Subject: Reform TAC Now

< EXTERNAL email. Evaluate before clicking. >

The current way TAC is calculated is an archaic relic of former times that is unfair to distributed generation resources. It should be modernized along the lines proposed by Clean Coalition which is strongly supported by numerous businesses and organizations including Sierra Club. It is in the public interest that outmoded CAISO rules be updated expeditiously so that investments in democratic community power through distributed renewable power systems can proceed unimpeded by unnecessary, illogical and unfair regulatory red tape. Our state's transition to a low-carbon energy economy should be advanced in every possible way. Clean Coalition's proposal deserves your immediate approval and adoption.
