	Template Version Date:	08/09/2011
Release Notes	Effective Date:	08/09/2011

Release Identification

Application/System Name	OASIS
Version Identifier	6.0.2.8
Planned Release Date	08/11/2011 between 4:00pm – 6:00pm Pacific Time
Project Name	n/a

New Functionality Included

No new functionality in this release.

Variations and Issues Addressed

Release 6.0.2.8 affects the Locational Marginal Prices – On/Off Peak Prices report, Day-Ahead Market Summary report, and the Day-Ahead Public Bid report, with the following details:

Locational Marginal Prices - On/Off Peak Prices report

The ISO will conduct a retroactive data true-up process to amend blank or incorrect prices for On Peak or Off Peak nodes from trading day February 1, 2011 up to May 3, 2011. This data variance is due to the system not appropriately accounting the post-market (T+5) price corrections on the On or Off Peak nodes.

This data true-up process will **not** produce any publication and revision log entry or affect/change prices posted under generic hubs TH_NP15_GEN-APND, TH_SP15_GEN-APND, and TH_ZP26_GEN-APND.

The ISO will complete the On/Off Peak price retroactive data backfill process during the patch deployment, August 11, 2011 between 4pm and 6pm (Pacific Time).

Day-Ahead Market Summary report

The ISO has identified variances that impact the values reported under the Energy Submitted (MWH) and Dollars Submitted report attributes for trading days February 1, 2011 up to August 12, 2011, due to random missing market bid schedule data in the system; and/or inaccurate calculation of the submitted energy and prices when taking into account multi-stage generator resource bids.

Day-Ahead Public Bid report

Due to the random missing market bid schedule data variance in the system, public bids for the day-ahead market will be regenerated for trading days February 1, 2011 up to May 26, 2011.

The ISO will complete its retroactive data backfill process covering the Day-Ahead Market Summary report and the Day-Ahead Public Bid report's respective affected trading period, on or before calendar date August 24, 2011. OASIS will post report publication and revision log entries indicating the fully processed trading days.

Market participants who refer to any of the impacted reports under release 6.0.2.8 can view or re-download the generated true-up data as it becomes available on OASIS.
