## **Technical Bulletin**

**2010-09-03**

# **Local San Diego Area 25% Minimum Generation Requirement**

**September 21, 2010**

Revised on  
November 5, 2013

The under-frequency import limit constraint SDGE\_PCT\_UF\_IMP\_BG is removed from the ISO real-time and day ahead markets effective on trade day November 15, 2013. The ISO has received from SDG&E a notice of removal of the 75/25 (import/generation) requirement for the San Diego area.

The SDGE\_PCT\_UF\_IMP\_BG constraint will also be removed from the monthly CRR model starting with the December 2013 CRR process. However, the constraint is included in the 2014 annual CRR model since the annual process was already started in August. The SDGE\_PCT\_UF\_IMP\_BG limit will no longer be considered in the ISO transmission planning requirements. This limit is not replaced by another limit and the ISO will not make operational adjustments to honor this limit.
