## REVISION HISTORY

<table>
<thead>
<tr>
<th>VERSION NO. (Must match header)</th>
<th>DATE</th>
<th>REVISED BY</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.8</td>
<td>4/13/2022</td>
<td>EDAS(MU)</td>
<td>Revised instructions around Fieldwork Request Tool. A “Request - …” only requests a meter form to have certain information prepopulated on the form and does not request for a fieldwork appointment date.</td>
</tr>
<tr>
<td>2.7</td>
<td>2/23/2022</td>
<td>EDAS (MU)</td>
<td>Revised language around Meter Seals on Forms. All Meter Seal information is always required regardless of the work. Even if work is done remotely and no seals are cut, Seals should still be verified and entered on the form. If a seal is not required then “NA “ is entered, no other variations and no blank fields are accepted for Seal Number information.</td>
</tr>
<tr>
<td>2.6</td>
<td>1/27/2022</td>
<td>EDAS (MU)</td>
<td>Clarification added to RIG Disaggregations</td>
</tr>
<tr>
<td>2.5</td>
<td>12/16/2021</td>
<td>EDAS (MU)</td>
<td>Included instructions on how to complete Programmed losses fields and verbiage to state that the Remarks Section of Meter Forms is required.</td>
</tr>
<tr>
<td>2.4</td>
<td>11/4/2021</td>
<td>EDAS (MU)</td>
<td>Added additional verbiage regarding Meter IP Changes and appointment requests. Added Instructions for Rescheduling fieldwork appointments using the Request Tool.</td>
</tr>
<tr>
<td>2.3</td>
<td>7/27/2021</td>
<td>EDAS (MU)</td>
<td>Added additional verbiage regarding fieldwork. IP Changes cannot be scheduled any earlier than the Friday of the following week after acceptance of either Meter Config for Meter IP Changes and RIG Details for RIG IP Changes. IP Changes also cannot be supported on Thursdays or during the week of a target Model Promotion.</td>
</tr>
<tr>
<td>2.2</td>
<td>3/31/2021</td>
<td>EDAS (MU)</td>
<td>Added Quick Reference Guides for Meter Replacements</td>
</tr>
<tr>
<td>2.1</td>
<td>3/26/2021</td>
<td>EDAS (MU)</td>
<td>Added Quick Reference Guides for RIG Replacements and RIG Disaggregations</td>
</tr>
<tr>
<td>2</td>
<td>2/3/2021</td>
<td>EDAS (MU)</td>
<td>Added Appendix, Quick Reference Guides for fieldwork</td>
</tr>
<tr>
<td>1.9</td>
<td>1/21/2021</td>
<td>EDAS (MU)</td>
<td>Updated to add Procedure for adding additional meters to an existing Resource</td>
</tr>
<tr>
<td>1.8</td>
<td>9/8/2020</td>
<td>EDAS (MU)</td>
<td>Updated Procedure for PMax Changes</td>
</tr>
<tr>
<td>1.7</td>
<td>11/19/2019</td>
<td>EDAS (MU)</td>
<td>Updated included matrix for Projects, sections for canceling and rescheduling appointments</td>
</tr>
<tr>
<td>1.6</td>
<td>8/2/2018</td>
<td>EDAS (MU)</td>
<td>Updated procedure for RIMS project details form</td>
</tr>
<tr>
<td>1.5</td>
<td>7/16/2018</td>
<td>EDAS (MU)</td>
<td>Updated procedure for RIMS project details form</td>

</tbody>
</table>
INTRODUCTION
The purpose of this document is to provide guidelines relevant to the procedures required when performing device (Meter or RIG) fieldwork.

Preparation
All meter work will require an ISO Project Code and therefore the submittal of a Project Details Form to RIMS. **One Project Code is required per Device.** Depending on the type of RIG work being performed, it may or may not require an ISO Project Code.

Matrix:

<table>
<thead>
<tr>
<th>Device</th>
<th>Type of Work</th>
<th>RIMS Project Required (Y/N)</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>
• Opening a New Meter Project with NRI
  □ The NRI Guide and Checklist can be found online at: http://www.caiso.com/participate/Pages/NewResourceImplementation/Default.aspx
  □ Obtain a new project registration code via the RIMS public site and follow the links provided in the registration email.
  □ A link to the latest Project Details Form version will be provided in the registration email.
  □ Complete the RIMS Project Details Form
    • New Resources coming into the ISO
      o Project Details form must be completed in its entirety as required by the type of project

• Meter and RIG Projects
  □ Section 1:
    • For Meter Replacements or Adding Additional Meters to an Existing Resource – Select “Meter Replacement” from the drop down menu
    • For Meter Maintenance, Meter Reprogram, Re-Inspection or Communication Change – Select “Meter Maintenance” from the drop down menu
    • For RIG Reconfigurations, RIG Replacements, RIG IP Changes or to Add a Backup IP Address – Select “RIG Reconfiguration” from the drop down menu
  □ Section 2: Complete Parts A through G
    • Part F: Please enter the site name as listed on the Meter Service Agreement (MSA). NOTE: The system will not accept an exact name match with another project in RIMS. you may receive an error requesting a revision in name. (Adding a phrase at the end may help, for example: Power Powerhouse Maintenance 2020)
Part G: Please include the **Device ID** and **Resource ID** in the project description as well as a detailed description of the work. For example “Meter Calibration” or “RIG Frequency Response Points addition”

***If adding additional meters to an Existing Resource, you must include the following in the project description – **Adding (number of meters) Meters to Resource (Resource ID)**”. Example: “Adding 4 Meters to Resource CAISO_2.Unit1”

- Sections 3: Complete parts A-C
- Section 6: Complete Part A (Date expected to complete the work)
- Section 7: Complete Parts A through C

☐ Save, upload and submit the Project Details Form in Word .docx format to RIMS using the registration code to access.

☐ You will receive an email with the project code, the User Access Administrator will need this project code in order to provision access for RIMS Users for this project in RIMS.

☐ The NRI project code will be the number you will use to upload your documents to NRI utilizing the proper file naming conventions outlined in the New Resource Implementation Guide.
EDAS APPOINTMENTS
All Revenue Meter and Real Time Device fieldwork must be scheduled with Energy Data Acquisition Systems (EDAS) through the EDAS Request Tool.

Requirements
The following requirements must be met for EDAS to support fieldwork:

- An approved appointment is required to perform any fieldwork related (Real Time Device and/or Metering) activities.
- Outage(s) must be scheduled for the date and time of the appointment through the Outage Management System (OMS) upon receiving an appointment confirmation.
- Any required documentation must be accepted via RIMS, i.e. Meter Config for New Meters or Meter Replacements; RIG Details for New RIGS, IP Address changes or addition of a Backup IP Address.

Note: No exceptions, unless the work in question is deemed an emergency by the ISO to support the operation of the grid.

Appointment Availability
All related fieldwork shall be performed during normal business hours.

- Monday – Thursday, 08:00 AM to 12:00 PM, 13:30 PM to 16:00 PM
- Closed daily for lunch from 12:00 PM to 13:00 PM
- A list of available dates and work supported is located on the right hand side of the EDAS Request Tool. (Note: Meter Maintenance work is not supported during the months of November and December unless deemed required or supported by documentation in order for the device to remain compliant)
- Note RIG and Meter IP Changes cannot be supported on Thursdays or during the week of a target Model Promotion.

Cancellations or Reschedules
Cancellations and Reschedules must be communicated to EDAS. Please do this by replying to the confirmation email.
Request Form
The Online Request Form is used to associate your Project Code to a Device. Each Device must have its own approved request. Once a Project Code is associated to a Device, that Project Code can no longer be used for any other devices. For meter replacements, the tool must be used in order to retrieve your replacement Device ID. NOTE: Each Project Number/Code must have its own appointment scheduled

1. Contact Details: All fields in this section are required
   a. Contact Name
   b. Contact Phone
   c. Contact Email

2. Details: Certain fields are required based on the Request Type selected
   a. Resource Name is required
   b. Request Type is required. Based on the Request Type, blue text will appear below the drop down to indicate what fields are required. 
     (Note: only a single Resource ID, Device ID or Project Code will be accepted).

Request Type drop down provides two types of selections, prefixes are: “Test -” and “Request -”

i. When selecting “Test -” in the Request Type drop down you must enter a desired test date. You will receive an email if the requested date is available. If your requested date is not available, you will receive an email with the next 3 available dates. The 3 available dates may only be available for a short time; please resubmit a request with one of the 3 dates immediately to assure that you can reserve the desired testing date. After the testing date is reserved, a final confirmation email with the testing date and time will be sent.

ii. When selecting “Request -” in the Request Type drop down you will receive an email attachment of the form that was requested, filled out with current CAISO data if available. This does not request for a fieldwork appointment. You will have to use the “Test -” type of request mentioned above. Also note that for some Devices, no data or incorrect data may be pre-populated on the form. It is the responsibility of the Meter inspector to ensure the data is correct and accurate on the form that is officially submitted to CAISO for the project.
iii. Request Types:

1. Test – New Site/Device/Points Point to Point: Schedules a Point to Point Test for New Resources onboarding with CAISO, or New RIG and/or Meter equipment for an Existing CAISO Resource.

2. Test – Meter Replacement: Schedules an appointment to Replace an existing CAISO Certified Meter. This option will issue a Replacement Device ID.

3. Test – Meter Maintenance/Troubleshooting: Schedules an appointment to complete any work on a CAISO Meter; Reprogram, CT/PT Changes, Calibration etc.

4. Test – Meter Maintenance (IP Change): Schedules an appointment to perform a meter communication change, i.e. IP or Phone Number change.

5. Test – RIG Replacement: Schedules an appointment to Replace an existing RIG

6. Test – RIG Certificate Renewal: Schedules an appointment to renew a RIG Certificate

7. Test – RIG Maintenance/Troubleshooting: Schedules an appointment to complete any RIG Work.

8. Test – Communication Maintenance/Troubleshooting: Schedules an appointment for support when conducting any network work that will impact data to the CAISO.

9. Request – MSVS Form” Requests an MSVS form only. Will associate the Project code and Device ID and populate a form. It will not schedule an appointment

10. Request – Meter Replacement MSVS Form: Will associate the Project code and newly assigned Device ID and populate a form. It will not schedule an appointment

11. Request – Meter Maintenance Form: Will associate the Project code and Device ID and populate a form. It will not schedule an appointment

12. Device IP Request: Will provide the IP associated with the Device.

13. Reschedule Appointment: Used to Reschedule an already approved appointment request
EXAMPLE OF COMPLETED FORM

List of Work Type

- Test - New Site Point to Point
- Test - Meter Replacement
- Test - Meter Maintenance/Troubleshooting
- Test - RIG Replacement
- Test - RIG Certificate Renewal
- Test - RIG Maintenance/Troubleshooting
- Request - Calendar Date
- Request - MSYS Form
- Request - Meter Replacement MSYS
- Request - Meter Maintenance Form

If you need to include additional information, please add it to the Description of Work field.

For "Test" type, a date is required for an appointment. For "Request" type, for a form only request leave blank. For "Request" for a form & test date, date is required.

Click on Submit Request
The requester shall be able to view the summary page after the preferred appointment date has been submitted. An email will be sent to the submitter (Contact Email provided) either confirming or denying the request.

If the submitter would like to schedule another appointment, there is an option at the bottom of the screen to perform this function.
Confirmations
An email will be sent out to the contact email provided and Project Contacts (if any) with either a confirmation of a scheduled or declined appointment request along with the appointment details or details of why the appointment was not scheduled. If the request a declined, follow the directions in the email and submit a new request, or if instructed, email EDAS.

Cancellations and Reschedules
If you need to Cancel an appointment, please reply to the confirmation you received from EDAS and request to cancel.

A Cancellation is defined as the work was canceled and no longer needed at all in which case you must also request to cancel the project in RIMS as well. No further work and appointments should be scheduled under that project.

For a Reschedule, if you wish to change the time of the appointment, use the EDAS Request Tool and Select Reschedule Appointment option in the Request Type dropdown field. Enter the Original Request Number you wish to reschedule in the Resource Name field and a valid Resource ID, Device ID or Project Code that matches the original request. Select the Desired Test Date and submit the request. Note that this will only work for a request number that was already approved and has not been completed.

RIG FIELDWORK
For a new RIG, IP Change or addition of a Backup RIG IP, a RIG Details Form will be required to be submitted into RIMS and accepted in order to be placed into the Scope for the changes.

For any fieldwork pertaining to the RIG, EDAS must first be contacted to verify the OMS Outage is active. EDAS will provide instructions for providing updates as required and manually override any values as necessary. If performing work that requires a Point to Point check, EDAS will administer the validation. Upon completion of the work, if not already done so, EDAS must be notified of the completion and/or of any issues still existing.
METER FIELDWORK

New Installations, Meter Replacements, IP Changes or Programming changes which will impact the ISO’s Meter interrogation software require a Meter Configuration Worksheet to be uploaded to RIMS and accepted at least 5 business days prior to the appointment.

For a Meter Replacement, submit a request via the EDAS Request Tool. For the Device ID, enter in the Device ID being replaced. A New Device ID will be assigned and provided upon validation and in the email correspondence sent to the requestor from the EDAS Request Tool.

Prior to starting any work on a meter, the ISO Meter Inspector must contact EDAS, confirm the OMS outage is Active and retrieve Hand Held Files (HHFs) from the meter. If meter work affects real time data to the ISO, periodic updates must be made as instructed by EDAS.

New Installs, Meter Replacements and certain Meter Reprogramming will require a Point to Point test administered by EDAS.

Upon completion of the work, contact EDAS to confirm communication and/or telemetry is restored and to provide detailed updates on the status of the project.

The proper meter documentation must be submitted to RIMS within 5 business days of the work being completed. Please use the most up to date forms which can be found on our website at:

http://www.caiso.com/participate/Pages/MeteringTelemetry/Default.aspx
METER FORMS
There are 2 Metering Forms: Meter Maintenance and Meter Site Verification Sheet (MSVS).

This section will cover the important fields that will be required to successfully complete and submit the 2 new metering forms.

**Review**: Once the MSVS form is uploaded and submitted to RIMS, EDAS will review verify and validate the form.

**Un-Accepted**: If the submitted meter documentation contains any errors, it will be unaccepted. The RIMS User contacts of the project will receive an auto generated email notification from EDAS on the specific errors. Responsible parties shall either make the appropriate corrections to the form or take corrective actions to resolve any issues. RIMS User shall submit an updated version of the MSVS or Meter Maintenance form to NRI using the proper naming convention and versioning. The Review and Accept or Un-Accepted process will continue until a valid metering form is accepted.

**Accept**: Once the meter documentation passes validation, it will be accepted. EDAS will route the document (MSVS or Meter Maintenance) to the required signatories such as: Installer, Programmer, Inspector, and the Site Owner via DocuSign for signatures. All parties must sign the documents via DocuSign. After the complete execution of the MSVS or Meter Maintenance form, a copy will be available to all signing parties via DocuSign. For New Installs (New Projects coming into the ISO) the MSVS is required as part of meter validation to process the Certificate of Compliance (CoC).

*Please submit the MSVS and Meter Maintenance forms in Microsoft Word Format. PDF formats will not be accepted. Signatures are accepted only through DocuSign.*

For Helpful Hints, select the desired field on the form and press F1. A popup window will appear with a description and/or instructions for that field.
**Fields and Definitions**

**New Install:** Meters in which the Site has not achieved ISO Commercial Operation. Or New meter being added to an Existing Resource, such as the addition of a feeder meter or backup meter. If a meter is repurposed, i.e. converting to a Line Loss Meter.

**Meter Replacements:** Existing ISO Meter is replaced with a new meter. Meter is not changing location or being repurposed in any way.

**Meter Reprogram:** Any changes to the meter programming to include but not limited to: addition or removal of a DCF, Line and/or transformer loss changes, Multiplier changes etc. NOTE (if Reprogramming requires changes to the ISO's Revenue Quality Meter Data System, such as a meter changing from a 4ch to 6ch, 6ch to 4ch, changes to the Meter Multiplier and/or Pulse Multiplier will require a New Device ID to be assigned by the ISO)

**Meter Maintenance:** Calibration, Battery Replacement, Troubleshooting etc.

**Communication Changes:** Changes to the meter communication such as IP address, Modem Number or Port changes

**Re-Inspection:** Any changes which result in the re-inspection of a meter where it does not constitute reprogramming or equipment changes. For example, removal of non ISO meters within the same circuit of the ISO meter in which no physical or programming changes are made to the ISO meter, however burdens are affected.

- **Project Information:**
  - New Meter Device ID: For New Installs and Meter Replacements
  - NRI Project Code: Project Number received from NRI through RIMS
  - Meter Designation: Type of meter selected from dropdown list, i.e. Main, Backup, Aux etc.
  - Meter Name (Optional): Name of the meter, i.e. Gen 1, Gen 2, T1, L1, Feeder 1 etc.
  - Existing Meter Device ID: Required for Meter Replacement, Re-Program or Re-Inspection

- **Facility Information:**
  - Site Name: Generator Project Name
  - Facility Address, City, State, Zip: Physical address of plant
  - Site Contact Name and Phone: Name and phone number for an individual on site

- **CAISO Revenue Metering and Communication Information:**
- Inspection Type: Type of inspection performed selected from dropdown list, i.e. Test – New Site/Device/Points Point to Point, Request - Meter Replacement etc. Note: Meter Maintenance Form is used for Meter Main
- Net MW: POR MW (For the Resource)
- Site Aux MW: Aux MW for site
- Distance to POR: Distance to ISO POR in miles
- Meter kV: Metered voltage
- Interconnect kV: Voltage at which site is interconnected
- Meter Manufacturer: Manufacturer of Meter
- Meter Model: Model of Meter
- Meter Serial Number: Serial Number of Meter
- Form: Meter Form
- 3W Delta or 4W Wye: Check if 3W Delta or 4W Wye
- Modem Communication: Check only if the meter is communicating via a dial up connection
- CAISO Polled Meter: Check if meter is ISO polled

- Instrument Transformer Correction Factors:
  - Enter values if CTs/VTs do not met ISO requirements otherwise leave blank.

- Tested and Programmed Transformer and Line Loss Compensation Values:
  - Enter both Tested and Programmed losses if transformer and/or transmission line losses are programmed and tested
  - Programmed losses should match what is provided on the PORCalc document. Form only handles 4 decimal places, any digits after this are truncated (do not round)

- Transformer and/or Line Loss & Distribution Compensation Factor (DCF):
  - Loss: Select Yes if losses are programmed in the meter, No if no losses are programmed
  - DCF: If the site qualifies for a DCF, select the appropriate percentage programmed in the meter. If no DCF is programmed select None

- CAISO Revenue Meter Seal Information:
  - Complete All fields with the As Left and As Found seal numbers. Enter the seal number in its entirety. If a field is not applicable, Enter “NA” (DO NOT ENTER “N/A”, “N A”, “Not Applicable” and DO NOT LEAVE BLANK)

- Voltage and Current Transformer Information:
Enter all information for VT and CTs. If a 3 Wire Delta connection, B phase fields should be left blank and any list boxes should remain defaulted to say Select.

- **Test Standard Information:**
  - All Test Standard information is required if a calibration test is performed.

- **Meter Calibration Test Results and Record:**
  - If a meter calibration test is performed, all information is required.

- **Inspector Information and Final Remarks:**
  - Enter detailed description of work. This is a required field.

- **Installer, Programmer, Inspector and Site Owner Information:**
  - All information for the Installer, Programmer, Inspector and Site Owner are required. DO NOT provide a signature. Emails provided will be used to route the document for signatures via DocuSign.
  - Dates should be in chronological order, i.e. Inspection completion must not be before the installation or Programming and the date of Owner review completed must not be before the date of inspection.
Meter Site Verification Sheet (MSVS)
This section will outline the documentation Requirements of the MSVS

- **New Install and Meter Replacement**
  - Complete the Following Sections
    - All Sections of the MSVS are required: Complete all fields
      - Meter Replacements must include both the New Device ID and Existing Device ID

- **Meter Reprogram**
  - Complete the Following Sections
    - Sections 1 through 9: Complete all fields
      - Reprograms must include the Existing Device ID, New Device ID field should be left blank
    - Sections 10 through 12: Complete if applicable
    - Section 13: Complete the following
      - If No Installer Leave all Installer fields blank, otherwise complete all Installer fields
      - Complete all fields for Programmer, Inspector and Site Owner

- **Re-Inspection**
  - Complete the Following Sections
    - Sections 1 through 9: Complete all fields
      - Reprograms must include the Existing Device ID, New Device ID field should be left blank
    - Sections 10 through 12: Complete if applicable
    - Section 13: Complete the following
      - If No Installer Leave all Installer fields blank, otherwise complete all fields
      - If No Programmer Leave all Programmer fields blank, otherwise complete all Programmer fields
      - Complete all fields for Inspector and Site Owner
• PMax Change
  □ Complete the Following Sections
  - If No Inspection required
    • Sections 1 through 3: Complete all fields
    • Section 4: Complete Meter information
    • Section 8: Complete All Seal Information. If there is a seal that is not required then enter “NA”
    • Section 12: Enter any Remarks, this is a required field
    • Section 13: Complete all fields
      ○ Leave all fields for Installer, Programmer and Inspector blank
      ○ Complete all Site Owner information
  - If an Inspection is required
    • Sections 1 through 3: Complete all fields
    • Sections 4 through 6: Complete all applicable information
    • Sections 6 and 7: Complete if applicable
    • Section 8: Complete All Seal information. If there is a seal that is not required then enter “NA”
    • Sections 9 through 11: Complete if applicable
    • Section 12: Enter any remarks, this is a required field
    • Section 13: Complete all Inspector and Site Owner Information

Upload and submit the completed form to RIMS

File Naming convention should be as follows:
(Project Code) MSVS (Device ID) ver(#)
Example:
16GENXXXX MSVS 590000 ver1
16METERXXXX MSVS 2900000 ver1
Meter Maintenance Form

This section will outline the documentation Requirements when meter maintenance is performed on a Certified ISO Meter.

- **Meter Maintenance**
  - Complete the Following Sections
    - Sections 1 through 3: Complete all fields.
    - Section 4 through 6: Complete all applicable information
    - Section 7: Complete All Seal information. If there is a seal that is not required then enter “NA”
    - Sections 8 and 9: Complete all information if meter was tested. If not tested, leave all information blank
    - Sections 10 and 11: Complete all information

- **Communication Change, Load Provider Change**
  - Complete the following Sections
    - Section 1, 2 and 3: Complete all fields.
    - Section 4, 5 and 6: Leave as is (Not applicable)
    - Section 7: Complete All Seal information. If there is a seal that is not required then enter “NA”
    - Sections 8 and 9: Leave as is (Not applicable)
    - Section 10: Remarks section is required to describe the work and changes completed
    - Section 11: Complete all fields
      - If No Inspection was required
        - Leave Inspector Information Blank
        - Complete all Site Owner Information
      - If Inspection was required
        - Complete all Inspector and Site Owner Information

Upload and submit the completed form to RIMS

File Naming convention should be as follows:
(Project Code) Meter Maintenance (Device ID) ver(#) 
Example:
16METERMTXXXX Meter Maintenance 5900000 ver1

APPENDIX: QUICK REFERENCE GUIDES
CT/PT Related Fieldwork
Will this result in any changes to the Meter Programming, cutting of CAISO Meter Seals or the changing of an Instrument Transformer?

One project is required per meter.
If YES please complete the following:

1. Get Access to RIMS

2. Create METERMT (Meter Maintenance) project(s) in RIMS. In the Project Description include the Resource ID, Device ID and provide a description of the work.

3. Provision access to the project in RIMS. Please contact UAARequests@caiso.com for assistance regarding access to RIMS projects.

4. Submit a Fieldwork request for Meter Maintenance/Troubleshooting. Please refer to the appropriate section in this guide for specific instructions regarding fieldwork.
   a. EDAS Request Tool: [http://www.caiso.com/fieldworksupport/Pages/default.aspx](http://www.caiso.com/fieldworksupport/Pages/default.aspx)

5. Create an OMS outage upon confirmation for the date and time of the appointment.

6. On date and time of appointment:
   a. Ensure OMS is active
   b. Obtain clearance from EDAS at the start of appointment to begin work
   c. Perform work
   d. Test with EDAS if applicable (Onsite during the work there should be a CAISO Authorized Inspector to confirm the programming change, verify any equipment changes and remove/replace seals)

7. Terminate OMS once work is completed.

8. Complete relevant documentation: Meter Site Verification Sheet (MSVS) and submit into RIMS

9. Form will be validated and then routed to relevant parties for signature.

10. Execute MSVS form. Once fully executed, EDAS will accept the document in RIMS.

11. Project Status will be updated to Completed in RIMS by EDAS.
Updating Meter IP Addresses

One project is required per meter.

To complete a Meter IP Change, complete the following:

1. **Get** access to RIMS
   - RIMS QuickStart Guide

2. **Create** METERMT (Meter Maintenance) project(s) in RIMS. In the **Project Description** include the **Resource ID**, **Device ID** and provide a description of the work.

3. **Provision** access to the project in RIMS. Please contact UAARequests@caiso.com for assistance regarding access to RIMS projects.

4. **Submit** a Fieldwork request for **Meter Maintenance (IP Change)**. Please refer to the appropriate section in this guide for specific instructions regarding fieldwork.
   - EDAS Request Tool: http://www.caiso.com/fieldworksupport/Pages/default.aspx
   - The appointment must be scheduled a minimum of 21 days out from the day the request is being made.

5. **Complete the following**:
   - **Notify** EDAS of intent to change to IP address. EDAS will mark the MeterConfig as required for the project(s) created.
   - **Submit** MeterConfig document into RIMS. This should be done no less than one week from the date the change is expected to occur.
   - MeterConfig:
     http://www.caiso.com/Documents/MeterConfigurationWorksheet.docx

6. **For Changes to Static Public IP**: Upon acceptance of the Meter Config, the appointment must be scheduled no earlier than the Friday of the following week. IP Changes cannot be supported on Thursdays or during the target week of a Model Build.

7. **Create** an OMS outage upon confirmation for the date and time of the appointment.

8. **On date and time of appointment**:
   - **Ensure** OMS is active
   - **Obtain** clearance from EDAS at start of appointment to begin work
   - **Implement** change.
   - **Test** with EDAS

9. **Terminate OMS** once work is complete

10. **Complete Meter Maintenance Form** and submit via **RIMS**. Refer to the appropriate section of this guide for instructions on completing the form.

11. **Form** will be validated and then routed to relevant parties for signature.

12. **Execute** Meter Form. Once the Meter Maintenance form is fully executed, EDAS will accept the document in RIMS.

13. **Project** Status will be updated to Completed in RIMS by EDAS.
Meter Maintenance

One project is required per meter.
To complete a Meter Maintenance, complete the following:

1. Get access to RIMS
   a. RIMS QuickStart Guide

2. Create METERMT (Meter Maintenance) project(s) in RIMS. In the Project Description include the Resource ID, Device ID and provide a description of the work.

3. Provision access to the project in RIMS. Please contact UAARequests@caiso.com for assistance regarding access to RIMS projects.

4. Submit a Fieldwork request for Meter Maintenance. Please refer to the appropriate section in this guide for specific instructions regarding fieldwork.
   a. EDAS Request Tool:
      http://www.caiso.com/fieldworksupport/Pages/default.aspx

5. Create an OMS outage upon confirmation for the date and time of the appointment.

6. On date and time of appointment:
   a. Ensure OMS is active
   b. Obtain clearance from EDAS at start of appointment to begin work
   c. Perform meter work.
   d. Notify EDAS when work is completed

7. Terminate OMS once work is complete

8. Complete Meter Maintenance Form or Meter Site Verification Sheet (MSVS) depending on the type of inspection performed and submit via RIMS. Refer to the appropriate section of this guide for instructions on completing the form.

9. Form will be validated and then routed to relevant parties for signature.

10. Execute Meter Form. Once the Meter Maintenance form is fully executed, EDAS will accept the document in RIMS.

11. Project Status will be updated to Completed in RIMS by EDAS.
Meter Replacement(s)

One project is required per meter.
To complete a Meter Replacement, complete the following:

1. **Get** access to RIMS
   - **RIMS QuickStart Guide**

2. **Create** METER (Meter Replacement) project(s) in RIMS. In the **Project Description** include the **Resource ID**, **Device ID** and provide a description of the work.

3. **Provision** access to the project in RIMS. Please contact **UAARequests@caiso.com** for assistance regarding access to RIMS projects.

4. **Submit** a **Fieldwork** request for **Meter Replacement**. Please refer to the appropriate section in this guide for specific instructions regarding fieldwork. A new **Device ID** will be issued and provided in confirmation email.
   - **EDAS Request Tool:**
     - [http://www.caiso.com/fieldworksupport/Pages/default.aspx](http://www.caiso.com/fieldworksupport/Pages/default.aspx)
   - Each Project Number/Code must have its own fieldwork appointment scheduled.

5. **Create** an **OMS** outage upon confirmation for the date and time of the appointment.

6. **On date and time of appointment:**
   - **Ensure** OMS is active
   - **Obtain** clearance from EDAS at start of appointment to begin work
   - **Implement** change.
   - **Test** with EDAS

7. **Terminate** OMS once work is complete

8. **Complete** **Meter Site Verification Sheet (MSVS)** and submit via **RIMS**. Refer to the appropriate section of this guide for instructions on completing the form.

9. **Form** will be validated and then routed to relevant parties for signature.

10. **Execute** Meter Form. Once the Meter Maintenance form is fully executed, EDAS will accept the document in RIMS.

11. **Project** Status will be updated to Completed in RIMS by EDAS.
Updating RIG IP Address, including adding a Backup IP Address

If changing ECN or ANIRA IP Addresses, ATT may require you open a RIG project first when requesting the service. On average, the process can take 2-3 weeks. Timing with Database deployments may extend that time.

To update an IP address for a RIG, complete the following:

1. **Get access to RIMS**

2. **Create** RIG project in RIMS. In the **Project Description** include the **Resource ID**, **Device ID** and provide a description of the work.

3. **Provision** access to the project in RIMS. Please contact [UAARequests@caiso.com](mailto:UAARequests@caiso.com) for assistance regarding access to RIMS projects.

4. **Submit** RIG Details Form into RIMS
   b. If the New IP address is for a Public (Non ECN or ANIRA) address, then there is approximately a one week lead time before the change can occur.
   c. Requests are processed weekly Monday through 3pm Friday at for implementation on Thursday of the following week.

5. **Upon** acceptance of the RIG Details, EDAS will coordinate with your team and CAISO EMS to agree on a date for the IP change.

6. **For changes to Static Public IP:** Upon acceptance of RIG Details, the appointment must be scheduled no earlier than the Friday of the following week. IP Changes cannot be supported on Thursdays or during the target week of a Model Build.

7. **Submit** a **Fieldwork** appointment for **RIG Maintenance/Troubleshooting** for the date agreed upon. Please refer to the appropriate section in this guide for specific instructions regarding fieldwork.
   a. EDAS Request Tool: [http://www.caiso.com/fieldworksupport/Pages/default.aspx](http://www.caiso.com/fieldworksupport/Pages/default.aspx)

8. **Create** an **OMS** outage upon confirmation for the date and time of the appointment.

9. **Provide** a meeting invite and call in number or a point of contact EDAS will communicate with on the date of the change.

10. **On date and time of appointment:**
    a. **Ensure** OMS is active
    b. **Obtain** clearance from EDAS at start of appointment to begin work
    c. **Implement** changes
    d. **Test** with EDAS

11. **Terminate** OMS once work is complete

12. Once all work is completed successfully, EDAS will update the Project Status to Completed in RIMS.

Exemption Form: [http://www.caiso.com/Documents/TelemetryExemptionRequestForm.docx](http://www.caiso.com/Documents/TelemetryExemptionRequestForm.docx)
Adding Points to a RIG

In order to add points to an existing RIG, follow the below steps. Depending on the type of points and impact, it may or may not be deployed as part of the FNM Schedule.

1. **Get** access to RIMS

2. **Create** RIG project in RIMS (one project per Device). In the **Project Description** include the Resource ID(s), Device ID and specify what Points are being added. (Example: “Frequency Response”, “AGC” etc. If multiple things are being covered under the same appointment, include all relative work. Example: “Frequency Response and TLS Update”).

3. **Provision** access to the project in RIMS. Please contact UAARequests@caiso.com for assistance regarding access to RIMS projects.

4. **Submit** RIG Details Form into RIMS

5. **Upon** acceptance of the RIG Details, EDAS will assign a Model, Create and Send the Points List to the RIMS project contacts. A copy of the RIG Points will also be available for download in RIMS.

6. **If** part of a model build, refer to the FNM Schedule for deployment date. If not part of a model build, EDAS will communicate deployment date that points will be ready for testing.

7. **Submit** a Fieldwork appointment for a **New Site/Device/Points Point to Point Test** appointment. Date should be on or after the deployment date.
   a. EDAS Request Tool: [http://www.caiso.com/fieldworksupport/Pages/default.aspx](http://www.caiso.com/fieldworksupport/Pages/default.aspx)
   b. Each Project Number/Code will need its own fieldwork appointment scheduled.

8. **Create** an OMS outage upon confirmation for the date and time of the appointment.

9. **Provide** a meeting invite and call in number or a point of contact EDAS will communicate with on the date of the change.

10. **On the date and time of appointment:**
    a. **Ensure** OMS is active
    b. **Obtain** clearance from EDAS at start of appointment to begin work
    c. **Test** with EDAS

11. **Terminate** OMS once work is complete

12. **Once** all work is completed successfully, EDAS will update the Project Status to Completed in RIMS.
RIG Replacement

In order to Replace a RIG, follow the below steps.

1. **Get** access to RIMS

2. **Create** RIG project in RIMS (one Project per RIG). In the **Project Description** include the **Resource ID**, **Device ID** and specify that it is a RIG Replacement.

3. **Provision** access to the project in RIMS. Please contact UAARequests@caiso.com for assistance regarding access to RIMS projects.

4. **Submit** RIG Details Form into RIMS

5. **After** acceptance of the RIG Details, **Submit** a **Fieldwork** appointment for a **RIG Replacement** appointment.
   a. EDAS Request Tool: [http://www.caiso.com/fieldworksupport/Pages/default.aspx](http://www.caiso.com/fieldworksupport/Pages/default.aspx)

6. **Create** an **OMS** outage upon confirmation for the date and time of the appointment.

7. **Provide** a meeting invite and call in number or a point of contact EDAS will communicate with on the date of the change.

8. **On the date and time of appointment:**
   a. **Ensure** OMS is active
   b. **Obtain** clearance from EDAS at start of appointment to begin work
   c. **Test** with EDAS

9. **Terminate** OMS once work is complete
10. **Once** all work is completed successfully, EDAS will update the Project Status to Completed in RIMS.
RIG Disaggregation

In order to perform a RIG Disaggregation (Removing Points from an existing RIG and putting them on a new RIG) follow the below steps.

1. **Get** access to RIMS

2. **Create** RIG project in RIMS (one project per Resource ID). In the **Project Description** include the Resource ID, Device ID and specify what RIG the Resource is being removed from. Please contact UAARequests@caiso.com for assistance regarding access to RIMS projects.

3. **Submit** RIG Details Form into RIMS

4. **Upon** acceptance of the RIG Details, EDAS will assign a Model, Create and Send the Points List to the RIMS project contacts. A copy of the RIG Points will also be available for download in RIMS.

5. **Refer** to the FNM Schedule for deployment date.

6. **Submit** a **Fieldwork** appointment for a **New Site/Device/Points Point to Point Test** appointment. Date should be on or after the deployment date.
   a. EDAS Request Tool: [http://www.caiso.com/fieldworksupport/Pages/default.aspx](http://www.caiso.com/fieldworksupport/Pages/default.aspx)
   b. Each Project Number/Code will need its own fieldwork appointment scheduled.

7. **Create** an **OMS** outage upon confirmation for the date and time of the appointment.

8. **Provide** a meeting invite and call in number or a point of contact EDAS will communicate with on the date of the change.

9. **On the date and time of appointment:**
   a. **Ensure** OMS is active
   b. **Obtain** clearance from EDAS at start of appointment to begin work
   c. **Test** with EDAS

10. **Terminate** OMS once work is complete

11. **Once** all work is completed successfully, EDAS will update the Project Status to Completed in RIMS.

12. **Note** CAISO should receive Telemetry data from both the Old/Previous RIG and New RIG in parallel until CAISO confirms that the Modeling for the Market has moved from the Old/Previous RIG to the New RIG (typically within the next 2 subsequent model builds after P2P Testing has been completed)
