### California ISO Regional EIM Committee Meets, Nominates Chair

Energy Imbalance Market will cover six western states, save millions in wholesale power costs

FOLSOM, Calif. – The advisory committee formed in May by the California Independent System Operator Corporation (ISO) Board of Directors to help develop a governance structure for the western regional real-time energy market held its first meeting today and unanimously nominated Rebecca Wagner, Commissioner, Public Utilities Commission of Nevada, as its Chair. The nomination is subject to confirmation by the ISO Board, which is expected to address the item during its July 15-16 meeting.

The Energy Imbalance Market (EIM) Transitional Committee is composed of nine representatives independently nominated by regional industry stakeholders and two EIM participants, PacifiCorp and NV Energy. It will make recommendations to the ISO Board to put into place a long-term governance structure, which is expected to take about eighteen months.

“With today’s meeting, the Transitional Committee begins the work to create a governance structure that is fair, transparent and inclusive of a wide range of stakeholders,” said Steve Berberich, ISO President and CEO. “The Transitional Committee is composed of regional and professional diversities, which will help make the EIM a truly western market and encourage broad participation.”

The EIM enables utilities to procure energy in other utility service territories to fulfill last minute supply and demand needs. This allows more integration of renewable resources, such as solar and wind power into their systems. The increased geographic diversity also means utilities can pool resources and reduce their reserves, which is expensive. The EIM economic study shows the real-time market can generate savings of \$21 million to \$129 million annually.

Besides nominating their chair, the committee organized itself, received a briefing on ISO policies and set a calendar for future activities. The Committee general sessions are open to the public.

The EIM will go live on October 1 with its first participant, Portland-based PacifiCorp and will cover six western states.

Members of the committee are as follows:

- *Stephen Beuning, Xcel Energy, Inc*
- *Tony Braun, Braun Blasing McLaughlin & Smith, PC*
- *Dede Hapner, Pacific Gas and Electric Company*
- *Travis Kavulla, Montana Public Service Commission*
- *Kevin Lynch, Iberdrola Renewables*
- *Mark Smith, Calpine Corporation*
- *Rebecca Wagner, Public Utilities Commission of Nevada*
- *Robert Weisenmiller, California Energy Commission*
- *Carl Zichella, Natural Resources Defense Council*
- *Natalie Hocken, PacifiCorp*
- *Walter Spansel, NV Energy*

<i>Thanks for re-posting!</i>	     
The California ISO provides open and non-discriminatory access to one of the largest power grids in the world. The vast network of high-voltage transmission power lines is supported by a competitive energy market and comprehensive grid planning. Partnering with about a hundred clients, the nonprofit public benefit corporation is dedicated to the continual development and reliable operation of a modern grid that operates for the benefit of consumers. Recognizing the importance of the global climate challenge, the ISO is at the forefront of integrating renewable power and advanced technologies that will help meet a sustainable energy future efficiently and cleanly.
