California ISO posts new computer-based training for public use Courses on ISO website explain electricity markets and power grid operations

FOLSOM, Calif. – The California Independent System Operator (ISO) has released a new batch of six training modules on the power transmission system and markets, available on its website.

The courses, part of a larger library of computer-based training (CBT) sessions, are designed to educate general audiences about the inner workings of its wholesale electricity markets and the energy grid.

The library includes a newly produced “ISO Orientation,” an overview of the role of an independent system operator in the power generation and delivery network. Other modules focus on the day-ahead and real-time markets, resource data, emergency response procedures, and outages.

The new CBTs are housed alongside existing modules covering the Western Energy Imbalance Market (EIM), and Congestion Revenue Rights.

The training allows the public - including the media, legislators, industry stakeholders, and prospective market participants – to get a clear understanding of power generation, transmission, wholesale pricing, and delivery in the western states region.

To view all the CBT modules, visit the [Learning Center](#) on the ISO website, www.caiso.com.

Thanks for re-posting!

The California ISO provides open and non-discriminatory access to one of the largest power grids in the world. The vast network of high-voltage transmission power lines is supported by a competitive energy market and comprehensive grid planning. Partnering with about a hundred clients, the nonprofit public benefit corporation is dedicated to the continual development and reliable operation of a modern grid that operates for the benefit of consumers. Recognizing the importance of the global climate challenge, the ISO is at the forefront of integrating renewable power and advanced technologies that will help meet a sustainable energy future efficiently and cleanly.
