.

Please monitor the CAISO System Conditions Website for more information.
Emergency Due to Gas Limitation

In the event that all of the above mitigating actions have been taken, and further actions are required to maintain system stability, refer to CAISO Operating Procedure 4420 System Emergency and consider sending the following message:

Due to gas supply limitations in the [xx] zone, the California ISO (CAISO) anticipates the need to interrupt firm load for the period [Start Date], [Start Time] through [End Date], [End Time] in the amount of [MW amount] MW for each respective hour based on system conditions as of [Notice Post Date].

Maximum conservation efforts are encouraged for the time period specified in this notice. Utility Distribution Companies and Metered Subsystems await further Operating Instructions from the CAISO.

The CAISO will issue a notice when the load interruptions have actually begun or are imminent.

Please monitor the CAISO System Conditions Website for more information.

Recovery

When recovering from natural gas limitation, consider sending the following message:

For [HE ____], the CAISO expects the imposed fuel limitations to be lifted and requests Market Participants resume normal operation.

4. Supporting Information

Operationally Affected Parties

Shared with the Public.

**Definitions**

Unless the context otherwise indicates, any word or expression defined in the Master Definitions Supplement to the CAISO Tariff shall have that meaning when capitalized in this Operating Procedure.

The following additional terms are capitalized in this Operating Procedure when used as defined below:

<table>
<thead>
<tr>
<th>Curtailment</th>
<th>For SoCal Gas, as defined in SoCalGas Tariff, Rule 23 and SGDE Gas Rule 14, Utility initiated suspension of natural gas service. Utility may temporarily reduce the quantity of gas it will transport or deliver, or may terminate service entirely for certain service categories, as needed for operational requirements. For PGAE and Kern River Gas Transmission Company, as defined in respective tariffs.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Curtailment Watch</td>
<td>For So Cal Gas system, a public notice posted to Envoy to advise customers of the potential for a curtailment based on the forecast and system conditions. Not all curtailment watches become an actual curtailment event.</td>
</tr>
<tr>
<td>DCPA</td>
<td>Dynamic Competitive Path Assessment</td>
</tr>
<tr>
<td>Limitation</td>
<td>Can define all of the following: Daily Imbalance, Limited Imbalance tolerance, System Imbalance, Daily Gas imbalance, Imbalance limitation, Gas constraint, Imbalance tolerance, Gas system limitation, Gas burn constraint, Gas curtailments, Capacity reduction limitations, Restricted system limitations, Gas burn limitation. For So Cal Gas, such limitations may be enforced using gas nomogram per Section 3.2.</td>

5. Periodic Review Procedure

Review Criteria & Incorporation of Changes

There are no specific review criteria identified for this procedure, follow instructions in CAISO Operating Procedure 5510. Gas Transmission Operator entities should notify the CAISO whenever they are planning for changes in their regulatory requirements or operations practices that would have an impact on these procedures, and this action would trigger a review.

Frequency

Every three (3) Years.
