SLIC Web Service API Guide

Version: 5.0.5

January 9, 2014

Revision History

Date	Version	Description	Author
2002	1.0	Initial release of this document	Shawn Rogan
October 2003	2.0	Revised to include support ISO MD02	Shawn Rogan
February 2007	3.0	Updated to include new RTAM and System Notification API Calls Title changed from "SLIC Web Service"	Cas Mundy
December 2009	4.0	Updated to include changes to support for Multi Stage Generation providers.	Jeremey Leng
March 4, 2010	4.1	Modified to reflect recent design decisions	Jeremy Leng
May 20, 2010	4.2	Modified to reflect recent design decisions	Jeremy Leng
Aug 20, 2010	4.3	Modified to reflect recent design decisions	Jeremy Leng
July 23, 2012	4.4	Updated to include changes to support for NGR resource outages	Arul Jayaraman
September 28, 2012	4.4.1	Updated section 7.Appendix to include ngr_out_of_service element to SLICDataTypes	Arul Jayaraman
December 17, 2012	4.4.2	Added list of currently supported SLIC API versions to section 1.3	Yinka Ajede
January 7,2013	5.0.0	Updated release notes in section 1.3, as well as section 7, Appendix to include regulation_outage element to SLICDataTypes. Also, updated all the WSDL versions.	Arul Jayaraman
January 8,2013	5.0.1	Updated SLICDataTypes to include regulation_outage element to the outage_card and removed from the OutageSearchResult	Arul Jayaraman

February 11,2013	5.0.2	Updated SLICDataTypes_v7.xsd to correct typo in the element name and added usage documentation.	Arul Jayaraman
March 11, 2013	5.0.3	Updated SLICDataTypes_v7.xsd to add regulation_outage element to OutageRequestData and OutageSearchResult complex types	Arul Jayaraman
March 21, 2013	5.0.4	Updated SLICDataTypes_v7.xsd to change the data type of regulation_outage in OutageRequestData complex type element from StringAtt to string. Updated the OutageWebService_v4.wsdl to poin to xmlns:sns= https://slic.caiso.com/schemas/slic/v6 instead of xmlns:sns= https://slic.caiso.com/schemas/slic/v5	Arul Jayaraman
January 9, 2014	5.0.5	Added a new appendix (section 8 – Resource specific attribute definitions) with a table of resource type specific attribute keys and their definitions	Yinka Ajede

1 Introduction

1.1 Purpose

This document describes the Market Participant interface to CAISO's Scheduling & Logging for ISO of California. It provides the WSDL, XSD, and XML information required by application programmers to make RPC style web service calls to the system.

1.2 Contact Information

For any questions regarding this document or technical questions related to integrating applications with CAISO's SLIC web services, please send email to slic@caiso.com

1.3 Release Notes

1.3.1 Release Notes for Version 5.0.4 SLIC API Guide

This release of the API guide includes changes to support the FERC 755 project requirements

Changes include:

- The outageCard data type has been extended to include regulation_outage element which will be used to submit regulation outages.
- This regulation_outage element is optional element and it is only applicable for generator derate cards.
- The OutageSearchResult and OutageRequestData types are updated to include regulation_outage element.

SLIC API versions supported by the ISO as of Spring 2013 are described in the table below:

Technical API Guide	API Version Web Services Description Language (WSDLs)	Highlights	Effective Date
SLIC Web Service API Guide V5.0.4	OutageRequestWebService_v5.wsdl OutageWebService_v5.wsdl AvailabilityWebService_v5.wsdl RTAMWebService_v4.wsdl SystemNotificationWebService_v1.wsdl	Addition of new regulation flag to existing outage type to support FERC 755	Spring 2013
SLIC Web Service API Guide V4.4.2	OutageRequestWebService_v4.wsdl OutageWebService_v4.wsdl AvailabilityWebService_v4.wsdl RTAMWebService_v3.wsdl SystemNotificationWebService_v1.wsdl	Addition of new outage type to support Non Generating Resources (NGRs)	Fall 2012

SLIC Web Service API Guides 3.0, 2.0 and 1.0 as well as associated WSDLs will no longer be supported as of Spring 2013.

1.3.2 Release Notes for Version 5.0.5 SLIC API Guide

This release of the API guide includes a new appendix (section 8) with resource specific attribute definitions.

1.4 Namespace Matrix

SLIC Data Types	https://slic.caiso.com/schemas/slic/v7
Base Data Types	https://slic.caiso.com/schemas/base/v3
Availability Web Service	http://www.caiso.com/webservices/slic/AvailabilityWebService/5.0
Outage Retrieval Web Service	http://www.caiso.com/webservices/slic/OutageWebService/5.0
Outage Request Web Service	http://www.caiso.com/webservices/slic/OutageRequestWebService/5.0
RTAM Web Service	http://www.caiso.com/webservices/slic/RTAMWebService/4.0
System Notice Web Service	http://www.caiso.com/webservices/slic/SystemNotificationWebService/1.0

1.5 Related Documents

NA

2 Availability Web Services

2.1 Business Scenario

Outage coordinators can retrieve generator availability information for affiliated generators. Generator availability information includes reported (stated) values as well as values that were known to the system in real-time.

Additionally, outage coordinators can retrieve availability data requirements for proposed equipment outage submissions and validate availability data prior to submission.

2.2 Service Level Agreement

The following service level agreement defines the business and technical requirements for service availability and performance.

Service availability	Service level goal is 99.9%.
Expected size of payload (average and maximum)	Variable (1KB to 1MB+)
Expected frequency (average and maximum)	On demand (50/day – 200/day).
Longest time the service can be unavailable before business is impacted	30 minutes
Business impact if is unavailable	External outage coordinators will need to use an alternate means to submit outage data (SLIC Web Client, phone call to the CA ISO)
Expected response time for the service	Variable (.1 sec – 30 sec)
Expected time to exchange	On demand

2.3 Use Model

Not available.

2.4 Operation Details

The following operations are all part of the Availability Web Service and are defined in the WSDL availabilitywebservice_v3.wsdl listed in section 2.5

2.4.1 Exception Handling

All Availability web service operations on exception produce an AvailabilityWebServiceException fault.

Fault name	Fault Parts	Fault part data type	Fault part description
AvailabilityWebServiceException	code	int	Unique fault code ID
	message	string	Description of fault>
	point_dts	string	Point in time when generator availability changes

2.4.2 getActualAvailability

Returns the resource MW availability that SLIC used at the time specified.

Operation	Message name	type	Parameter data type	Parameter Name	Description
getActualAvailability	<i>getActualAvailabilityRequest</i>	Input	string	res_id	Resource ID
		Input	dateTime	dts	Date of inquiry
	<i>getActualAvailabilityResponse</i>	Output	double	return	resource MW availability that SLIC used at the time specified
	<i>AvailabilityWebServiceException</i>	Fault			Exception error message

2.4.3 getAvailabilityActuals

Returns actual (real-time) resource availability data for a specified time period.

Operation	Message name	type	Parameter data type	Parameter Name	Description
getAvailabilityActuals	<i>getAvailabilityActualsRequest</i>	Input	string	res_id	Resource ID

		Input	dateTime	start_dts	Starting date/time for the time frame of interest
		Input	dateTime	end_dts	Ending date/time for the time frame of interest
	<i>getAvailabilityActualsResponse</i>	Output	<i>ArrayOf_AvailabilityActual</i>	<i>ArrayOf_AvailabilityActual</i>	array of availability actual values found for the resource in the time frame
	<i>AvailabilityWebServiceException</i>	Fault			Exception error message

2.4.4 getAvailabilityPoints

Retrieves all resource availability points for a specified time period.

Operation	Message name	type	Parameter data type	Parameter Name	Description
getAvailabilityPoints	<i>getAvailabilityPointsRequest</i>	Input	string	res_id	Resource ID
		Input	dateTime	start_dts	Starting date/time for the time frame of interest
		Input	dateTime	end_dts	Ending date/time for the time frame of interest
	<i>getAvailabilityPointsResponse</i>	Output	<i>ArrayOf_AvailabilityPoin</i>	<i>ArrayOf_AvailabilityPoin</i>	array of availability point values found for the resource in the time frame
	<i>AvailabilityWebServiceException</i>	Fault			Exception error message

2.4.5 getRequiredAvailabilityPoints

Loads and returns resource availability points that must be set for the specified time period. This is used to determine required input data

Operation	Message name	type	Parameter data type	Parameter Name	Description
getRequiredAvailabilityPoints	<i>getRequiredAvailabilityPointsRequest</i>	Input	Int	mode	Type of call that will be issued (see WSDL)
		Input	string	res_id	Resource ID
		Input	dateTime	start_dts1	Original (current) Start Date/Time of the Outage to be rescheduled
		Input	dateTime	end_dts1	Original (current) End Date/Time of the Outage to be rescheduled.
		Input	dateTime	start_dts2	Proposed Start Date/Time of the Outage to be rescheduled.
		Input	dateTime	end_dts2	Proposed End Date/Time of the Outage to be rescheduled
		Input	int	outage_id	ISO SLIC Outage ID
	<i>getRequiredAvailabilityPointsResponse</i>	Output	<i>ArrayOf_AvailabilityPoint</i>	<i>ArrayOf_AvailabilityPoint</i>	Availability point values that must be set for the supplied input values
<i>AvailabilityWebServiceException</i>	Fault			Exception error message	

2.4.6 getStatedAvailability

Returns the raw resource MW availability that was submitted by the schedule coordinator. Business or auditing rules may cause a difference between stated and actual availability.

Operation	Message name	type	Parameter data type	Parameter Name	Description
getStatedAvailability	<i>getStatedAvailabilityRequest</i>	Input	string	res_id	Resource ID

		Input	dateTime	dts	Date of inquiry
	<i>getStatedAvailabilityResponse</i>	Output	double	return	stated availability, in MW, for the resource and date in question
	<i>AvailabilityWebServiceException</i>	Fault			Exception error message

2.4.7 LoadAvailabilityPoint

Loads resource availability MW and concurrent Outage details using a unique key.

Operation	Message name	type	Parameter data type	Parameter Name	Description
LoadAvailabilityPoint	<i>loadAvailabilityPointRequest</i>	Input	Int	point_key	The artificial key for the availability point in question as stored within the SLIC database
	<i>loadAvailabilityPointResponse</i>	Output	<i>AvailabilityPoint</i>	return	The availability point value corresponding to the supplied point key
	<i>AvailabilityWebServiceException</i>	Fault			Exception error message

2.4.8 validateAvailabilityPoints

Validates a supplied set of resource availability points that will be used as input data

Operation	Message name	type	Parameter data type	Parameter Name	Description
validateAvailabilityPoints	<i>validateAvailabilityPointsRequest</i>	Input	Int	mode	Type of call that will be issued (see WSDL)
		Input	Int	error_level	Bit flag indicating which warnings should be ignored
		Input	String	<i>res_id</i>	ID of the resource of interest.
		Input	<i>ArrayOf_AvailabilityPointValue</i>	<i>point_values</i>	The availability point values to validate.
		Input	<i>dateTime</i>	<i>start_dts1</i>	Original (current) Start Date/Time of the Outage to be rescheduled
		Input	<i>dateTime</i>	<i>end_dts1</i>	Original (current) End Date/Time of the Outage to be rescheduled
		Input	<i>dateTime</i>	<i>start_dts2</i>	Proposed Start Date/Time of the Outage to be rescheduled
		Input	<i>dateTime</i>	<i>end_dts2</i>	Proposed End Date/Time of the Outage to be rescheduled
		Input	Int	<i>outage_id</i>	ISO SLIC Outage ID
		<i>validateAvailabilityPointsResponse</i>	Output	boolean	<i>return</i>
	<i>AvailabilityWebServiceException</i>	Fault			Exception error message

2.6 Fault Return

The fault return message is the same for all services; see Section 2.9 for details.

3 Outage Web Services

3.1 Business Scenario

Outage Coordinators can retrieve outage information that has been previously submitted to the CA ISO. Outages may be retrieved by unique identifier or searched by various criteria.

Additionally, outage and equipment characteristic information, such as Ramp Rate Segments and, Planned/Forcedtimepline indicator can be retrieved.

3.2 Service Level Agreement

The following service level agreement defines the business and technical requirements for service availability and performance.

Service availability	<i>Service level goal is 99.9%.</i>
Expected size of payload (average and maximum)	<i>Less than 1 KB.</i>
Expected frequency (average and maximum)	<i>The only action is to cancel bids. Expect this to be infrequent.</i>
Longest time the service can be unavailable before business is impacted	<i>[to be determined]</i>
Business impact if is unavailable	<i>Schedule Coordinators utilizing the service may not cancel a bid.</i>
Expected response time for the service	<i>[to be determined]</i>
Expected time to exchange	<i>[to be determined]</i>

3.3 Use Model

Not available

3.4 Operation Details

3.4.1 Exception Handling

All Outage web service operations on exception produce an OutageWebServiceException fault.

Fault name	Fault Parts	Fault part data type	Fault part description
AvailabilityWebServiceException	code	int	SLIC error code
	message	string	Text error message

3.4.2 downloadOutageSearchXML

Used to page through Outage requests. Differs from the **downloadOutageSearchXML2** operation only by object type of the parameters.

Operation	Message name	type	Parameter data type	Parameter Name	Description
downloadOutageSearchXML	<i>downloadOutageSearchXMLRequest</i>	Input	Int	res_id	Resource to return Null will return all.
		Input	int	res_type_key	Resource types to return 0 will return all.
		Input	String	status_cd	Outage states to return. Null will return all.
		Input	Int	type	Outage type to return 0 will return all.
		Input	Int	date_mode	Date mode to enforce (RECEIVED, UPDATED, OUT) 0 will ignore dates.
		Input	dateTime	start_date	Date to begin querying.
		Input	dateTime	End_date	Date to end querying
	<i>downloadOutageSearchXMLResponse</i>	Output	String	return	XML representation of matching outages

	<i>OutageWebServiceException</i>	Fault			Exception error message
--	----------------------------------	-------	--	--	-------------------------

3.4.3 downloadOutageSearchXML2

Used to page through Outage requests. Differs from the operation only by the object type of the parameters.

Operation	Message name	type	Parameter data type	Parameter Name	Description
downloadOutageSearchXML2	<i>downloadOutageSearchXMLRequest</i>	Input	ArrayOf_Int	Outage_mod_e_key	
		Input	Int	res_id	Resource to return Null will return all.
		Input	int	res_type_key	Resource types to return 0 will return all.
		Input	String	status_cd	Outage states to return. Null will return all.
		Input	Int	type	Outage type to return 0 will return all.
		Input	Int	date_mode	Date mode to enforce (RECEIVED, UPDATED, OUT) 0 will ignore dates.
		Input	dateTime	start_date	Date to begin querying.
		Input	dateTime	end_date	Date to end querying
		<i>downloadOutageSearchXMLResponse</i>	Output	String	return
	<i>OutageWebServiceException</i>	Fault			Exception error message

3.4.4 getOutageTimelineIndicator

Calls the timeline indicator API with a date to determine an Outage classification (PLANNED,

FORCED, or FORCED/IMMEDIATE) at the time of submission.

Operation	Message name	type	Parameter data type	Parameter Name	Description
getOutageTimelineIndicator	<i>getOutageTimelineIndicatorRequest</i>	Input	Int	<i>outage_mode_key</i>	Type of Outage (DERATE, RERATE, etc.)
		Input	<i>dateTime</i>	<i>outage_start_dts</i>	Proposed start date of the Outage which will be created. all.
	<i>getOutageTimelineIndicatorResponse</i>	Output	int	return	The timeline indicator value for the supplied mode and date (PLANNED, FORCED, etc).
	<i>OutageWebServiceException</i>	Fault			Exception error message

3.4.5 isForced

Determines if the FORCED Outage timeline is valid for the specified Outage type and start date.

Operation	Message name	type	Parameter data type	Parameter Name	Description
isForced	<i>isForcedRequest</i>	Input	Int	<i>outage_mode_key</i>	Type of Outage (DERATE, RERATE, etc.)
		Input	<i>dateTime</i>	<i>outage_start_dts</i>	Proposed start date of the Outage which will be created. all.
	<i>isForcedResponse</i>	Output	boolean	return	True if the Outage mode and date would be within the FORCED timeframe
	<i>OutageWebServiceException</i>	Fault			Exception error message

3.4.6 isForcedImmediate

Determines if the FORCED/IMMEDIATE Outage timeline is valid for the specified Outage type and start date.

Operation	Message name	type	Parameter data type	Parameter Name	Description
isForcedImmediate	<i>isForcedImmediateRequest</i>	Input	Int	<i>outage_mode_key</i>	Type of Outage (DERATE, RERATE, etc.)
		Input	<i>dateTime</i>	<i>outage_start_dts</i>	Proposed start date of the Outage which will be created. all.
	<i>isForcedImmediateResponse</i>	Output	boolean	return	True if the Outage mode and date would be within the FORCED/IMMEDIATE timeframe
	<i>OutageWebServiceException</i>	Fault			Exception error message

3.4.7 isPlanned

Determines if the PLANNED Outage timeline is valid for the specified Outage type and start date.

Operation	Message name	type	Parameter data type	Parameter Name	Description
isPlanned	<i>isPlannedRequest</i>	Input	Int	<i>outage_mode_key</i>	Type of Outage (DERATE, RERATE, etc.)
		Input	<i>dateTime</i>	<i>outage_start_dts</i>	Proposed start date of the Outage which will be created.
	<i>isPlannedResponse</i>	Output	boolean	return	True if the Outage mode and date would be within the PLANNED timeframe
	<i>OutageWebServiceException</i>	Fault			Exception error message

3.4.8 loadByID

Used to load an Outage.

Operation	Message name	type	Parameter data type	Parameter Name	Description
loadByID	<i>loadByIDRequest</i>	Input	Int	<i>outage_id</i>	ISO SLIC Outage ID

	<i>loadByIDResponse</i>	Output	<i>OutageCard</i>	return	Data structure containing Outage details.
	<i>OutageWebServiceException</i>	Fault			Exception error message

3.4.9 loadByReferenceID

Used to load an Outage.

Operation	Message name	type	Parameter data type	Parameter Name	Description
loadByReferenceID	<i>loadByReferenceIDRequest</i>	Input	String	<i>ref_id</i>	Outage ID supplied by the external entity
	<i>loadByReferenceIDResponse</i>	Output	<i>OutageCard</i>	return	Data structure containing Outage details.
	<i>OutageWebServiceException</i>	Fault			Exception error message

3.4.10 loadRampRateSegments

Used to load ramp rate segment data.

Operation	Message name	type	Parameter data type	Parameter Name	Description
loadRampRateSegments	<i>loadRampRateSegmentsRequest</i>	Input	String	<i>res_id</i>	Resource ID supplied by the external entity
		Input	<i>dateTime</i>	<i>outage_start_dts</i>	Outage start date/time.
	<i>loadRampRateSegmentsResponse</i>	Output	<i>ArrayOf_PRampRateSegment</i>	return	Array of data structures containing ramp rate data.
	<i>OutageWebServiceException</i>	Fault			Exception error message

3.4.11 searchByCriteria

Used to page through Outage requests. Differs from the **searchByCriteria2** operation only by object type of the parameters.

Operation	Message name	type	Parameter data type	Parameter Name	Description
searchByCriteria	<i>searchByCriteriaRequest</i>	Input	Int	<i>page_index</i>	Browse page index.
		Input	String	<i>res_id</i>	Resources to return Null will return all.
		Input	Int	<i>res_type_key</i>	Resource types to return 0 will return all.
		Input	String	<i>status_cd</i>	Outage states to return. Null will return all
		Input	int	<i>type</i>	Outage type to return 0 will return all.
		Input	int	<i>date_mode</i>	Date mode to enforce (RECEIVED, UPDATED, OUT) 0 will ignore dates
		Input	dateTime	<i>start_date</i>	Date to begin querying.
		Input	dateTime	<i>end_date</i>	Date to end querying
		<i>searchByCriteriaResponse</i>	Output	<i>OutageSearch ResultPage</i>	return
	<i>OutageWebServiceException</i>	Fault			Exception error message

3.4.12 searchByCriteria2

Used to page through Outage requests. Differs from the **searchByCriteria** operation only by the object type of the parameters.

Operation	Message name	type	Parameter data type	Parameter Name	Description
searchByCriteria2	<i>searchByCriteria2Request</i>	Input	Int	<i>page_index</i>	Browse page index.
		Input	ArrayOf_Int	<i>outage_mode_key</i>	Outage modes to be included in results
		Input	ArrayOf_String	<i>res_id</i>	Resources to return Null will return all.

		Input	<i>ArrayOf_Int</i>	res_type_key	Resource types to return 0 will return all.
		Input	<i>ArrayOf_String</i>	status_cd	Outage states to return. Null will return all
		Input	<i>ArrayOf_Int</i>	type	Outage type to return 0 will return all.
		Input	<i>int</i>	date_mode	Date mode to enforce (RECEIVED, UPDATED, OUT) 0 will ignore dates
		Input	<i>dateTime</i>	start_date	Date to begin querying.
		Input	<i>dateTime</i>	end_date	Date to end querying
	<i>searchByCriteria2Response</i>	Output	<i>OutageSearchResultPage</i>	return	Results page that includes an array of matching Outages.
<i>OutageWebServiceException</i>	Fault			Exception error message	

3.4.13 getLastUpdateTime

Retrieves the Date/Time that an Outage(s) was most recently updated

Operation	Message name	type	Parameter data type	Parameter Name	Description
getLastUpdateTime	<i>getLastUpdateTimeRequest</i>	Input	<i>ArrayOf_int</i>	<i>outage_ids</i>	Browse page index
	<i>getLastUpdateTimeResponse</i>	Output	<i>ArrayOf_NamedValueID</i>	return	Returns the Outage ID (ID), BA Reference ID (Name) and Outage Update Date/Time (Value) for the specified Outages
	<i>OutageWebServiceException</i>	Fault			Exception error message

4 Outage Request Web Services

4.1 Business Scenario

Outage coordinators can submit requests to enter, update or manage equipment outages. Additionally, outage coordinators can retrieve previously submitted requests and supporting reference data.

4.2 Service Level Agreement

The following service level agreement defines the business and technical requirements for service availability and performance.

Service availability	Service level goal is 99.9%.
Expected size of payload (average and maximum)	Variable (1KB to 1MB+)
Expected frequency (average and maximum)	On demand (500/day – 1000/day).
Longest time the service can be unavailable before business is impacted	30 minutes
Business impact if is unavailable	External outage coordinators will need to use an alternate means to submit outage data (SLIC Web Client, phone call to the CA ISO)
Expected response time for the service	Variable (.1 sec – 30 sec)
Expected time to exchange	On demand

4.3 Use Model

Not available

4.4 Operation Details

4.4.1 Exception Handling

Exceptions can be thrown under numerous conditions by all the OutageRequestWebService operations, for example.

- Outage card fails validation.
- Insufficient overlap relationship data is provided
- Outage can be characterized as Forced/Immediate

Fault name	Fault Parts	Fault part data type	Fault part description
<i>OutageRequestWebServiceException</i>	code	int	SLIC error code
	message	string	Text error message
	<i>overlaps</i>	<i>OverlapOutages</i>	Does not apply

4.4.2 addInformationRequest

Submits a new set of Availability Points for an Outage

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
addInformationRequest	<i>addInformationRequestResponse</i>	Input	String	user_id	SSL client certificate name of user making request
			Int	outage_id	ISO SLIC Outage ID
			String	comment	Optional text description of request
			Int	reason_code	ISO reason code
			string	reason	Text description
			ArrayOf_Attribute Values	att_values	Optional attribute values that further characterize the request
	<i>addInformationRequestResponse</i>	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			Exception error message

4.4.3 cancelOutageRequest

Used to request an Outage cancellation.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
cancelOutageRequest	<i>cancelOutageRequestRequest</i>	Input	error_level	Int	<need description>
			String	user_id	SSL client certificate name of user making request
			Int	outage_id	ISO SLIC Outage ID
			String	comment	Optional text description of request
			Int	reason_code	ISO reason code
			string	reason	Text description
			ArrayOf_Availability PointValue	pointVals	
			ArrayOf_AttributeValues	att_values	Optional attribute values that further characterize the request
	<i>cancelOutageRequestResponse</i>	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			Exception error message

4.4.4 changeOutageRequest

Used to request a change to Outage data.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
changeOutageRequest	<i>changeOutageRequestRequest</i>	Input	String	user_id	SSL client certificate name of user making request
			String	<i>comment</i>	Optional text description of request
			OutageCard	<i>Outage_card</i>	Structure that describes data changes. ngr_pmax,ngr_pmin,ngr_el_max (energy limit max) and ngr_el_min (energy limit min) are only applicable to NGR

					resources.
			<i>ArrayOf_AttributeValue</i>	<i>att_values</i>	Optional attribute values that further characterize the request
	<i>changeOutageRequestResponse</i>	Output	Int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.5 correctInRequest

Creates requests for SLIC Outage transactions relating to the correction of Outage lifecycle events

Operation	Message name	Type	Parameter data type	Parameter Name	Parameter description
correctInRequest	<i>correctInRequestRequest</i>	Input	Int	error_level	Bit flag indicating which warnings should be ignored.
			String	user_id	SSL client certificate name of user making request
			Int	outage_id	ISO SLIC outage ID
			String	comment	Optional text description of request
			<i>dateTime</i>)	<i>newDTS</i>	New date for when the outage should convert to out
			<i>int</i>	<i>reason_code</i>	ISO reason code
			String	<i>reason</i>	Text description
			<i>ArrayOf_AvailabilityPointValue</i>	<i>pointVals</i>	An array of availability point values
	<i>ArrayOf_AttributeValue</i>	<i>att_values</i>	An array of attribute values		
	<i>correctInRequestResponse</i>	Output	Int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.6 correctOutRequest

Creates requests for SLIC Outage transactions relating to the correction of Outage lifecycle events.

Operation	Message name	Type	Parameter data type	Parameter Name	Parameter description
correctOutRequest	<i>correctOutRequestRequest</i>	Input	Int	error_level	Bit flag indicating which warnings should be ignored.
			String	user_id	SSL client certificate name of user making request
			Int	outage_id	ISO SLIC outage ID
			String	comment	Optional text description of request
			dateTime	newDTS	New date for when the outage should convert to out
			int	reason_code	ISO reason code
			String	reason	Text description
			ArrayOf_AvailabilityPointValue	pointVals	An array of availability point values
	ArrayOf_AttributeValue	att_values	An array of attribute values		
	<i>correctOutRequestResponse</i>	Output	Int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.7 forcedImmediateOutageRequest

Used to request a new forced/immediate Outage. The current window for creating a forced/immediate Outage is less than 24 hours before the Outage starts.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
forcedImmediateOutageRequest	<i>forcedImmediateOutageRequestRequest</i>	Input	Int	error_level	Bit flag indicating which warnings should be ignored

			String	<i>user_id</i>	SSL client certificate name of user making request.
			String	<i>comment</i>	Optional text description of request
			<i>OutageCard</i>	<i>outage_card</i>	Structure that describes data changes. ngr_pmax,ngr_pmin,ngr_el_max (energy limit max) and ngr_el_min (energy limit min) are only applicable to NGR resources.
			<i>ArrayOf_AvailabilityPointValue</i>	<i>pointVals</i>	An array of availability point values
			<i>ArrayOf_AttributeValue</i>	<i>att_values</i>	Optional attribute values that further characterize the request.
	<i>forcedImmediateOutageRequestResponse</i>	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.8 forcedOutageRequest

Used to request a new forced Outage. The current window for creating a forced Outage is less than 3 business days and more than 24 hours before Outage start.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
forcedOutageRequest	<i>newOutageRequestRequest</i>	Input	Int	error_level	Bit flag indicating which warnings should be ignored
			String	user_id	SSL client certificate name of user making request.
			String	comment	Optional text description of request
			<i>OutageCard</i>	<i>outage_card</i>	Structure that describes data changes. ngr_pmax,ngr_pmin,ngr_el_max (energy limit max) and ngr_el_min (energy limit min) are only applicable to NGR

					resources.
			<i>ArrayOf_AvailabilityPointValue</i>	<i>pointVals</i>	An array of availability point values
			<i>ArrayOf_AttributeValue</i>	<i>att_values</i>	Optional attribute values that further characterize the request.
	<i>newOutageRequestResponse</i>	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.9 loadByID

Used to load a request

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
loadByID	<i>loadByIDRequest</i>	Input	Int	request_id	Request ID
	<i>loadByIDResponse</i>	Output	<i>OutageRequestData</i>	return	Data structure containing request details
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.10 loadMultipleRequestStatus

Searches for and retrieves the status of multiple SLIC requested Outage transactions.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
loadMultipleRequestStatus	<i>loadMultipleRequestStatusRequest</i>	Input	<i>ArrayOf_Int</i>	request_ids	Array of request ID's
	<i>loadMultipleRequestStatusResponse</i>	Output	<i>ArrayOf_PNamedValueID</i>	return	An array of pre-named values
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.11 loadMultipleRequestStatus2

Searches for and retrieves the status of multiple SLIC requested Outage transactions

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
loadMultipleRequestStatus2	<i>loadMultipleRequestStatus2Request</i>	Input	<i>ArrayOf_IntegerAtt</i>	request_ids	Request ID
	<i>loadMultipleRequestStatus2Response</i>	Output	<i>ArrayOf_PNamedValueID</i>	return	An array of pre-named values
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.12 loadRequestStatus

Searches for and retrieves the status of a SLIC requested Outage transaction

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
loadRequestStatus	<i>loadRequestStatusRequest</i>	Input	int	request_id	The ISO request ID for the request
	<i>loadMultipleRequestStatusResponse</i>	Output	String	return	A string indicating the status of the requested SLIC Outage.
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.13 loadRequestStatus2

Searches for and retrieves the status of a SLIC requested Outage transaction.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
loadRequestStatus2	<i>loadRequestStatus2Request</i>	Input	<i>IntegerAtt</i>	<i>request_id</i>	The Outage Request ID specified as an IntegerAtt.
	<i>loadRequestStatus2Response</i>	Output	String	return	A string indicating the status of the requested SLIC Outage

	<i>OutageRequestWebServiceException</i>	Fault			
--	---	-------	--	--	--

4.4.14 newOutageRequest

Used to request a new planned Outage. The current window for creating a planned Outage is three business days prior to the start of the Outage.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
newOutageRequest	<i>newOutageRequestRequest</i>	Input	Int	error_level	Bit flag indicating which warnings should be ignored
			String	user_id	SSL client certificate name of user making request.
			String	comment	Optional text description of request
			<i>OutageCard</i>	<i>outage_card</i>	Structure that describes data changes
			<i>ArrayOf_AvailabilityPointValue</i>	<i>pointVals</i>	An array of availability point values
	<i>ArrayOf_AttributeValue</i>	<i>att_values</i>	Optional attribute values that further characterize the request.		
	<i>newOutageRequestResponse</i>	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.15 rescheduleOutageRequest

Used to request a change to the start and end dates of an Outage.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
rescheduleOutageRequest	<i>rescheduleOutageRequestRequest</i>	Input	Int	error_level	Bit flag indicating which warnings should be ignored
			String	user_id	SSL client certificate name of user making request.

			<i>OutageCard</i>	<i>outage_card</i>	Structure that describes data changes
			String	comment	Optional text description of request
			dateTime	outageStart DTS	New Outage start date/time
			dateTime	outageEnd DTS	New Outage end date/time
			int	reason_code	ISO reason code
			String	reason	Text description
			ArrayOf_AvailabilityPointValue	pointVals	An array of availability point values
			ArrayOf_AttributeValue	att_values	Optional attribute values that further characterize the request.
	<i>rescheduleOutageRequestResponse</i>	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.16 rescheduleDueBackRequest

Used to request a change to the Outage end date

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
rescheduleDueBackRequest	<i>rescheduleDueBackRequestRequest</i>	Input	Int	error_level	Bit flag indicating which warnings should be ignored
			String	user_id	SSL client certificate name of user making request.
			int	outage_id	Structure that describes data changes
			String	comment	Optional text description of request
			dateTime	outageEnd	End date/time of outage

				DTS	
			<i>int</i>	reason_code	ISO reason code
			String	reason	Text description
			ArrayOf_AvailabilityPointValue	pointVals	An array of availability point values
			ArrayOf_AttributeValue	att_values	Optional attribute values that further characterize the request.
	<i>rescheduleDueBackRequestResponse</i>	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.17 **reviseAvailabilityRequest**

Creates a request for a SLIC Outage transaction that will modify resource availability during an Outage.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
reviseAvailabilityRequest	reviseAvailabilityRequestRequest	Input	Int	error_level	Bit flag indicating which warnings should be ignored
			String	user_id	SSL client certificate name of user making request.
			int	outage_id	Structure that describes data changes
			String	comment	Optional text description of request
			<i>int</i>	reason_code	ISO reason code
			String	reason	Text description
			ArrayOf_AvailabilityPointValue	pointVals	An array of availability point values
	ArrayOf_AttributeValue	att_values	Optional attribute values that further characterize the request.		
	reviseAvailabilityRequestResponse	Output	int	return	Unique ID for the request. Can be used to track request

					status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.18 revisePMINRerateRequest

Used to request a change to the Outage PMIN rerate

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
revisePMINRerate Request	revisePMINRerateRequest Request	Input	String	user_id	SSL client certificate name of user making request.
			int	outage_id	Structure that describes data changes
			String	comment	Optional text description of request
			double	newVal	New PMIN rerate value
			int	reason_code	ISO reason code
			String	reason	Text description
			ArrayOf_AttributeValue	att_values	Optional attribute values that further characterize the request.
	revisePMINRerateRequest Response	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.19 revise PMINRerateRequest2

Used to request a change to the Outage PMIN rerate using an array of PMinValue complex types.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
revisePMinRerateRequest2	revisePMinRerateRequest2 Request	Input	String	user_id	SSL client certificate name of user making request.
			int	outage_id	Structure that describes data changes
			String	comment	Optional text description of request
			ArrayOfPMin Value	Pmin rerates	New PMin rerate values
			int	reason_code	ISO reason code
			String	reason	Text description
	ArrayOf_AttributeValue	att_values	Optional attribute values that further characterize the request.		
	revisePMinRerateRequest2 Response	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.20 searchByCriteria

Used to page through Outage requests. Differs from the **searchByCriteria2** operation only by object type of the parameters.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
searchByCriteria	searchByCriteriaRequest	Input	int	page_index	Browse page index
			String	requester_id	User certificate common name of the requester.
			ArrayOf_Int	types	Types of requests to return (NEW, CHANGE, CANCEL). Null will return all.
			ArrayOf_String	state_codes	Request states to return (OPEN, ACCEPTED, DENIED). Null will return all.

			dateTime	start_date	Date to begin querying
			dateTime	end_date	Date to end querying
	searchByCriteriaResponse	Output	<i>OutageRequestSearchPage</i>	return	Results page that includes an array of matching Outage requests.
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.21 searchByCriteria2

Used to page through Outage requests. Differs from the **searchByCriteria** operation only by object type of the parameters.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
searchByCriteria2	searchByCriteria2Request	Input	int	page_index	Browse page index
			String	requester_id	User ID of requester
			ArrayOf_Int	types	Types of requests to return (NEW, CHANGE, CANCEL). Null will return all.
			ArrayOf_String	state_codes	Request states to return (OPEN, ACCEPTED, DENIED). Null will return all.
			dateTime	start_date	Date to begin querying
			dateTime	end_date	Date to end querying
			int	date_mode	Search by outage dates, submitted dates, or update dates
			int	res_key	Resource identifier
			int	res_type_key	Resource type
		searchByCriteria2Response	Output	<i>OutageRequestSearchPage</i>	return
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.22 searchByOutage

Searches for Outage requests by ISO Outage ID

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
searchByOutage	searchByOutageRequest	Input	int	<i>outage_id</i>	ISO SLIC Outage ID
	searchByOutageResponse	Output	<i>ArrayOf_OutageRequestData</i>	return	Outage request date values in an array which match the search criteria
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.23 setAvailabilityPointRequest

Automates the creation of a *reviseAvailabilityRequest*

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
setAvailabilityPointRequest	<i>setAvailabilityPointRequest</i>	Input	Int	error_level	Bit flag indicating which warnings should be ignored
			String	user_id	SSL client certificate name of user making request.
			int	outage_id	Structure that describes data changes
			String	comment	Optional text description of request
			<i>int</i>	reason_code	ISO reason code
			String	reason	Text description
			<i>AvailabilityPointValue</i>	pointVal	Availability value
			<i>ArrayOf_AttributeValue</i>	att_values	Request attributes (i.e. Phone Number)
	<i>setAvailabilityPointRequestResponse</i>	Output	int	return	Unique ID for the request. Can be used to track request status
<i>OutageRequestWebServiceException</i>	Fault				

4.4.24 startOutageRequest

Creates a request for beginning an Outage.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
startOutageRequest	startOutageRequestRequest	Input	Int	error_level	Bit flag indicating which warnings should be ignored
			String	user_id	SSL client certificate name of user making request.
			int	outage_id	Structure that describes data changes
			String	comment	Optional text description of request
			dateTime	newDTS	End date/time of outage
			int	reason_code	ISO reason code
			String	reason	Text description
			ArrayOf_AvailabilityPointValue	pointVals	An array of availability point values
	ArrayOf_AttributeValue	att_values	Optional attribute values that further characterize the request.		
	startOutageRequestResponse	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.25 endOutageRequest

Creates a request for ending an Outage.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
endOutageRequest	endOutageRequestRequest	Input	Int	error_level	Bit flag indicating which warnings should be ignored
			String	user_id	SSL client certificate name of

					user making request.
			int	outage_id	Structure that describes data changes
			String	comment	Optional text description of request
			dateTime	newDTS	End date/time of outage
			int	reason_code	ISO reason code
			String	reason	Text description
			ArrayOf_AvailabilityPointValue	pointVals	An array of availability point values
			ArrayOf_AttributeValue	att_values	Optional attribute values that further characterize the request.
	endOutageRequestResponse	Output	int	return	Unique ID for the request. Can be used to track request status
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.26 uploadOutageRequestXML (Deprecated)

Used to send a batch of requests

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
uploadOutageRequestXML	<i>uploadOutageRequestXMLRequest</i>	Input	String	<i>requestXML</i>	XML representation of New Outage Requests. Change, Cancel Outage requests not supported at this time
	<i>uploadOutageRequestXML</i>	Output	String	dts	XML representaion of feedback.
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.27 withdrawOutageRequest

Withdraws an open request by a unique key.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
withdrawOutageRequest	withdrawOutageRequest	Input	String	request_id	The ISO request ID of the Outage request.
			String	user_id	SSL client certificate name of user making request
			String	reason	Text description
	withdrawOutageResponse	Output	void		No return value
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.28 getResourcesValid

Retrieves a list of resources linked to the current user which are also currently valid.

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
getResourcesValid	<i>getResourcesValidRequest</i>	Input			
	<i>withdrawOutageRequestResponse</i>	Output	<i>ArrayOf_PResource</i>	return	An array of pre-resource objects
	<i>OutageRequestWebServiceException</i>	Fault			

4.4.29 getResourcesAll

Retrieves a list of resources linked to the current user

Operation	Message name	type	Parameter data type	Parameter Name	Parameter description
getResourcesAll	getResourcesAllRequest	Input			
	getResourcesAllResponse	Output	ArrayOf_PResource	return	Resource data. For NGR resources ngr_pmax, ngr_pmin, ngr_el_max (energy limit max) and ngr_el_min (energy limit min) values will be included in the response.
	OutageRequestWebServiceException	Fault

4.5 Fault Return

The fault return message is the same for all services; see Section 2.9 for details.

5 RTAM Web Services

5.1 Business Scenario

Outage coordinators can use the RTAM web service to submit the minimum amount of data to request a generator outage or generator availability update.

Additionally, outage coordinators can retrieve availability data and information about active RTAM outages

5.2 Service Level Agreement

The following service level agreement defines the business and technical requirements for service availability and performance.

Service availability	Service level goal is 99.9%.
Expected size of payload (average and maximum)	Variable (1KB to 1MB+)
Expected frequency (average and maximum)	On demand (1/day – 100/day).
Longest time the service can be unavailable before business is impacted	30 minutes
Business impact if is unavailable	External outage coordinators will need to use an alternate means to submit outage data (SLIC Web Client, phone call to the CA ISO)
Expected response time for the service	Variable (.1 sec – 20 sec)
Expected time to exchange	On demand

5.3 Use Model

Not available

5.4 Operation Details

5.4.1 getActiveRTAMOutage

Locates and returns active RTAM-flagged Outages by Resource ID.

Operation	Message name	type	Parameter data type	Parameter Name	Description
getActiveRTAMOutage	<i>getActiveRTAMOutageRequest</i>	Input	<i>String</i>	<i>res_id</i>	Browse page index
	<i>getActiveRTAMOutageResponse</i>	Output	<i>ArrayOf_Name</i>	<i>return</i>	Currently active

			<i>dValueID</i>		RTAM Outages described as Outage ID (ID), Reference ID (Name), Short Description (Value).
	<i>AvailabilityWebServiceException</i>	Fault			Exception error message

5.4.2 getCurrentAvailability

Retrieves the current availability points for the specified resource(s); accepts multiple resource IDs

Operation	Message name	type	Parameter data type	Parameter Name	Description
getCurrentAvailability	<i>getCurrentAvailabilityRequest</i>	Input	<i>ArrayOf_String</i>	<i>res_ids</i>	Browse page index
	<i>getCurrentAvailabilityResponse</i>	Output	<i>ArrayOf_AvailabilityPoint</i>	return	Currently active Availability Point for each specified Resource ID
	<i>AvailabilityWebServiceException</i>	Fault			

5.4.3 setRTAMAvailability

Generates an Outage request in SLIC using the supplied parameters to create availability points; offers two modes of operation:

- Submit a request for a new Outage.
- Submit a request to update an existing Outage.

Operation	Message name	type	Parameter data type	Parameter Name	Description
setRTAMAvailability	<i>setRTAMAvailabilityRequest</i>	Input	<i>String</i>	<i>user_id</i>	SSL client certificate

					name of user making request
		<i>String</i>	res_id		Resource ID
		<i>dateTime</i>	start_date		Start of the time frame
		<i>dateTime</i>	end_date		End of the time frame
		double	MW		Megawatt value
		<i>Int</i>	outage_id		ISO Outage ID, 0 if there is not one.
		<i>String</i>	phone_number		Contact information of user making the request
	<i>getCurrentAvailabilityResponse</i>	Output	<i>int</i>	return	
<i>AvailabilityWebServiceException</i>	Fault				

5.4.4 setRTAMAvailability2

Operation	Message name	type	Parameter data type	Parameter Name	Description
setRTAMAvailability2	<i>setRTAMAvailability2Request</i>	Input	<i>String</i>	<i>user_id</i>	SSL client certificate name of user making request
			<i>String</i>	res_id	Resource ID
			<i>dateTime</i>	start_date	Start of the time frame
			<i>dateTime</i>	end_date	End of the time frame
			<i>dateTime</i>	discovery_time	
			double	MW	Megawatt value
			<i>Int</i>	outage_id	ISO Outage ID, 0 if there is not one.
	<i>String</i>	phone_number	Contact information of user making the request		
<i>getCurrentAvailabilityResponse</i>	Output	<i>int</i>	return		Unique ID for the request. Can be used

					to track request status
	<i>AvailabilityWebServiceException</i>	Fault			

5.4.5 setRTAMAvailability3

Operation	Message name	type	Parameter data type	Parameter Name	Description
setRTAMAvailability3	<i>setRTAMAvailability3Request</i>	Input	<i>String</i>	<i>user_id</i>	SSL client certificate name of user making request
			<i>String</i>	<i>res_id</i>	Resource ID
			<i>dateTime</i>	<i>start_date</i>	Start of the time frame
			<i>dateTime</i>	<i>end_date</i>	End of the time frame
			<i>dateTime</i>	<i>discovery_time</i>	
			ArrayOf_ConfigurationDoubleValue	MW	Array of megawatt value for each resource configuration
			<i>Int</i>	<i>outage_id</i>	ISO Outage ID, 0 if there is not one.
			<i>String</i>	<i>phone_number</i>	Contact information of user making the request
		<i>getCurrentAvailabilityResponse</i>	Output	<i>int</i>	<i>return</i>
	<i>AvailabilityWebServiceException</i>	Fault

6 System Notification Web Services

6.1 Business Scenario

Outage coordinators can use this API to retrieve information about outages that have meet certain alarm conditions.

6.2 Service Level Agreement

The following service level agreement defines the business and technical requirements for service availability and performance.

Service availability	Service level goal is 99.9%.
Expected size of payload (average and maximum)	Variable (1KB to 1MB+)
Expected frequency (average and maximum)	On demand (50/day – 200/day).
Longest time the service can be unavailable before business is impacted	30 minutes
Business impact if is unavailable	External outage coordinators will need to use an alternate means to submit outage data (SLIC Web Client, phone call to the CA ISO)
Expected response time for the service	Variable (.1 sec – 30 sec)
Expected time to exchange	On demand

6.3 Use Model

Not available

6.4 Operation Details

6.4.1 getAllSystemNotifications

Retrieves all system notifications and returns:

- Outages in ETOTIMEOUT that require a start Outage request
- Outages in ETRTIMEOUT that require a start Outage request
- Forced Outages that require submission of a forced Outage report.

Operation	Message name	type	Parameter data type	Parameter Name	Description
-----------	--------------	------	---------------------	----------------	-------------

getLastUpdateTime	<i>getAllSystemNotificationsRequest</i>	Input			
	<i>getAllSystemNotificationsResponse</i>	Output	<i>ArrayOf_NamedValueID</i>	return	An array of named value IDs
	<i>OutageWebServiceException</i>	Fault
