**COMMENTS OF THE CALIFORNIA INDEPENDENT SYSTEM OPERATOR  
CORPORATION ON PROPOSED SETTLEMENT**

The California Independent System Operator Corporation submits these comments in support of the October 8, 2010 filing by Southern California Edison Company, Pacific Gas and Electric Company, and San Diego Gas & Electric Company, The Utility Reform Network, California Cogeneration Council, Independent Energy Producers Association, Cogeneration Association of California, The Energy Producers and Users Coalition, and the Division of Ratepayer Advocates of a joint motion for approval of a “Qualifying Facility and Combined Heat and Power Program Settlement Agreement.”<sup>1</sup> The settlement includes four proposed pro forma power purchase and sale agreements for qualifying facilities (QFs) and combined heat and power facilities (CHPs) and other provisions resolving outstanding matters in these proceedings.

---

<sup>1</sup> These comments are submitted pursuant to the Administrative Law Judge’s Ruling Shortening Time for Comments and Replies on Proposed Settlement and Consolidating Proceedings issued in these proceedings on October 11, 2010.

## I. COMMENTS

The ISO supports the provisions of the four proposed pro forma QF/CHP power purchase and sale agreements as consistent with the requirement of Commission Decision 07-09-040, issued September 25, 2007, that a signatory to a new QF/CHP power purchase and sale agreement must comply with the ISO tariff.<sup>2</sup>

The settlement also includes an agreement between the ISO and the utilities whereby the ISO has agreed to provide QFs and CHPs and their scheduling coordinators temporary exemptions from compliance with certain ISO revenue metering and telemetry requirements for up to 180 days following execution of one of the new pro forma QF/CHP power purchase and sale agreements.<sup>3</sup> The ISO has entered into this agreement in order to provide a reasonable period during which QFs and CHPs can take appropriate actions to transition from their current circumstances to full compliance with the ISO's tariff requirements pursuant to the new pro forma QF/CHP power purchase and sale agreements. The ISO supports this transition period as specified in the ISO's agreement.

Further, while the ISO does not take a position on the details of the provisions of Exhibits I and K of the new pro forma QF/CHP power purchase and sale agreements, the ISO supports measures to improve the accuracy of

---

<sup>2</sup> The ISO particularly supports the following sections of the pro forma QF/CHP power purchase and sale agreements as consistent with that requirement: 1.03, 1.08, 2.01(b)(iii), 2.01(c), 2.01(d), 2.01(f), 2.01(g), 3.02(c), 3.05, 3.06, 3.07(d) or (f) (subsection relating to compliance with ISO interconnection process; varies by agreement), 3.08(a), 3.09, 3.15(a), 3.15(d), 3.18, and 3.21. The ISO is sometimes also referred to as the CAISO.

<sup>3</sup> The ISO's metering and telemetry requirements are established pursuant to sections 10 and 7.6.1(d) of the ISO tariff, as is the ISO's authority to grant exemptions from those requirements.

advance forecasts of QF/CHP generation scheduled and delivered to the grid. The ISO believes the movement toward increased accuracy in generation forecasting and more accurate scheduling is particularly relevant in light of the ISO's recent implementation of its market redesign and the dramatic increase expected in intermittent renewable resources, which will greatly complicate the ISO's ability to maintain reliability of the grid.

As noted above, the ISO supports the intent of Exhibits I and K but recognizes that many QFs and CHPs are not able to have as much control over their electrical output as other ISO participating generators due to their obligations to their thermal hosts. The ISO is open to engaging with the QF and CHP community, and the broader stakeholder community, to consider possible tariff changes that would take into consideration the operational limitations and circumstances affecting QFs and CHPs, particularly in light of the ISO's new locational marginal pricing market design, while still requiring QFs and CHPs to submit bids and self-schedules as accurately as possible.

The ISO strongly encourages QFs and CHPs as well as their contractual partners to distinguish between output that is not dispatchable and the output that is dispatchable and make that dispatchable capacity available to the CAISO through the provision of ancillary services and economic bids for energy. The ISO's stakeholder efforts will pursue proposed tariff changes that distinguish between dispatchable and nondispatchable capacity. QF and CHP output that is dispatchable should not be "locked up" due to contractual or special pricing provisions of these new contracts. QFs and CHPs play a vital role in the

economy and environmental goals, and can also play a vital role in reliable management of the grid as we all adapt to increased penetration of intermittent resources.

## **II. CONCLUSION**

The ISO thanks the Commission for its consideration of these comments and urges the Commission to adopt pro forma QF/CHP power purchase and sale agreements that reflect these comments.

Respectfully submitted,

**By: /s/ Michael D. Dozier**
