Dear Secretary Bose:

Enclosed please find one original and fourteen copies of the Thirty-Ninth Status Report of the California Independent System Operator Corporation on Re-Run Activity filed in the above-captioned dockets.

Also enclosed are two extra copies of this cover letter to be time/date stamped and returned to us by the messenger. Thank you for your assistance. Please contact the undersigned if you have any questions regarding this filing.

Sincerely,

Michael Kunselman

Counsel for the California Independent
System Operator Corporation

**THIRTY-NINTH STATUS REPORT OF THE CALIFORNIA INDEPENDENT
SYSTEM OPERATOR CORPORATION ON
SETTLEMENT RE-RUN ACTIVITY**

The California Independent System Operator Corporation ("ISO") hereby provides its thirty-ninth status report pursuant to the Order Granting Clarification and Granting and Denying Rehearing of the Federal Energy Regulatory Commission ("Commission" or "FERC"), issued on February 3, 2004, in the above-captioned dockets ("February 3 Order").

New information can be found in Sections II(A) (Fuel Cost Allowance Data), II(C) (Cost-Based Recovery Filings), II(D) (Interest Calculations), and III (Estimated Schedule for Completion of the Refund Re-run Activity). Also new to this report is Section II(G) which addressed implementation issues related to the

Commission's October 19 order on remand of the Ninth Circuit's *BPA v. FERC* decision, 121 FERC ¶ 61,067 (2007) ("October 19 Order").

Any comments on this report that are received by December 1 will be considered for incorporation in next month's status report, scheduled to be filed on or about December 10.

The CAISO did not receive any comments on the last status report that it filed on September 6, 2007.

I. BACKGROUND ABOUT THESE STATUS REPORTS¹

In the February 3 Order,² the Commission directed the ISO³ "to submit to the Commission on a monthly basis, beginning on February 10, 2004, a report detailing the status of the preparatory adjustment re-runs and the dates that it expects to complete both the preparatory re-runs and the settlements and billing process for calculating refunds." February 3 Order at P 21. The first such status report was filed with the Commission on February 9, 2004. This filing is the thirty-ninth such report required by that Commission Order. While the preparatory and FERC refund re-runs are now complete, the ISO will continue to

¹ In its October 16, 2003 Order on Rehearing, 105 FERC ¶ 61,066 (2003), the Commission ordered the ISO to file within five months of the date of the order the results of the preparatory re-runs along with the appropriate explanations. The ISO considers that this directive has been overtaken by FERC's later recognition in the Amendment No. 51 proceeding that the ISO could not possibly comply with the deadline in the October 16 Rehearing order, as well as the deadlines in the previous Amendment 51 orders. The ISO is endeavoring to comply, however, with FERC's directive that the ISO work as fast as practicable, keep the parties well informed, and file monthly status reports. For this reason, in addition to the Amendment No. 51 docket, the ISO is also filing this report in the dockets associated with the California refund proceeding.

² 106 FERC 61,099 (2004). The context of the February 3 Order in prior versions of the ISO's status report.

³ Capitalized terms not otherwise defined herein shall have the meanings set forth in the Master Definitions Supplement, Appendix A to the ISO Tariff.

provide status reports throughout this process because the ISO believes that these reports have been a valuable tool for communicating with the Commission and Market Participants, in addition to meeting the Commission-mandated reporting requirement.

II. CURRENT STATUS OF RE-RUN ACTIVITY

The ISO has finished publishing settlement statements reflecting the refund rerun, and is still in the financial adjustment phase, in which the ISO is making adjustments to its refund rerun settlement data to account for fuel cost allowance offsets, emissions offsets, cost-based recovery offsets, and interest on amounts unpaid and refunds. As of the date of this report, the ISO has finished processing activities associated with the emissions cost and fuel cost offsets, is actively working to complete offsets relating to cost-based recovery filings, and has distributed several interest calculations as well.

For the Fuel Cost Allowance offset, the ISO circulated the latest round of fuel cost offset data to parties on July 16, with comments due on July 23. The ISO subsequently extended the comment period on this data until August 8, 2007. Comments on this data were received from Bonneville Power Administration ("BPA") and Pacific Gas and Electric ("PG&E"). As noted in the last status report, the ISO made two final discrete adjustments to the fuel cost allowance data based on the comments received from BPA and PG&E.

A. FUEL COST ALLOWANCE DATA

As explained in greater detail in previous status reports, the ISO has pursued a two-track approach with respect to calculating fuel cost allowances. First, the ISO calculated, for each entity that participated in the ISO's markets during the Refund Period (*i.e.*, October 2, 2000 through June 20, 2001), the percentage of the total fuel cost claim amounts to be allocated to these entities for each hour, consistent with the methodology approved by the Commission for doing so. Second, the ISO will use these validated numbers to calculate the final allocation percentages, as well as the final allocation of actual dollar amounts.

On December 22, 2005, the ISO distributed the first set of fuel cost allocation percentages to parties, and received comments from several parties. The ISO made several revisions to this data set and distributed the revised allocation percentages for another round of review on June 1, 2006. Since then, the ISO made various further modifications to the fuel cost percentages, most recently to adjust its calculations in order to allocate an additional \$7 million from the fuel cost claim of Los Angeles Department of Water and Power in the ISO markets. This modification was described in detail in the ISO's last status report. The ISO circulated the most recent fuel cost data on July 16, and accepted comments on this data through August 8.

In an effort to finalize the fuel cost allowance allocation calculations, the ISO made two additional adjustments, which it described in its last status report. First, in response to comments from PG&E, which pointed out that the fuel cost allowance may not result in claimants receiving more than their pre-mitigated

amount for each interval during the Refund Period in contravention of the Commission's directive in Paragraph 55 of its May 12, 2004 "Order Addressing Fuel Cost Allowance Issues," 107 FERC ¶ 61,166 (2004) ("May 12 Order"), the ISO ran an additional check on its fuel cost data to ensure that "the fuel cost allowance should not result in generators recovering more than the pre-mitigated amount." *Id.* The CAISO explained that this adjustment resulted in reducing the total Fuel Cost Allowance claims by approximately \$1.7 million.

Second, the ISO made a small adjustment to the fuel cost allocation data to reflect an issue raised by BPA concerning the allocation of fuel costs to energy exchange transactions. Specifically, the ISO undid the allocation of fuel costs to several energy exchange transactions, and re-allocate those costs to the remainder of the market during the relevant time periods. As the ISO explained in its last status report, the monetary impact of this adjustment is only \$38,856.35.

With these adjustments, the ISO finalized its fuel cost allocation calculations, and provided the data to the PX in order that the PX could complete its own fuel cost calculations. The ISO is also using the final fuel cost calculations as an input in the cost-offset calculations.

B. EMISSIONS OFFSETS

The ISO's work on the Emissions offset is completed and uploaded. By way of background, in the Findings of Fact in the Refund proceeding⁴ and again

⁴ Certification of Proposed Findings on California Refund Liability, Issued December 12, 2002, PP 729-760.

in the Commission's Order of March 26, 2003,⁵ the Commission found that 3 entities, Duke, Dynegy, and Williams, had supported their requested emissions allowance. Three other entities – Reliant, the City of Pasadena, and the Los Angeles Department of Water and Power ("LADWP") – were ordered to reallocate and recalculate their emissions allowances.⁶ Also, in the Commission's October 16, 2003 order, the Commission clarified that emissions offsets would be recoverable only for mitigated intervals.

On September 20, 2005, the Commission issued an order accepting the recalculated emissions claims of Pasadena and LADWP. 112 FERC ¶ 61,323 (2005). The Commission also acknowledged receipt of Reliant's informational filing detailing a pro rata allocation of its emissions costs offset among mitigated and non-mitigated intervals. *Id.* at P 40.

In earlier status reports, the ISO noted that it had received revised emissions claims for all outstanding entities. The ISO has incorporated these data into the financial adjustment phase.

On April 25, 2006, the ISO distributed data reflecting the allocation percentages for emissions for each party during the refund proceeding. The ISO provided a several week period for party comments on these data, and received none. On September 21, 2006, the ISO circulated the final approved emissions claim amounts that it will use in its calculations, as well as an explanation of the

⁵ 102 FERC ¶ 61,317 (2003) item BB.

⁶ With respect to Reliant, the Commission, in its March 26 Order, accepted the Presiding Judge's finding that although Reliant would be required to recalculate its emissions on a pro-rata basis, Reliant would be permitted to use the California Generators' existing pro rata allocation exhibit, and would not be required to re-file that information.

methodology for determining the resulting refund offsets. As explained in the market notice accompanying that distribution, the ISO intends to use these claim amounts, along with the percentages distributed on April 25, 2006, to determine the final refund offsets associated with approved emissions claims.

C. COST-BASED RECOVERY FILINGS

The ISO has received from various parties all of the cost-based filing data mandated by the Commission in its orders of January 26, 2006 and November 2, 2006. In the February 2007 status report, the ISO included a list of the claims that it intended to process.

As also noted above, the Commission issued an order approving an allocation methodology for cost filings on May 12, 2006. Therein, the Commission concluded that offsets from cost filings should be allocated to purchasers based on their net refunds. In its June 2006 status report, the ISO explained the methodology that it intends to adopt in order to implement the Commission's methodology. However, after considering questions posed by several parties, the ISO recognized that certain portions of its methodology discussion in the June 2006 status report should be clarified. Therefore, the ISO made several modifications to its methodology, which it set forth in its status report filed July 10, 2006 in these dockets (pages 10-12).

In its last several status reports, the ISO also noted that there is an important issue about how to account for refunds in both the ISO and PX markets when allocating the cost-based filing offsets. The ISO had discussions concerning this issue with several parties, and based on these conversations, the

ISO and PX agreed to a methodology for accounting for net refunds in both the ISO and PX markets, which the ISO set forth in its March status report. A full explanation of the methodology is included on the CDs that were circulated to parties on April 10.

The ISO issued updated cost filing allocation data on May 22, 2007. The primary adjustment in this distribution was to properly net the PX position to zero between the ISO and PX markets so that PX participants receiving refunds would be allocated the entire PX portion of the offset. Comments on this data were due to the ISO and PX jointly by June 12. The only comment received was from PG&E, which did not raise any new issues based on this most recent distribution.

In its last several status reports, the ISO noted that it would need to update its cost filing allocation calculations in order to account for modifications that it has recently made to its fuel cost allocation data, as well as changes in the PX's fuel cost allowance allocations resulting from these modifications. The ISO received the necessary data from the PX on November 12. In addition, it appears that the first round of cost filing data did not include a portion of the cost filing claim approved for Edison Mission Marketing and Trading. The ISO is in the process of updating the cost filing calculations to reflect these issues, and plans to complete this process and make the calculations available to parties by November 30. The ISO will accept comments from parties on this data through December 14.

D. INTEREST CALCULATIONS

As noted in previous reports, the ISO has made several distributions of interest data to parties. First, on January 12, 2006, the ISO distributed to parties via the listserv a spreadsheet showing the reversal of all interest amounts originally charged to entities that transacted with the ISO during the Refund Period, along with an explanatory memorandum.

The calculation of interest on unpaid invoices during the Refund Period, pursuant to the methodology approved by the Commission was made available on May 1, 2006. The ISO also posted to listserv on that date a memorandum explaining these calculations. In response to comments from the parties, the ISO revised these calculations and, on September 29, 2006, the ISO released new calculations and announced that it was seeking comments no later than October 27. Based on comments received during that review period, the ISO released an updated calculation of interest on unpaid invoices on February 27. The comment period closed on March 15.

Once the other outstanding financial adjustment activities (*i.e.* fuel cost and cost filing allocations) have been completed, the ISO will begin calculating interest on refunds, which is the last interest calculation that the ISO will do as part of the financial adjustment phase. The ISO estimates that this will take two weeks, at which time the ISO will make this data available to parties, and provide a two week period to review and comment on the calculations. The ISO will also need to perform adjustments to balances in the ISO market to account for any allocation that the ISO receives as a result of a shortfall in the PX markets

between interest earned in the PX Settlement Trust Account and the Commission's rate.⁷ However, as explained in its last status report, the ISO plans to wait to make these adjustments until after it completes the financial adjustment phase and begins accounting for the impacts of the settlements entered into in this proceeding. The ISO proposes to proceed in this manner because even if it calculates these adjustments during the financial adjustment phase, they will almost certainly have to be re-done when it accounts for settlements in this proceeding.

In the March 2007 status report, the ISO announced its intention to assess interest on preparatory rerun adjustments relating to transactions with trading dates during the Refund Period. The ISO will determine the date on which interest begins to run by using the trade date on which the original transaction took place. For example, if a particular preparatory rerun adjustment was made for a transaction that originally took place on March 12, 2001, then the ISO would begin to calculate interest as of that date. This corresponds to the ISO's methodology for calculating interest on refunds, and is consistent with the Commission's directive that interest should be computed from the "date of collection."⁸

The ISO made calculations of this component of interest available through a listserv announcement on March 29, 2007. Comments were due April 19, 2007. A number of parties commented on these calculations, some disputing the

⁷ In its November 23, 2004 "Order on Rehearing" issued in this proceeding, the Commission accepted the ISO's request to allocate any portion of such shortfall assigned to the ISO pro rata to its participants. 109 FERC ¶ 61,218 at P 39 (2004).

⁸ *San Diego Gas & Electric Co., et al*, 105 FERC ¶ 61,066 at P 107 (2003).

ISO's proposal, others supporting it. The ISO responded to all of these comments in a filing made with the Commission on May 1, 2007.

E. STATUS OF ADR CLAIMS

As noted in previous reports, a number of claims that relate to the Refund period are being pursued by various Market Participants in Alternative Dispute Resolution ("ADR") pursuant to Section 13 of the ISO Tariff. Before the distribution of principal contemplated by Paragraph 59 of the October 19 Order, the ISO will need to implement settlement adjustments reflecting the final resolution of any pending ADR claims. In the February 2007 status report, the ISO provided an update on the status of these matters, most of which are also posted on the ISO website at <http://www.caiso.com/clientserv/adr/>.

The ISO continues to suspend conference calls with Market Participants on the status of re-run activity until any issues surface that suggest the need for additional calls. The ISO will likely schedule another conference call after it distributes the data from the financial adjustment phase, in order to field questions from Market Participants on that data. The ISO will inform Market Participants when it schedules that call.

F. DECEMBER 1 DISPUTES

On December 1, 2005, pursuant to the Commission's August 8, 2005 order on cost-based recovery issues,⁹ several entities filed with the Commission pleadings raising actual, or potential, disputes with respect to reruns and offsets. In the August 23 Order, the Commission acted on these disputes, rejecting the majority of them. With respect to the dispute filed by Puget Sound concerning

⁹ 112 FERC ¶ 61,176 (2005) at P 116.

ISO settlement data, the Commission required the ISO and Puget to attempt to resolve the issues raised by Puget, and to file periodic status reports concerning these efforts. The ISO and Puget filed three status reports, and ultimately, on October 16, 2006, their final positions on the single issue that could not be resolved.

G. BPA REMAND IMPLEMENTATION

The Commission's order of October 19 requires the ISO to "complete the[] refund calculations including all entities that participated in the ISO/PX markets." October 19 Order at P 38. The Commission agreed that it would be "time intensive and unreasonable to recalculate all of the refund calculations in order to remove the non-public utility entities." *Id.* The Commission's earlier orders were vacated, however, "to the extent that they order non-public utilities to pay refunds." *Id.* at P 36. This will eventually require the ISO to issue credits back to certain non-public utilities, and allocate the resulting shortfall of refunds to other parties. The Commission directed that this will be done through "a simplified financial clearing." The ISO's plans to make these adjustments is as follows:

After refunds and offsets are finally calculated, but before it makes adjustments to account for the approved global settlements, the ISO will issue a credit to each party that the Commission has determined to be a non-public utility. *See id.* at P 57. The credit will equal the amount of the refunds "that otherwise would have been paid" by that party. *Id.* at P 39. This shortfall of refunds will be allocated to parties whose "final net refund position"¹⁰ is positive –

¹⁰ The ISO acknowledges that the result of this reading will be that the words "net refunds" will have a slightly different meaning for purposes of the October 19 Order in reference to

i.e., the net refunds and offsets totaled between the ISO and PX markets results in a payment to the party. See *id.* at P 39 (suggesting that “refund recipients [should] share the burden of the shortfall in proportion to their exposure in the CAISO and PX spot markets”). This allocation will reduce the final net refund. *Id.*

The ISO has received inquiries from parties about whether the ISO could calculate the amount of the credit to a non-public utility based on the components of the refunds that would have been paid, rather than the refunds themselves. For example, a couple of parties have asked whether the ISO can calculate the portion of a party’s refunds payable that are derived only from the sales or energy supplied by the party, before those sales are netted against energy purchased. The ISO does not believe that calculating the credit on this basis would be consistent with the October 19 Order, for several reasons. First, it would be inconsistent with the focus of the Order (and the *BPA* decision) on not requiring non-public utilities to “pay” refunds. *E.g.*, *Bonneville Power Admin. v. FERC*, 422 F.3d 908, 919 (9th Cir. 2005). Second, it would require a great deal of work simply to calculate refunds on the basis of sales only, exclusive of purchases. This is precisely the kind of “time intensive” approach that the Commission rejected, in favor of the “simple and expedient” approach adopted in the October 19 Order. See 121 FERC 61,067 at PP 38-39. Third, it is consistent

“implement[ing the] simplified financial clearing,” October 19 Order at P 39, than they do for purposes of the Commission’s Order of May 12, 2006 in reference to “allocat[ing] the cost offset to those buyers who are compensated by the MMCP refund methodology through receiving refunds.” 115 FERC ¶ 61,171, ¶ 28. In the context of this order, the words “net refunds” encompass offsets, where they do not in the context of the latter order. The ISO believes that this difference reflects the fact that “net refunds” is not a term of art that has the same meaning regardless of context, but merely a description of the different calculations and goals in the two orders.

with the Commission's approach to allocating the interest shortfall, which the October 19 Order cited as a precedent. See 110 FERC ¶ 61,336 at P 41 ("a pooled allocation based on final net interest position . . .").

Fourth, breaking down refunds into subcomponents could result in an imbalance in the PX market (and a resulting payment shortfall to all parties) that obviously is not contemplated by the October 19 Order. Specifically, if the Order were interpreted to address refund accounting entries at the transaction level, certain PX transactions in the ISO markets would be treated differently than the corresponding transactions would be treated within the PX markets. The PX could be required to credit back amounts to non-public utility suppliers for transactions in which the PX acted as their Scheduling Coordinator in the ISO real-time market. In the ISO markets, however, these sales were made by the PX, which is a regulated public utility. The sales are therefore fully mitigated, and thus, the PX would be crediting back these accounting entries but receiving no corresponding credit from the ISO. This problematic result is avoided by maintaining a focus on net refunds to be paid through the simplified financial clearing, which is additional confirmation that the ISO's proposal is the appropriate reading of the Commission's order.

III. ESTIMATED SCHEDULE FOR COMPLETION OF THE REFUND RE-RUN ACTIVITY

Attachment A to this status report contains the ISO's estimate of the time that will be required to complete the financial adjustment phase. This schedule could be extended if errors are discovered during the review periods for the ISO's

calculations. It may also change as the result of any number of legal challenges to Commission orders. In previous status reports, the ISO noted, in particular, the decisions by the Ninth Circuit Court of Appeals in *BPA v. FERC* concerning the refund liability of non-FERC jurisdictional entities, and *CPUC v. FERC* concerning certain “scope/transactions” issues. With respect to the *BPA v. FERC* decision, the Commission’s October 19 Order makes clear that the ISO should continue to process its refund calculations for all parties that participated in its markets during the Refund Period. At some point after the Commission issues an order on which parties constitute “non public utility entities” the ISO will need to allocate to net refund recipients those amounts that would have been collected from non-jurisdictional entities absent *BPA*. The ISO will provide more specific information to parties and the Commission as to the timing of this calculation in an upcoming status report. Also, in its December status report, the ISO will provide more detailed information concerning a proposed post-interest adjustment schedule.

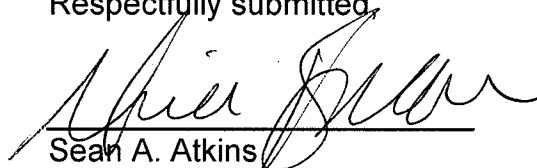

Attachment B to this status report contains a list of the major ISO refund calculation distributions and the associated review and comment periods provided to parties by the ISO to date. In some cases, the ISO did not provide any specific closing date for comments, but rather, continued to solicit and consider comments and make appropriate corrections until the data were utilized to make further calculations.

IV. CONCLUSION

The ISO respectfully requests that the Commission accept the ISO's thirty-ninth refund status report in compliance with the Commission's February 3 Order, referenced above.
