

Summary of Issues to Discuss on MSC Proposal

- MSC proposal is participating load with direct participation
- Without using a participating load resource it is simply non-participating load in the imbalance market
- With non-participating load:
 - Pre-day ahead arrangement doesn't seem to work
 - No ability to participate in AS or RUC market
 - Baseline can be anything. No ability to distinguish what was demand response and what is virtual bidding
- Is this proposal what PDR should be currently, a desired end state with PDR as an interim solution or is it a separate product that serves a different purpose?
