Fall 2019 – Commitment Cost and Default Energy Bid Enhancements **Project Info** Details/Date Scope: Enhances the ability to submit market-based commitment cost bids in order to reflect unique costs and volatility: Support integration of renewable resources through incentivizing flexible resources participation during tight fuel supply Account for costs of flexible resources (gas and non-gas) to reduce risk of insufficient cost recovery Encourage participation of non-RA and voluntary EIM resources; compliance with FERC Order 831 • Raises energy bid cap from \$1,000/MWh to \$2,000/MWh: Requires supporting verified costs of energy bids above \$1,000/MWh · Introduces market power mitigation (MPM) measures for commitment costs. Impacted Systems: SIBR: Incorporate negotiated default commitment bids, allow the submittal of Ex Ante cost adjustments. Increase commitment cost caps, increase energy bid caps, incorporate soft energy bid cap. Allow for hourly submittal of **Application Software** minimum load bids into day-ahead market. Changes • IFM/RTM: Add MPM tests for commitment costs. Mitigate commitment costs where tests indicate market power. Incorporate MPM (both energy and commitment) in short term unit commitment process. Recalibrate the penalty price parameters in response to raising energy bid cap to \$2,000/MWh. CMRI: Provide resource-specific reporting on mitigation results for commitment costs. Provide additional source information for default bids. MQS/PCA: Incorporate mitigation of commitment costs for specific exceptional dispatch (ED) types. Incorporate bid locking of commitment costs for ED instructions and for certain cases where resources are uneconomic to operating. Master File: Allow submittal of resource-specific minimum load costs for costs that are independent of the Pmin level. Add the ability to indicate preference for new negotiated cost basis type. Provide a view of resourcespecific scalars used for validating Ex-Ante cost adjustments.

Fall 2019 – ESDER 3

	Project Info	Details/Date
		Scope:
		The ESDER 3 initiative will include four (4) demand response enhancements:
	 New bidding options for demand response resources Removal of single LSE requirement for PDR registrations & removal of default load adjustment (DLA) Addition of a Load Shift Product wherein demand response resources with behind the meter (BTM) storage devices can participate in both load consumption and load curtailment. Enable sub-metered electric vehicles supply equipment (EVSE) to participate in load curtailment 	
		Impacted Systems (Overview):
	Application Software Changes	 Master File: RDTs for PDR registrations in MF will require selection of an effective Bid Option to be used for market optimization and dispatch Registration of new PDR Resource Types and business rules for PDRs with BTM storage devices and wanting to participate in both Load Curtailment and Consumption Two (2) Resource IDs will be assigned to the same Resource to allow Consumption versus Curtailment participation (PDR-LSR)
		 DRRS: PDR registrations will not require all service accounts to have the same LSE New PDR Resource types will be added for the Load Shift Product (PDR-LSR)
		 SIBR: Will apply new price criteria for PDR bids and reject those not meeting the applicable criteria Will not allow Bid Options to be changed in SIBR
		 HASP/RTM: Will use effective Bid Option registered in MF (e.g., 5-min, 15-min or Hourly) for market optimization and dispatch instructions Will broadcast new PDR energy schedules/awards and instructions to CMRL and/or ADS

Will broadcast new PDR energy schedules/awards and instructions to CMRI and/or ADS
