Flex Alert – a call for energy conservation – in effect today

The California Independent System Operator Corporation (ISO) has issued a statewide Flex Alert that calls for voluntary electricity conservation from 1 p.m. to 10 p.m. today.

Consumers are urged to conserve electricity especially during the afternoon when air conditioners typically are at peak use. Consumers can help avoid power interruptions by turning off all unnecessary lights, using major appliances before 1 p.m. and after 10 p.m., and setting air conditioners to 78 degrees or higher.

Forecasts for today show an all-time record demand for electricity, as temperatures continue to rise in the state. The ISO has called on all available resources to be available to serve demand, however, conservation is needed to reduce the risk of further emergency measures, including rotating power outages.

The ISO's service territory serves about 80 percent of California's electricity consumers.

For more electricity conservation tips, visit the ISO's Flex Alert website at
<http://www.flexalert.org/save-energy>.

Conservation Tips

- Set thermostat at 78° or higher and turn off, if away
- Cool with fans and draw drapes
- Turn off unnecessary lights and appliances
- Use major appliances in morning or late evening

Flex Alerts

A Flex Alert is issued by the ISO when the electricity grid is under stress because of generation or transmission outages, or from persistent hot temperatures. [Glossary of terms and acronyms](#)

Consumers are urged to voluntarily conserve electricity to help avoid more serious steps to protect the power grid, including local rotating outages. However, take no action that threatens your health and safety.
