Decision on capacity procurement mechanism enhancements track 1

Greg Cook
Executive Director, Market Policy Development

ISO Board of Governors Meeting
General Session
March 23, 2023
Backstop capacity procurement during tight summer conditions identified need for process enhancements

- Capacity procurement mechanism (CPM) authority is used to address resource adequacy deficiencies and other reliability concerns, including significant events

- Existing rules can impede significant event CPM designations, even when capacity is available

- Proposal removes certain procurement restrictions to provide more access to uncontracted capacity
Management proposes limited changes to allow procurement of resources otherwise unavailable for full amount of CPM designation

- Allow for flexibility of MW quantity assigned for significant event CPM designations
  - Enables reductions to significant event CPM awards when the designation period overlaps with upcoming alternative commitments such as prior CPMs, resource adequacy or reliability must run contracts
  - Authority currently exists for exceptional dispatch CPM awards

- Allow significant event and exceptional dispatch CPM designated capacity to take on new resource adequacy obligations after the CPM designation has been accepted
  - New RA obligations must be shown to the ISO as RA capacity through the regular RA showing process
  - Non-RA commitments cannot be made after the ISO makes a CPM designation
Proposal allows resources ability to accept short-term significant event CPM designations when the designated capacity is unavailable for full term of CPM designation

**Status Quo**
- Commitment to non-ISO counterparty
- 30-day significant event CPM designation
- Resource unable to accept 30-day CPM designation

**Proposal**
- Commitment to non-ISO counterparty
- 15-day significant event CPM designation
- Resource accepts 15-day CPM designation
Management also proposes to improve CPM reporting and noticing

- Enhance CPM designation reporting by using the open access same-time information system (OASIS)
- Extend the CPM designation market notice deadline from two business days to five business days to ensure sufficient time for accurate reporting
Stakeholder Feedback

- Stakeholders were generally supportive of the initiative

- Proposal was modified to address stakeholder feedback
  - Included proposal to allow significant event and exceptional dispatch CPM designated capacity to take on new resource adequacy after the CPM designation
  - Added flexibility for resources, “at the discretion of the resource scheduling coordinator”, to accept shorter-term significant event CPM designations.
Management recommends the ISO Board of Governors approve the CPM enhancements track 1 proposal

Changes will allow the ISO to benefit from the ability to access more uncontracted capacity in the CPM process and improve CPM process efficiency and accuracy
