ISO Training Schedule

Training Course	Date and time
Operations Notification System (ONS) Tool Training	August 24 9:00am – 10:00am PPT
WA GHG Pre-Market Sim Training	August 28 10:00am - 11:00am PPT
RSEE Phase 2, Track 2 Pre-Market Sim Training	August 29 8:30am – 10:00am PPT
Transmission Registry Upgrade Training	September 6 9:00am – 10:00am PPT
Energy Storage Enhancements Track 2 Pre-Market Sim Training	September 13 10:30am – 12:30am PPT

New! Use our Fall 2023 [Pre-Training Release Survey](#) to submit topics that you would like to see covered in the upcoming training.

Are you looking for more training?

The ISO Learning Center has computer based training available for lots of topics. Check out the Learning Center: <http://www.caiso.com/participate/Pages/LearningCenter/default.aspx>

Release Plan Summary

Fall 2023 Release

- Maximum Import Capability Enhancements
- Washington WEIM Greenhouse Gas Enhancements & Interim Solution Effective May 1, 2023
- WEIM Resource Sufficiency Evaluation Enhancements Phase 2 Track 2 – Post HASP Curtailments
- Energy Storage Enhancements Track 2
- Hybrid Resources 2C – Metered Quantities

Independent 2023 Releases

- Flexible Ramping Product Refinements – Nomogram Constraints
- URL & IP Changes – Application Delivery Resiliency
- Operations Notification System
- Transmission Registry System Upgrade

2024 Releases

- Transmission Service & Market Scheduling Priorities Phase 2
- Transmission Exchange Agreement
- Capacity Procurement Mechanism Tracks 1 & 2
- Hybrid Resources Phase 2C – RIMS
- WEIM Resource Sufficiency Evaluation Enhancements Phase 2 Track 3 – DR Inclusion
- Congestion Revenue Rights System Upgrade

Fall 2024 Release

- Day-Ahead Market Enhancements
- Extended Day-Ahead Market

Fall 2023 – MIC Enhancements

Project Information	Details
High Level Project Scope	<p>The purpose of this initiative is to address potential improvements to either the calculation of Maximum Import Capability or the process used to allocate and track it during Resource Adequacy validation process. This initiative will focus on the following scope items:</p> <ol style="list-style-type: none">1. Additional transparency with making data publicly available2. Inclusion of contractual data from non-CPUC jurisdictional LSEs into the main portfolio3. Request for MIC expansion4. Give “same day priority” to the step 13 unallocated Remaining Import Capability for LSEs with existing RA Contracts5. Update Tariff and BPM language to be consistent with current approved practice
BPM Changes	Reliability Requirements, Transmission Planning Process, Market Instruments

Fall 2023 – WA WEIM GHG Enhancements - Overview

Project Information	Details/Date
High Level Business Problem or Need	<p>Pursuant to State of Washington’s recently revised Clean Air Act and beginning in 2023, Washington (WA) will require reporting of emissions associated with Western Energy Imbalance Market (WEIM) transactions. Emissions reporting is a key element of Washington’s new cap-and-invest program that sets a limit on overall carbon emissions in Washington and requires emitters to obtain allowances equal to their covered GHG emissions.</p> <p>This initiative comprises the first phase of enhancements to support reporting WEIM transactions for emissions year 2022. As reporting rules continue to develop, additional enhancements outside of the scope of this initiative will likely be necessary.</p>
High Level Project Scope	<ul style="list-style-type: none"> • Identify resources within WA State boundary • Update WA State associated resources’ greenhouse gas (GHG) reference levels with dynamic pricing using vendor-provided indices <ul style="list-style-type: none"> • Note: while Tariff stipulates use of static pricing as an interim measure prior to the first Washington allowance auction, due to implementation timing, this is not anticipated to be necessary. This first auction is scheduled for February 28, 2023. • Calculate and publish monthly projected GHG prices for Washington State • Develop reports to support WEIM Entity annual reporting to Washington State
BPM Changes	Energy Imbalance Market (EIM), Market Instruments
Tariff Changes	Sections 30.4.4.5, 30.4.5.2, 39.6.1.6.2, 39.7.1.1.1.1, 39.7.1.1.1.2, 39.7.1.1.1.4
Impacted Systems	MF, Internal System, SIBR, OASIS

Fall 2023 – WA WEIM GHG Enhancements - Overview

System	High Level Changes
MF	<ul style="list-style-type: none">• New rule to verify that relevant resources within WA State must provide resource specified GHG emission rate• New attribute at the BAA level to identify BAAs associated with Washington State• New attribute to associate resources within WA State with the State of WA to identify resources with GHG obligation<ul style="list-style-type: none">• Exception: BPA—not subject to WA reporting rule
Internal System	<ul style="list-style-type: none">• Reference level (commitment costs/DEBs) changes to reflect GHG costs<ul style="list-style-type: none">• DEBs to include GHG components for generators inside WA State• Update GHG startup cost curve for resources inside WA State• Update Greenhouse Gas Minimum Load Cost Allowance• Differentiate between CA and WA resources• Capture WA GHG price in the resource-specific minimum load and startup GHG adders for the purposes of commitment cost calculations
SIBR	<ul style="list-style-type: none">• Receive startup GHG adders for the purposes of commitment cost calculations for WA State resources• Confirm GHG curves generated for WEIM resources within WA State are successfully received and processed
OASIS	<ul style="list-style-type: none">• Add WA GHG index prices to existing GHG Index Price OASIS report<ul style="list-style-type: none">• Only applicable for dynamic GHG pricing

2023 – WA WEIM GHG Enhancements – Interim Solution

- ✓ **Effective May 1, 2023**, the CAISO has implemented an alternative interim solution to activate functionality in the Washington WEIM GHG Enhancements initiative.
- The alternative interim solution would allow SCs for resources in Washington to reflect their GHG costs in the default energy bids and commitment costs.
- This effectively activates the tariff language for this initiative and the alternative interim solution will remain in effect until it is replaced with the full initiative implementation later this year. We don't expect the interim solution to delay the implementation of the full functionality.

Fall 2023 – WEIM Resource Sufficiency Evaluation Enhancements Phase 2

Track 2

Project Information	Details
High Level Project Scope	<ul style="list-style-type: none"> • Track-2 <ul style="list-style-type: none"> • Item2A – Clarification of Post-HASP Block Hour Low-Priority Export <ul style="list-style-type: none"> • Operator-Driven Low-Priority Export Curtailment <ul style="list-style-type: none"> • CAISO operator’s ability to initiate pro-rata curtailment based on identified MW, given the following priority order: <ul style="list-style-type: none"> • RTECON (RT economic hourly block export schedules that clear HASP). • RTLPT (RT Self-Schedule hourly block export schedules not backed by Generation from non-RA Capacity and cleared HASP). • Non-high-priority DA export [i.e. DAECON (DA economic hourly block export schedules that clear both RUC and HASP), or DALPT (DA hourly block export schedules not backed by Generation from non-RA Capacity that also cleared both RUC and HASP and are protected Self-Schedules)] • CAISO operator’s ability to identify/filter exports by market priority types as well as “Firm Provisional Energy (G-FP)” eTag identifier. • Publish resource-specific market priority types and their associated MW data to ADS. • Item2B – Develop MF resource identification Capacity Test Failed-to-Start Rule Exemption flag to allow SCs of WEIM and CISO short start units that start with non-positive telemetry to identify specific resources that will be exempted from this functionality in RSE Capacity test. (Implemented in Phase 1 – enhancements needed)
BPM Changes	WEIM, Market Instruments, Market Operations
Tariff Changes	Yes
Impacted Systems	MF, Market, ITS, ADS

Fall 2023 – WEIM Resource Sufficiency Evaluation Enhancements Phase 2 Track 2

System	High Level Changes
MF	<ul style="list-style-type: none"> • Definition and Submission of Resource-Specific Capacity Test Failed-to-Start Rule Exemption Flag via GRDT • Make Resource-Specific Capacity Test Failed-to-Start Rule Exemption flag accessible to downstream systems.
ITS	<ul style="list-style-type: none"> • Clarification of Post-HASP Block Hour Low-Priority Export • Consume DAM Resource-Specific Market Priority Types and Resource-specific RUC Energy Awards from RUC. • Consume All Resource-Specific Market Priority Types from RTM. • SCs shall be required to submit Misc Info field Prior Type attribute for “Firm Provisional Energy (G-FP)” e-tags to identify RTECON, DAECON, RTLPT, DALPT. • SCs shall be required to submit Misc Info field Prior Type attribute for “Firm Energy (G-F)” e-tags to identify RTPT, DAPT. • Validate submitted export e-Tags against data received from RUC and RTM to approve/deny and adjust (if warranted) the submitted e-Tags.
Market	<ul style="list-style-type: none"> • Access Resource-Specific Capacity Test Failed-to-Start Rule Exemption flag from MF. • Exempt Specific Resources from Capacity Test Failed-to-Start Rule/Functionality. • Clarification of Post-HASP Block Hour Low-Priority Export • Broadcast All Resource-specific market priority types to ITS (from RTM).
ADS	<ul style="list-style-type: none"> • Clarification of Post-HASP Block Hour Low-Priority Export <ul style="list-style-type: none"> • Consume Resource-Specific Market Priority Types and their Associated MW Data from RTM. • Publish Resource-Specific Market Priority Types and their Associated MW Data. • Include Resource-Specific Market Priority Types in ADS Query Functionality.

Fall 2023 – WEIM Resource Sufficiency Evaluation

Enhancements Phase 2 Track 2 BRS 1.2

Updated for:

- Section 1.3 (Scope), Section 4 (Details of Business Need/Problem), Section 5.1 (Business Practice Manual (BPM)), Section 5.2 (Other)
 - Updated to add CMRI publishing of market priority types MW schedules breakdown for export resources.
- RSEE2-BRQ-02040 (Track-3) – Item3A
 - Updated to only support 5-min granularity submission (removed 15-min and hourly granularity).
- RSEE2-BRQ-02160 (Track-3) – Item3A
 - Updated to only support 5-min granularity data for submitted, included and excluded LF Adjustments (removed 15-min and hourly granularity).
 - Updated to support 5-min granularity adjustment for Percentage of the submitted Non-Participating DR Schedules that are included in ALFS LF.
 - Removed Existing System Functionality.
- RSEE2-BRQ-02170 (Track-3) – Item3A
 - Updated to only account for the 5-min granularity data for the hourly-aggregate calculations (removed 15-min and hourly granularity).
 - Updated to add calculation for the hourly aggregate of Percentage of the submitted Non-Participating DR Schedules that are included in ALFS LF.
 - Updated to add an example for the calculations.
- RSEE2-BRQ-03060 (Track-1) – Item1C
 - Corrected to remove Track-2 from the BRQ ID since the eTag submission requirements are now in Track-1.
- RSEE2-BRQ-03160 (Track-2) – Item2A
 - Updated to add verbiage of not overloading the scheduling limits resulted from eliminating the exports counter-flow on them due to the exports curtailments.
- RSEE2-BRQ-03180 (Track-2) – Item2A
 - Added for the logic of not violating the scheduling limits resulted from eliminating the exports counter-flow on them due to the exports curtailments.
- RSEE2-BRQ-08560, RSEE2-BRQ-08580 (Track-2) – item2A
 - Added for CMRI publishing of market priority types MW schedules breakdown for export resources.
- Appendix-B: Formulas, Calculation Details, and Examples
 - Added Track-2 – Logic of Operator-Driven Export Curtailment without Violating Scheduling Limits.

Fall 2023 – Energy Storage Enhancements Track 2

Project Information	Details
High Level Business Problem or Need	<p>This initiative evolves processes and systems to help storage resource scheduling coordinators better manage resource state of charge and continue to ensure efficient market outcomes. The purpose of this initiative is to enhance reliability tools and the co-located model with regards to storage resources. The reliability enhancements include updates to bidding rules, exceptional dispatch of storage resources, storage resource opportunity costs, and local area minimum online constraints. The co-located model enhancements include preventing co-located resources from charging when beyond generation levels for on-site resources and allowing pseudo-tied resources to use the co-located model. The scope of Track 1 covered the enhancements for Summer 2023 Release. The remaining scope in the Energy Storage Enhancements Policy is covered in Track 2 for Fall 2023 Release.</p>
High Level Project Scope	<p>Reliability Enhancements</p> <ul style="list-style-type: none"> • Include lost opportunity from not generating in storage compensation due to hold Exceptional Dispatch (ED) to hold SOC (i.e. 0 MW ED) <ul style="list-style-type: none"> • Calculate counterfactual energy revenues with and without the SOC hold ED • If prices are below bids counterfactuals will not include discharges • Use actual LMPs (the ISO will not generate counterfactual LMPs) • Include SOC hold ED period through the end of the day in time horizon • Allow for Exceptional Dispatches (EDs) to be issued for storage resources to hold SOC <ul style="list-style-type: none"> • Develop functionality within ED User Interface; automate existing excel tool functionality • Storage may receive a traditional ED or an SOC ED, but not both <p>Co-Located Model Enhancements</p> <ul style="list-style-type: none"> • Develop an electable co-located model available to all storage resources <ul style="list-style-type: none"> • Storage schedules to never exceed renewable schedules (i.e. no grid charging) • Storage may deviate down to match solar, when solar is producing less than schedules in real-time • Deviations to be subject to imbalance energy charges • Require storage resources to submit outages when depleted and unable to charge • Require all resources to respond to operator and ED instructions within physical bounds of operation • Allow for co-located pseudo-tie resources to apply Aggregate Capability Constraint (ACC) <ul style="list-style-type: none"> • Resources under an ACC must be pseudo-tied from the same BAA
BPM Changes	Market Operations, Settlements & Billing
Impacted Systems	Settlements, Market, CMRI, RIMS, MF, OASIS, ADS, OMS, ITS

Fall 2023 – Energy Storage Enhancements Track 2

System	High Level Changes
Market	<ul style="list-style-type: none"> Allow operator to enter exceptional dispatch (ED) in the market to allow for EDs of storage resources by SOC in addition to capacity Update the definition of EDs to allow the operator to enter EDs for storage resources identified with two new Reason Codes under Instruction Type: System Emergency (“SYSEMR”)
ADS	ADS consumes new ED Reason Codes (“SOC Hold” and “SOC Charge”) applicable to storage resources
Settlements	<ul style="list-style-type: none"> New rules to align with Tariff settlement language for SOC formula New inputs for the storage resource ED opportunity cost values Design and configure new charge code for the allocation of ED SOC uplift Modify real-time bid cost recovery (BCR) charge code to account for revenue from storage resources ED SOC uplift Configure No Pay rules and assessment for ED SOC
CMRI	Receive and shall publish the ED SOC information using new UI and API on a new report entitled “Exceptional Dispatch Hold State of Charge”
OASIS	Receive and publish new ED reason Codes (“SOC Hold” and “SOC Charge”) under System Emergency Instruction Type as “Reason” on the Operator Initiated Commitment OASIS Report
RIMS	<ul style="list-style-type: none"> Add field for storage resource duration (hours) Add field for calculated MWh Calculate energy (MWh) using duration*MW Allow pseudo tied resources to be modeled as co-located
MF	<ul style="list-style-type: none"> Apply co-located flag to pseudo tied resources Set minimum ACC constraint to zero for co-located resources that cannot or choose not to not grid charge New MF attribute to denote resources that select to not grid charge
OMS	Storage resources must submit outage cards if: <ul style="list-style-type: none"> The co-located VER cannot provide the charging energy as forecasted per Tariff requirements System shall require storage resources to submit outage cards if the resource has depleted its SOC and there is no ability to charge the resource per Tariff requirements
ITS	System shall model pseudo-tied and dynamic co-located storage resources following the standard NRI pseudo-tie and dynamic rules and practices Note: pseudo-tied and dynamic storage resources must be registered as TNGR resources

Energy Storage Enhancements Stakeholder Workshop

The California ISO held a public hybrid stakeholder workshop for Energy Storage Enhancements on August 3, to discuss functionality for modeling regulation awards for storage resources.

During this meeting, the ISO and stakeholders discussed the planned implementation for state of charge equation in the Summer 2023 Release, unintended consequences from that implementation and possible alternative modeling implementations. The ISO discussed the proposed changes to include regulation awards in the state of charge equation that had the observed outcomes from the Market Simulation testing environment when this change was introduced there. The ISO also discussed potential alternative methods that could be used to model storage resources that receive awards for ancillary services.

The video is available here: <https://youtu.be/3CjBhBNdezW>

Comments were due August 17, 2023

Fall 2023 – Hybrid Resources 2C Metered Quantities for Hybrids

Project Information	Details/Date
High Level Project Scope	<p>System (MRI-S) shall allow the SC of a Hybrid resource the ability to submit Metered Quantities on a component ID only, which would override the current Metered Quantities. This ability shall be made available regardless if the resource is ISO Polled or SCME.</p> <p>Implementation note: ISO Polled or SCME based on the MasterFile flag.</p> <p>New data type: ISOME</p>
Impacted Systems	MRI-S

Phase 1: Deployment for new API URLs

- CAISO previously sent communications on the soft cutover for the new API URLs in the MAP Stage environment. Market Participants are required to validate access and transition to the new API URLs before August 15, 2023 (tentative date). Targeted outreaches will be sent this week to organizations that are still using the old API URLs in MAP Stage. For Production, there are no changes to the API URLs; however, the IP addresses will be changed. Please stay tuned for more information.

Phase 2: Deployment for new UI URLs

- Starting on July 27, 2023, some of the ISO applications will be available for testing starting in the MAP Stage environment, Stage, and then Production. Application access is based on the user's provisioning. No application down time is expected. We will send another communication for the remaining UI URLs once they are ready for validation.

Action requested:

- Market Participants can begin accessing the new UI URLs in parallel with the current UI URLs for a window of time.
- The timeline to validate access and transition to the new UI URLs for each environment is shorter than the API timeline; therefore, action is needed sooner.
- Once the new UI URLs are deployed into Production, Market Participants have 30 business days to validate and transition to the new UI URLs.

Acceptable Use Policy Implementation Update

We have a global rate limit of 30/sec across the ws endpoint in mapstage which is 1800 connections per minute. The rate limit is 30/sec across all the apps combined supported on the endpoint. This allows for connections from multiple apps concurrently. There are additional protections within the apps.

Applications CMRIAPI, DRRSEWS and STLMTEWS(MRI-S) send soap fault when acceptable use policy fails.

Soap Fault snippet,

2024 – Transmission Service & Market Scheduling Priorities Phase 2

Project Information	Details
High Level Business Need	Presents a long-term, durable framework to establish wheeling through scheduling priorities in the ISO markets that can further evolve with operational experience. It does not focus on, nor does it change, the processes for wheeling out or exporting from the ISO BAA.
High Level Project Scope	<p>The following are the key design elements of the proposed framework for establishing wheeling through scheduling priority across the ISO system:</p> <ul style="list-style-type: none"> • Calculating Available Transfer Capability (ATC) in Monthly & Daily Increments • Accessing and Reserving ATC • Transmission study and expansion process • Application of priorities in post-HASP process • Compensation framework for wheeling through scheduling priority
BPM Changes	<ul style="list-style-type: none"> • Market Instruments • Market Operations • Reliability Requirements • Settlements and Billing • Transmission Planning Process • Generator Interconnection and Deliverability Allocation Procedures
Tariff Changes	<p>Sections:</p> <ul style="list-style-type: none"> • §23.1, §23.2, §23.3, §23.4, §23.5, §23.6, §23.7 • §26.1.4.5 • §30.5.1 • §34.12.3 • §Appendix A • §Appendix L
Impacted Systems	<ul style="list-style-type: none"> • AIM • System for ATC calculation, access, and reservation • SIBR • RTM • Settlements • OASIS • ITS

2024 – Transmission Exchange Agreement

Project Information	Details/Date
High Level Business Problem or Need	<p>The TEA is expiring in 2024 and absent WAPA’s ability to resell their capacity on the Pacific AC Intertie (“PACI”) #1 line which is owned and operated by WAPA-SNR and within the CAISO BAA they will move the line to the BANC BAA and the ISO will lose 1200 MW transfer capability at Malin.</p>
High Level Project Scope	<ul style="list-style-type: none"> • WAPA needs functionality to sell their TOR (using ETC/TOR terminology instead of CRN) to other parties on their OASIS. • If the TOR rights are sold then WAPA will notify the CAISO to provide the purchaser the hedging and scheduling priority opportunity provided all ETCs/TORs. • The market and settlement systems need to be able to “move” the CRN from the WAPA CRN to the purchaser SCIDs so that the settlement to the purchaser SCID reverse the costs of transmission access charge and congestion (aka the perfect hedge) and the IFM and RTM provide a high scheduling priority. • WAPA will not take on the obligation to settle with their purchaser. • WAPA can sell any increments of MWs up to their 400 MW ownership rights. Therefore, the solution needs to be flexible enough to allow the “existing” TORs to vary the MWs capabilities. [Note: We can require restrictions, if required – e.g. no less than 5 MW increments] • WAPA’s functionality allows them to schedule between Malin and Round Mountain, and Malin and Tracy. This would be the source and sink that that functionality needs to provide. • If there are outages on the line, the curtailment should be consistent with current practice.

2024 – Hybrid Resources 2C RIMS

Project Information	Details/Date
<p>High Level Business Problem or Need</p>	<p>The ISO launched this stakeholder initiative to identify new or enhanced market rules and business processes needed to accommodate hybrid resources, resources that consist of two sets of market rule changes that will facilitate mixed-fuel type (hybrid and co-located resources) project participation in the ISO markets.</p> <p>Prior to this initiative, Phase 1 identified a first set of modifications generally concerned with setting up and operating co-located resources.</p> <p>Building on phase 1, Phase 2 focuses on modifications that will explore how hybrid generation resources can be registered and configured to operate within the ISO market. The initiative will further develop solutions allowing developers to maximize the benefits of their resource’s configuration. Additionally, hybrid resource configurations also raise new operational and forecasting challenges that the ISO plans to address during this initiative.</p>
<p>High Level Project Scope</p>	<p>With this initiative, there’s an opportunity to increase storage and the number of hybrid resources that can connect to the ISO grid. Currently the interconnection queue includes more than 24,000 MW of mixed fuel projects and nearly 20,000 MW of storage which represents roughly half of all generation in the current interconnection queue.</p>

Congestion Revenue Rights (CRR) Upgrade

Project Information	Details/Date
High Level Project Scope	<p>The Congestion Revenue Rights (CRR) system was implemented by CAISO in 2008 as part of the Market Redesign and Technology Upgrade (MRTU) implementation. The current CRR system is at its end of life, does not have the flexibility to accommodate future policy changes and requires the ISO to calculate data and run processes manually outside the current system to produce a successful CRR Auction.</p> <p>The CAISO has decided on a significant upgrade of the existing CRR system and adopt the latest technology stack aligned with CAISO's technology standards, consolidate all CRR related functions, minimize human errors, reduce processing time, eliminate manual workarounds, and positions the system to accommodate policy changes down the road.</p> <p>Congestion Revenue Rights (CRR) system replacement project scope is the roll-out of a:</p> <ul style="list-style-type: none"> • Brand new user-interface (UI) system with an updated new look-and-feel, to replace the existing legacy system implemented during the MRTU 2008 go-live and brought up to current ISO technology standards • Set of application-programming interfaces (APIs) to enable integration between ISO and market participant systems <p>Overall, to support the following in one consolidated CRR external-facing system:</p> <ul style="list-style-type: none"> • Annual/Monthly Auction and Allocation market participant bid submission and results retrieval • Load data submission by CRR LSEs, CEC • Load migration data submission by CRR UDCs • Secured "Congestion Revenue Rights Full Network Model" information access • Private and public access of CRR market input and output information
BPM Changes	<p>Congestion Revenue Rights</p> <ul style="list-style-type: none"> • Enhancements made to the new CRR product. • Automatic publishing of CRR market results. • Automatic CRR notification. • New CRR schedule calendar. • New CRR FNM access. • New CRR data submission and download interface UI/API. • New CRR market results interface. • Load Migration
Tariff Change	<p>No</p>
Impacted Systems	<p>CRR, AIM, CMRI, OASIS, CTS, Market Clearing, EMMS, IFM/RTN, MQS, Master File, MPP, Settlements, WebOMS, ETCC.</p>

Congestion Revenue Rights (CRR) Upgrade

Updated May 25, 2023

*Exact cutover date TBD

CRR System Upgrade – Get Connected

- CRR meetings:
 - **Bi-weekly Technical User Group (TUG)** Tue 10 AM, alternates with RUG.
 - Meetings available on the CAISO calendar on www.caiso.com
 - Meeting details and presentation materials are available on the CAISO Developer site at www.developer.caiso.com , which requires an account to be setup for access
 - **CRR Customer Partnership Group**
 - **Next CPG meeting is Wed, 9/20 @ 10 AM**
 - Monthly
 - Meetings available on the CAISO calendar on www.caiso.com
 - Meeting details and presentation materials are available on www.caiso.com > Stay Informed > Meetings & Events > Customer Partnership Groups

Fall 2024 – Day Ahead Market Enhancements

Project Information	Details/Date
<p>High Level Business Problem or Need</p>	<p>In recent years, Variable Energy Resource (VER) have gained significant traction in the energy grid, playing a crucial role in achieving renewable energy targets and reducing greenhouse gas emissions. However, their increasing presence has introduced a new challenge energy imbalances between the Day Ahead and Real Time markets.</p> <p>Another reason for the energy imbalance is the day-ahead market operates on hourly time increments, whereas real-time market schedules energy in 15 and 5-minute intervals. This discrepancy in granularity results imbalances since the rea-l-time market schedules fluctuate within the hour while day-ahead market schedules remain fixed for the entire hour.</p> <p>These imbalances necessitates out-of-market interventions by operators, such as forecast biasing and dispatches, to uphold grid reliability. However, this situation presents an opportunity to improve our market software, enabling us to achieve a more efficient and economical solution while addressing the variability and reliability concerns within the market.</p>
<p>High Level Project Scope</p>	<p>Enhance the California ISO’s (CAISO’s) day-ahead market by:</p> <ul style="list-style-type: none"> • Introducing an imbalance reserve (IRU/IRD) product to provide flexible capacity to account for real-time ramping needs • Enhancing the residual unit commitment process to also ensure there is sufficient downward dispatch capability (RCU/RCD) • Enhancing the day-ahead market to maximize benefits of greater West-wide diversity in the day-ahead optimization for Western Energy Imbalance Market participants
<p>BPM Changes</p>	<p>Settlements and Billing, Market Instruments & Market Operations</p>
<p>Tariff Changes</p>	<p>Sections 27, 31, 34, 39</p>
<p>Impacted Systems</p>	<p>MF, SIBR, DAM, OASIS, CMRI, Settlements & Internal Systems</p>

Fall 2024 – Day Ahead Market Enhancements

System	High Level Changes
MF	<ul style="list-style-type: none"> Define IRU, IRD, RCU, RCD eligibility for the resource ID in MF.

Fall 2024 - Extended Day Ahead Market (EDAM) Implementation

Project Information	Details/Date
High Level Business Problem or Need	<p>The purpose of this initiative is to create a comprehensive extended day-ahead market that extends over multiple balancing authority areas (BAAs) participating in the WEIM. EDAM is a voluntary day-ahead electricity market with the potential to deliver significant economic, environmental, and reliability benefits for participants across the West. EDAM will more efficiently and effectively integrate renewable resources and address the significant operational challenges presented by a rapidly changing resource mix, emerging technologies, and the impacts of climate change. EDAM will enable procurement of robust supply and flexible capacity that will position EDAM participants to effectively address changes in conditions from day-ahead to real-time, improving their response to potential reliability challenges. EDAM builds upon the proven ability of the Western Energy Imbalance Market (WEIM) to increase regional coordination, support state policy goals, and cost effectively meet demand..</p>
High Level Project Scope	<p>The EDAM design leverages existing features of the ISO day-ahead market that are common in other day-ahead markets across the country. The design also considers enhancements proposed in contemporaneous stakeholder initiatives, that will harness flexibility across the larger footprint by incorporating an imbalance reserve product, and that will enhance price formation. EDAM introduce new products, imbalance reserve and reliability capacity, as well as new penalties, RSE surcharge.</p>
BPM Changes	<ul style="list-style-type: none"> Definitions and Acronyms Energy Imbalance Market (EIM) Market Instruments Market Operations Settlements and Billing EDAM

Fall 2024 – DAME & EDAM BRS Comments

- To provide feedback, please submit CIDI case
 - Set ‘Functional Environment’ = “*Market Simulation Fall 2024*”
 - Set ‘Subject’ = “*BRS Comments for <Project (DAME, EDAM, etc.)>*”
 - Customers do not need to submit a CIDI case for each comment; one CIDI case with all the comments and/or an attachment is acceptable
 - The ISO will collect the CIDI cases and respond in a controlled manner

Stay Informed

Ways to participate in releases

- Visit the Release Planning page
 - <http://www.caiso.com/informed/Pages/ReleasePlanning/Default.aspx>
- Attend meetings
 - Release Users Group (RUG) bi-weekly meetings
 - Initiative status updates
 - System change updates on independent releases
 - Market Simulation calls
 - Visit the ISO calendar at www.caiso.com for meeting dates and times and add events to your calendar
 - Typically held on Mondays and Thursdays
 - Market Performance and Planning Forum
 - Bi-monthly review of market performance issues
 - High level discussion of release planning, implementation and new market enhancements

What to look for on the calendar...
