

November 05, 2020

California ISO, Folsom, Ca

To Whom It May Concern:

This letter will serve as a formal request of the City of Redding to be a signatory to the WIDSA (Western Interconnection Data Sharing Agreement). Our official statement is presented below:

The City of Redding, Redding Electric Utility (Redding) owns BES transmission and distribution facilities in Northern California. Redding has recently registered as a TO/TP and has submitted a TOP registration request to WECC. Redding is presently in the process of developing a TOP implementation plan which will be submitted to WECC by November 30, 2020. Redding has been informed by WECC that the process to certify Redding as a TOP will coincide with our TOP implementation plan. In addition, Redding is partnering with SMUD to assist with fulfilling portions of our TP and TOP requirements. Therefore, Redding is proceeding with this application process for WIDSA in order to be allowed access to shared data to assist in the implementation and certification process. Redding is a small utility, with an annual peak demand of approximately 215 MW, residing in the Balancing Authority of Northern California Area, BANC. Redding seeks this authorization under the WIDSA so that it may obtain situational awareness reports from the applicable Reliability Coordinator, relevant to reliability of the bulk electric system assets owned by Redding and the surrounding transmission system. Please register your acceptance of this request for participation under the WIDSA to the program administrator. If you have questions or wish to discuss this request prior to registering your consent with the administrator, please contact Ted Miller in Redding, Ca at 530-339-7315.”

Best regards,

*Ted A. Miller*

Ted A. Miller

Assistant Director - Operations
