

**"No Potential DGD worksheet" for SDG&E service territory
(all values in Megawatts unless otherwise noted)**

A		B	C	L	P
DG Node		Transmission Level KV	DG in Base Portfolio	Potential DGD	Notes
Substation					
ASH	69	20.01	0.00		Every node in SDG&E contributes to the Path 43 (North of SONGS) deliverability constraint that has been identified in generation interconnection studies. Upgrades to relieve the constraint have been removed from Cluster 1&2 Phase II studies and Cluster 3&4 Phase II studies. Therefore, there is no potential DGD at SDG&E nodes.
