

Hello,

I apologize for the late submittal of the following comment on the ISO's proposed tariff clarification revisions. To be consistent with the definition for FMM Instructed Imbalance Energy, shouldn't the RTD IIE (page 76 of the matrix) definition also include language referencing the EIM Base Schedules? Also, should the term "Energy" be lowercase, as it is in the FMM IIE definition? See below.

Appendix A

- FMM Instructed
Imbalance Energy
(FMM IIE)

- FMM Instructed Imbalance Energy (FMM IIE)

The accounted for energy resulting from the difference between a resource's Day-Ahead Schedules or EIM Base Schedules and FMM Schedules determined pursuant to Section 11.5.1.1.

"Imbalance Energy" was eliminated from the ISO Tariff as a defined term in the Order No. 764 tariff amendment. The ISO proposes to align the ISO Tariff with that change.

Appendix A

- RTD Instructed
Imbalance Energy

- RTD Instructed Imbalance Energy (RTD IIE)

The accounted for **E**energy resulting from the difference between Dispatch Instructions and the Day-Ahead Schedule Energy **[or EIM Base Schedule Energy]** that has not already been accounted for as FMM Instructed Imbalance Energy determined pursuant to Section 11.5.1.2.

"Imbalance Energy" was eliminated and replaced with more exacting defined terms. This amendment proposes to align this definition with that change.
