Congestion Revenue Rights (CRR) Upgrade Project - Customer Partnership Group

Monthly Call
May 31st, 2023

Congestion Revenue Rights Team
Instructions for raising your hand to ask a question

• If you are connected to audio through your computer or used the “call me” option, select the raise hand icon located on the top right above the chat window. Note: #2 only works if you dialed into the meeting.
  – Please remember to state your name and affiliation before making your comment.
  – You may also send your questions via chat to Brenda Corona or to all panelists.

The ISO has decided to upgrade the existing CRR system with a new system that adopts the latest technology stack aligned with the ISO’s technology standards, consolidates all CRR related functions, minimizes human errors, reduces processing time, eliminates manual workarounds, and positions the system to accommodate policy changes down the road.

This on-going Customer Partnership Group (CPG) will provide an overview of the schedule, review of external BRS and answer questions. Subsequent meetings will include detailed review and discussion of business process changes impacting market participants.

The goal of this CPG is to ensure customer readiness as this project deploys to Production in 2024.
RECAP: CRR Upgrade Project – Overview of changes

• Load submission process
  • At the time of load submission participant will be notified of any failed validation per sink location based on the exceedance load and allow to resubmit

• OBAALSE process
  • EQ load election will be submitted through the UI during the OBAALSE load submission

• Consolidate data publishing in MUI and/or OASIS
  – Calendar: change from webpost to OASIS
  – Model data: change from webpost to MUI, including both NDA and non NDA files
  – Market Result data: from webpost to MUI

• Modeling data
  – Powerflow case to be released in PSSE v30
  – ITC definition will be modeled as source and sink

• Features added to enable user performing additional tasks
  – MT_TOR: user to submit through UI, currently performed by CRR group

• Changes to Load Migration and Source and Sink processes

• User access
  – User will be provisioned to specific functions within the system, based on the application access request approval process

• Webservices interface for interacting with MUI
RECAP: CRR Upgrade Project – Overview of changes cont.

• **Source and Sink list release**
  – Remove the existing 30 days ahead of allocation version
  – Will be released in v0, v1 and other updates within the active market period

• **Retired resource mapping**
  – Re-map the retired PNode to the closest electrically connected PNode that is also a biddable location in the CRR processes and has the same source/sink designation as the retired location
  – Baseloading CRR will be mapped based on the model used in the active market period to capture the most accurate topology
  – Mapping will be released for the corresponding market period

• **Source and Sink islanded by outage**
  – With baseloading CRR, sell offer allowed
  – No baseloading CRR, will not be biddable for the effective market
CRR Upgrade Project – Updates

• 2/24/2023 - B2B specifications final draft posted
• 3/29/2023 - Updated BRS posted
• TODAY – Updated timelines shared with CPG
• TODAY – Draft Market Sim plan shared with CPG
CRR System Replacement Timeline

Updated May 25, 2023

Construction Phase
(2022 – 7/7/23)

FAT
(7/10/23 – 9/30/23)

SAT
(10/2/23 – 2/16/24)

UAT
(3/18/24 – 5/3/24)

Market Sim
(3/18/24 – 5/3/24)

MP Training
(Dates TBD)

Phase 2

CRR Deployment for July 1st
Market Model
(end of May ’24*)

Phase 2 Go Live

*Exact cutover date TBD
Market Sim - Overview

- Market participant training will complete prior to connectivity
- 2 week connectivity
  - Week two CAISO will provide ability for allocation and auction API upload
- 3 week structured scenario execution
- 2 week unstructured
- CAISO will request all interested CRR market participants sign up to participate in Market Sim
- All current user profiles will be migrated into Map-stage for Market Sim, new participants will need to request to be provisioned
- CAISO will add the Deployment plan cutover to this calendar in subsequent CPG

QUESTIONS?
Next Steps

• Next meeting is June 28, 2023
• Discuss following topics
  – Draft deployment plan
  – Updated Ext. BRS (as needed)
• Visit CPG webpage for more information:
REFERENCE SLIDES
CAISO B2B Improvements – Goals & Current Status

• Goals
  • Enhance the developer experience working with CAISO Web API’s
  • Provide API’s in REST/JSON using OpenAPI 3.0 specification
  • Provide examples, mock services and tooling to generate client/server stubs and SDK
  • Provide tests for the API’s using Postman collections
  • Collaboration using Git and forums on developer.caiso.com
  • Simplify authentication using mutual TLS and X.509 certificates

• Update
    • PowerPoint presentation and webinar recording
    • Draft version of CRR Auction Service OpenAPI Specifications
    • Draft version of CRR business validate message bundle
CAISO B2B Improvements – SOAP vs REST

• SOAP (Simple Object Access Protocol) provides the following advantages when compared to REST:
  – Language, platform, and transport independent (REST requires use of HTTP)
  – Works well in distributed enterprise environments (REST assumes direct point-to-point communication)
  – Standardized
  – Provides significant pre-build extensibility in the form of the WS* standards
  – Built-in error handling
  – Automation when used with certain language products

• REST (Representational State Transfer) is easier to use for the most part and is more flexible. It has the following advantages when compared to SOAP:
  – Uses easy to understand standards like swagger and OpenAPI Specification 3.0
  – Smaller learning curve
  – Efficient (SOAP uses XML for all messages, REST mostly uses smaller message formats like JSON)
  – Fast (no extensive processing required)
  – Closer to other Web technologies in design philosophy
  – As one REST API tutorial put it: SOAP is like an envelope while REST is just a postcard

https://www.soapui.org/learn/api/soap-vs-rest-api/

---

**SOAP**

POST /GetStock HTTP/1.1  
Host: www.example.org  
Content-Type: application/soap+xml

```xml
<?xml version="1.0"?>
<soap:Envelope xmlns:soap="http://www.w3.org/2001/12/soap-envelope" soap:encodingStyle="http://www.w3.org/2001/12/soap-encoding">
  <soap:Body xmlns:m="http://www.example.org/stock">
    <m:GetStockPrice>
      <m:StockName>IBM</m:StockName>
    </m:GetStockPrice>
  </soap:Body>
</soap:Envelope>
```

**REST**

GET http://example.org/stock/IBM

---

ISO Public

Page 15
The OpenAPI Specification is a specification describing, producing, consuming, and visualizing RESTful web services.

OpenAPI is known to many developers as a standard that enables API reference documentation to be generated automatically from the specification document.
CAISO B2B Improvements – OpenAPI Specification File

Consolidates technical specifications into a single document

CAISO B2B Improvements – Example: CRR Auction API

CRR Auction API

API and SDK Documentation

Version: 1.0.0

This includes all openapi services for CRR bids and offers

Read

getPortfolio

gets bids and offers for given market name, portfolio name, and logged-in user

By passing in the appropriate market name, portfolio name, and participant name, the auction portfolio will be returned.

GET

/auction/v1.0/portfolios

Usage and SDK Samples

Curl

```
GET /auction/v1.0/portfolios?marketName=MarketName&portfolioName=PortfolioName&participantName=ParticipantName
```

Java

```
// Replace with actual implementation
```

Android

```
// Replace with actual implementation
```

Obj-C

```
// Replace with actual implementation
```

JavaScript

```
// Replace with actual implementation
```

C#

```
// Replace with actual implementation
```

PHP

```
// Replace with actual implementation
```

Perl

```
// Replace with actual implementation
```

Python

```
# Replace with actual implementation
```

CAISO B2B Improvements – File Naming Convention

A2A/B2B OpenAPI File Naming Conventions for versioning:

File name example: caiso_crr_market_info_v1.0.0_openapi.yaml

Version Numbering Format: MAJOR.MINOR.MINI

MAJOR version of the file name will be incremented if there are any new services added or any major version update to any of the existing services

MINOR version of the file name will be incremented if there any minor version update to any of the existing services

MINI version of the file name will be incremented if there are only documentation changes/corrections, with no service changes.
CAISO B2B Improvements

Each version update of the file name will reset the version numbers on the right.

Version numbers will be tracked into the YAML file as part of the Release Notes.

Example:

- v1.0.0  File is published to market participants
- v1.0.1  Edits were made to documentations, no functional changes
- v1.0.2  Edits were made to documentations, no functional changes
- v1.0.3  Edits were made to documentations, no functional changes
- v1.1.0  Added a Minor version for a service
- v1.1.1  Edits were made to documentations, no functional changes
- v1.2.0  Added a Minor version for a service
- v1.3.0  Added a Minor version for a service
- v2.0.0  Added a Major version for a service
- v2.0.1  Edits were made to documentations, no functional changes
- v3.0.0  Added a new service
