

California ISO
Shaping a Renewed Future

Decision on Data Release Phase 3

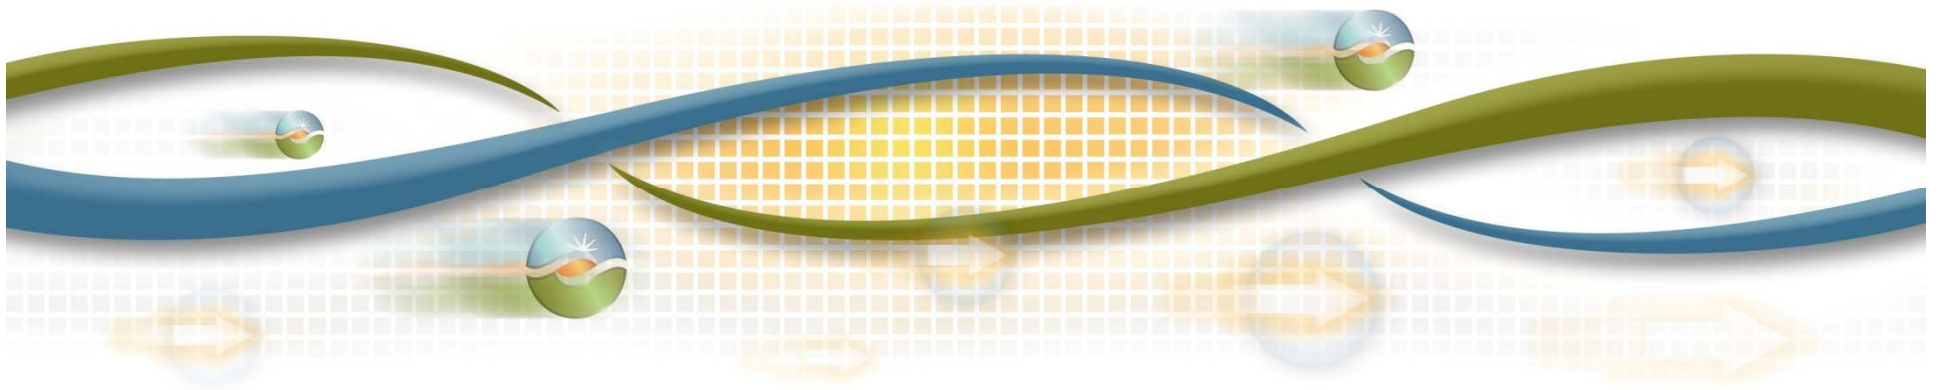

Greg Cook

Director, Market and Infrastructure Policy

ISO Board of Governors Meeting

General Session

May 18-19, 2011

Phase 3 releases additional data to improve market efficiency and transparency.

- Data to support market modeling:
 - load distribution factors
 - shift factors for binding constraints
 - Transmission limits enforced in market
- Forward looking aggregated generation outage report for each trading hub
- Congestion revenue rights auction bid data
- Wind and solar forecast for each trading hub

ISO will establish a new process to address future data release requests.

- Identify data release enhancements
- Address implementation and policy issues
- Use market performance and planning forum to report progress

Stakeholders support the proposal.

- Allows stakeholders to better simulate ISO markets
- Provides a process to efficiently address future data release requests

Management recommends that the Board approve the proposal.

- Additional market model data will improve market efficiency and transparency.
- Forecasting and generation outage data will provide improved visibility to future system conditions.
- Release of congestion revenue rights auction bid data similar to other ISOs.
- New data release process will efficiently address future enhancements.
