### State of the California power grid delivered at DC media breakfast April 12

*ISO CEO in town to brief reporters at National Press Club on new electric reliability developments*

FOLSOM, Calif. – The California Independent System Operator Corporation (ISO) will meet with journalists to discuss key issues relating to electricity reliability challenges facing California now and in the future. The ISO manages California's open-market power grid serving 30 million people and is charged with integrating renewable resources.

President and CEO Steve Berberich will brief media on the greening of the Golden State's power mix and the resources needed to ensure success of the boldest renewable energy goal in the nation—a 33% environmentally-friendly electricity supply mix by 2020.

The outlook for summer electricity supply and demand will also be presented as well as news regarding infrastructure investment in California.

Please join us in person at the DC Press Club. Steve will be available for one-on-one interviews as well.

The California ISO operates the state's wholesale transmission grid, providing open and non-discriminatory access supported by a competitive energy market and comprehensive planning efforts. Partnering with about a hundred client organizations, the nonprofit public benefit corporation is dedicated to the continual development and reliable operation of a modern grid that operates for the benefit of consumers. The ISO bulk power market allocates space on transmission lines, maintains operating reserves and matches supply with demand.
