

# **CDWR Comments on Flexible Capacity Needs assessment 2017**

**April 26, 2016**

California Department of Water Resources appreciates the opportunity to submit its comments on the 2017 Flexible Capacity needs study results. CDWR submits following comments respectfully:

1. CDWR requests details of calculation on 2017 flexible capacity allocation. CDWR needs the calculation details for its own internal use including validation of allocation results.
2. Please clarify with example how the 3 hours load ramps are calculated? Is the same calculation method used for flexible capacity needs assessment and flexible capacity allocation?
3. CDWR supports negative load ramp credits to be provided to LSEs under FRACMOO -2 initiative.
