

Energy and Environmental Economics, Inc. (E3)

www.ethree.com

E3 has been at the forefront of transmission and resource planning, emerging technologies, electricity pricing, distributed resources, and rate design since the company was founded in 1989. E3 is staffed with economists, engineers, resource planners, and public policy experts working across the supply and demand sides of the energy equation. They advise utilities, regulators, government agencies, power producers, energy technology companies, and project developers on a wide range of critical energy issues.

The following key practice areas highlight E3's expertise:

- Emerging Technology Strategy
- Energy Markets and Financial Analysis
- Transmission Planning and Pricing
- Resource Planning and Procurement
- Energy Efficiency and Distributed Resources
- Energy and Environmental Policy
- Cost of Service and Rate Design
- Natural Gas
- International Electricity Policy and Planning
