Re: Notice of Planned Decisional Classification for “Excess Behind-the-Meter Production”

Any objection by the Chairs to this decisional classification is due by February 1, 2019.

This is formal notice of ISO Management’s decisional classification for the “excess behind-the-meter production” initiative. Any objection by the Chairs to the decisional classification is due by February 1, 2019. Otherwise, this initiative will be presented for decision consistent with the classification described below.¹

This initiative does not fall within the authority delegated to the EIM Governing Body because the initiative does not propose changes to either real-time market rules or rules that govern all ISO markets. The proposal is limited to addressing load metering and how load-based charges are allocated to entities within the ISO balancing authority area. The initiative will go to the Board for approval and the EIM Governing Body will have no role in approval.

This classification is consistent with the classification presented in the Briefing on Policy Outlook at the October 30-31, 2018 EIM Governing Body meeting.

The draft final proposal for this initiative is located [here](#). Additional relevant papers for this initiative are located [here](#).

Written stakeholder comments on the draft final proposal, including the proposed classification, were due January 16, 2019. There were no objections to the decisional classification in the draft final proposal.

¹ The process is described in the [Guidance for Handling Initiatives within the Decisional Authority or Advisory Role of the EIM Governing Body](#).
