WEIM Resource Sufficiency Evaluation Enhancements Phase 2 Track 1

- Structured & Unstructured Market Simulation
 - **Structured scenario TD 5/2: executed, settlements published**
 - **Structured scenario TD 5/4: environment issues in AM, executed for PM, settlements published**
 - **Structured scenario TD 5/9: executed, settlements published**
 - **ISO BAA Opt In for AET TDs 5/2 & 5/4, ISO BAA Opt-Out for AET TD 5/9**
 - **ISO continues to support testing; please contact us for any requests**
- All code changes in MAPSTAGE as of 4/17 & 4/18
- Settlements changes in MAPSTAGE as of 4/28, effective 5/1
- [BRS](#)
- [Market Simulation Scenarios](#)
- Training course held 4/26
 - [Presentation Updated 5/17, please review for any Market Simulation testing impacts](#)
 - Video available on the [Learning Center](#)

Energy Storage Enhancements Track 1

- Unstructured Market Simulation
- SIBR changes in MAPSTAGE as of 4/17
- Market changes in MAPSTAGE as of 4/27
- No Settlements impacts
- [BRS](#)
- Training course held on 5/2
 - [Presentation](#)
 - Video available on the [Learning Center](#)
- MAPSTAGE is configured to not use telemetry values. This way, the initial conditions for SOC are directly inherited from the solution of the previous optimization.
- **SIBR/Market Known Issues fixed 5/22**
- **Market Known Issue fixed 6/6**
- **ESE refresher Training on 6/22**

Energy Storage Enhancements Track 1

The ISO has confirmed the ESET1 Attenuation Factors for Production below. These will be published in an upcoming PRR for the MO BPM and on www.caiso.com.

These AS multipliers are different from the ones in the [October 31, 2022 presentation](#) and from what has been in the MAP Stage Market Simulation environment.

The MAP Stage Market Simulation environment Attenuation Factors have been modified to reflect the final values below that will be used for Production. MAP Stage Market Simulation has these final values effective as of:

DA for TD June 10, 2023

RT for:

STU/RTPD June 9, 2023 10:45 binding interval

RTD June 9, 2023 10:00 binding interval

Hour	Reg Up (mRU)	Reg Down (mRD)
1	11%	32%
2	4%	39%
3	4%	36%
4	2%	38%
5	3%	35%
6	4%	33%
7	7%	30%
8	4%	47%
9	4%	51%

22	8%	41%
23	8%	40%
24	3%	43%

Energy Storage Enhancements Track 1

Area	Summary	Details	Status
Market	Regulation Not Clearing DAM	IFM not considering the negative portion of the operational range when awarding Reg Dn	<p>Discussion</p> <p>Presented @ 6/8 Market Simulation Forum</p> <p>To be included in 6/22 refresher training</p>
Market	Negative Regulation ASMPs	Observing negative ancillary service marginal prices in market simulation	Presentation @ 6/15 Market Simulation Forum
Market	Constraints on regulation awards in BRS	LES RU award is incorrect issue with coverage factor equation	Fix in MAPSTAGE 6/6
SIBR	<p>Rules Modifications</p> <p>Rules: 32527 32528 32530 32531</p> <p>New: 32543 32544 32545 32546</p>	<p>For Production if there is a Regulation award there should be a GSS or LSS self-schedule based on existing rules.</p> <p>We have a software variance for ESE implementation because there will be no way to submit a GSS/LSS if you have a DA Award.</p>	<p>COMPLETE</p> <p>Fixes in MAPSTAGE 5/22</p>

Ancillary Service State of Charge Constraint

- Unstructured Market Simulation
- CMRI deployed to MAPSTAGE 4/26, **data available 5/9 for TDs 5/2 forward**
- Market code in MAPSTAGE as of 4/27
- Settlements changes in MAPSTAGE as of 4/28 effective 5/1
- [BRS](#)
- Training course held on 5/1
 - [Presentation](#)
 - Video available on the [Learning Center](#)
- **ASSOCC Settlements fix applied 5/30 effective initial TD 5/30 forward and recalcs TD 5/23 forward**
- **See ESE known issues slide as those may impact ASSOCC as well – SIBR/Market Known Issues fixed 5/22; Market Known Issue fixed 6/6**

Ancillary Service State of Charge Constraint

Known Issue

Summary	Details	Status
Use of ASSOCC during non-AS Intervals	Clarify validity of the flag in unwarded intervals with no direct charging or discharging necessary in order for unit to meet its AS obligations later in the day, and the presence of the flag and potential unintended impacts on BCR in what should have been economic intervals.	Settlements fix will be available on the new config file for initials for TD 5/30 forward And for Recalcs for TD 5/23 forward

Hybrid Resources Phase 2C – Settlements

- Unstructured Market Simulation
- Settlements code in MAPSTAGE as of 4/28 (effective TD 5/1) for this to be available for Settlements TDs 5/2 and onward for Tuesday/Thursdays thru May
- [BRS](#)
- CIDI knowledge article available 5/26/23: KAS-23-430 Participating in the ISO Market as a Hybrid Tie-Gen Resource

URL Changes (Application Delivery Resiliency)

Plan

- MAP-Stage new API URLs **available as of May 18, 2023** for 60 days to transition
- Please open the entire 45.42.16.0/21 network on ports 80 & 443 for our new IP space to access new API URLs

2023 – Application Delivery Resiliency

Remaining API Cutovers

- BAAOP
- BSAP
- CIRA
- CMRI
- DRRS
- EIDE
- ALFS
- MF
- PISOA
- RCBSAP
- RCSERVICES (RCEIDE)
- SIBR
- STLMT
- OMS

Plan

- MAP-Stage and Production will have soft cutovers to have current and new API URLs available in parallel for a window of time of 60 days in each environment
- Current API URLs remain available while new API URLs are introduced as they become verified and ready for customer use
- [MAP-Stage new API URLs available as of May 18, 2023](#)
- Production target later in 2023, schedule to be provided after MAP-Stage activities
- Please open the entire 45.42.16.0/21 network on ports 80 & 443 for our new IP space to access new API URLs

Flexible Ramping Product Refinements

- Nomogram constraints are now active in MAPSTAGE and available for unstructured testing
- Production activation for the FRP nomogram constraints will be rescheduled from 6/15

E-Tagging Procedure Update: Day-Ahead RUC Automated Adjustments

Attention: Scheduling Coordinators

Don't miss your opportunity to test the automated adjustment process in MAP Stage. The last date to test in the Market Simulation environment is Friday, June 9, 2023.

Initial notification sent on May 30, 2023:

Beginning on **June 14, 2023, the ISO will be updating its e-tagging procedures** in the Production Environment to ensure that the energy profile on day-ahead e-tags reflects each resource's day-ahead award. After the day-ahead market results are published the ISO will compare the MW in the energy profile on the e-tag against the DA RUC award quantity. If the amount on the e-tag exceeds the DA RUC award, the amount on the e-tag will be adjusted to equal the DA RUC award.

For example, an SC submits an export bid of 150 MW and an e-tag with 200 MW in the energy profile, the e-tag will automatically be adjusted down to 150 MW (assuming that this is the RUC award).

Key Points

- Adjustments will be made both on import and export transactions
- This adjustment is not applicable to resources associated with a Contract Reference Number (CRN), for example Existing Transmission Contracts (ETC)
- This is only applicable when the e-tag amount exceeds the DA RUC award; e-tag adjustments in the upward direction will not be considered.

E-Tagging Procedure Update: Day-Ahead RUC Automated Adjustments

Market Simulation

In support of this change, the MAP Stage Market Simulation environment is currently available for Scheduling Coordinators to test the automated adjustment process, **through June 9, 2023**. We recommend that Scheduling Coordinators take the following steps to test in MAP Stage:

- Submit a CIDI case with 'Functional Environment' of "Market Simulation" to Register resources to participate in this market simulation if they are not already registered in the Map Stage Environment. There is a five business day turnaround time for new participant configuration in the MAP Stage market simulation tagging environment.
- Submit an energy bid or self-schedule in the day-ahead market for an import/export resource.
- Before 14:00, enter an e-tag with an energy profile that exceeds the DA RUC award. The DA RUC award quantity is available in the Day-Ahead Residual Commitment Capacity report found in the Day-Ahead drop down menu in CMRI
- Use the following URL to submit the e-tag in MAP Stage: <https://demo.caiso.tag.oati.com/oati/ets-login.wml>
- E-Tag adjustments will automatically occur at 15:30, 18:30 and 20:30 (PST).
- Review the e-tag to make sure that the expected adjustment occurred.
- WEIM BAAs should review tags that touch or sync in their BA to validate the adjustment to energy profile of the e-tags
- Submit problems or concerns via CIDI ticket with the subject line "DA RUC Adjustment" and functional environment of "Market Simulation".

For background information on this change refer to the following resources:

- Market Operations Business Practice Manual (BPM) section 6.3.2 – Interchange Transactions and E-Tagging
- Presentation – <http://www.caiso.com/Documents/Presentation-Summer-2021-Readiness-Training-Part-3-Jun-24-2021.pdf>
- Video - <https://youtu.be/bsVcadkTJ1I>
- Readiness Note - [California ISO - Learning center \(caiso.com\)](#)

Next Steps

- Next Market Simulation Forum on Thursday, June 15, 2023 at 1400 PT
- Please invite team interested in the ESE negative prices technical discussion to join for the ISO team's presentation

WEIM Resource Sufficiency Evaluation Enhancements

Phase 2 Track 1: Scenario 1

Scenario Number	Structured Scenario	
1	Description	Facilitate simulation of assistance energy transfer opt-In functionality.
	ISO Actions	Facilitate failure of upward capacity test and/or flexible ramping test for WEIMs signed up for market sim.
	WEIM Market Participant Actions	1) WEIM market participants should opt-in for the assistance energy transfer functionality via CIDI. CIDIs submitted less than 5BD before TD aren't guaranteed, but ISO will try to accommodate. 2) Facilitate conditions to fail upward capacity test and/or flexible ramping test. 3) Submit ETSR Limits
	ISO Market Participant Actions	N/A
	Expected Outcome	When opted in, allow that BAA to receive WEIM assistance energy transfer by not enforcing the BAA Import transfer limit in the base scenario. Verify the RSE failure capacities and RTM bid cap in CMRI and OASIS.
	Anticipated Settlement Outcome	Verify assistance energy transfer charges and revenue allocation
	Expected Settlement Outcome	BPM CG CC 6476 Real Time Assistance Energy Transfer Surcharge_5.0 BPM CG CC 6479 Real Time Assistance Energy Transfer Allocation_5.0

WEIM Resource Sufficiency Evaluation Enhancements

Phase 2 Track 1: Scenario 1 Reminders

- The environment is available for entities to try to cause failures of the tests and increase their own BAA load forecast to create the import situation.
- Reminder: Submit ETSR limits.
- **Please submit CIDs to disable auto-balancing and/or bid insertion/canned bids for desired TDs**
- Review OASIS flex and bid test results for hours with failures
- ISO BAA Opt In for AET TDs 5/2 & 5/4, ISO BAA Opt-Out for AET TD 5/9 onwards
- **BPM CG CC 6476 Real Time Assistance Energy Transfer Surcharge_5.0 (Fee)**
 - Must be opted in to AET to receive assistance
 - If desired to facilitate failures, open CIDI for CAISO to disable your auto-balancing and or bid insertion/canned bids
 - Must fail RSE up test
 - Must be net importing in RT
 - BAA's net imports must be higher than their Reg up
- **BPM CG CC 6479 Real Time Assistance Energy Transfer Allocation_5.0 (Revenue)**
 - Does not need to be opted in to AET, can be opted in or opted out
 - Must pass RSE up test
 - Must be net exporting in RT
 - The allocation/revenue will be spread across all other BAAs that passed RSE and are net exporters in RT
- Because the conditions in surcharge and revenue are direct opposites, a BAA can only either receive revenue or get charged a penalty in each interval.
- When validating a few intervals and only seeing one charge code, remember that if you are in one charge code for one interval, it is impossible for you to be on the other charge code for that same interval.
- If you are opted out of AET, you can still receive revenue as long as you pass RSE Up and you are net exporting in RT; opt in election is only for the energy assistance.

WEIM Resource Sufficiency Evaluation Enhancements

Phase 2 Track 1: Scenario 1

- Visibility of AET designation
 - BAAOP UI will show that flag for BAA operators; WEIM BAAs able to view “Assistance” column in BAAOP
 - In Settlements, the flag is reportable in the Settlements statement file
- **PRR 1500 updated 5/16/23 in Ver 3: The Assistance Energy Transfer report described as an OASIS report in this PRR has been removed. Assistance Energy Transfer status will be available and visible to all WEIM's if they opt-in or not via BAAOP, not OASIS. Opt-in Status is also visible on ones Settlement statement file. CAISO will send out a notice when CAISO opts-in for AET.**

WEIM Resource Sufficiency Evaluation Enhancements

Phase 2 Track 1: Scenario 2

Scenario Number	Unstructured Scenario	
2	Description	Facilitate submission of G-FP Export e-Tagging.
	ISO Actions	N/A
	EIM Market Participant Actions	Market Participants should e-tag several export resources as “Firm Provisional Energy (G-FP)”.
	ISO Market Participant Actions	Market Participants should e-tag several export resources as “Firm Provisional Energy (G-FP)”.
	Expected Outcome	Market Participants verify G-FP e-tags in their own Web Smart Tag system. CAISO will verify ITS for G-FP e-tags. Please provide list of tag codes or market awards for CAISO verification.
	Anticipated Settlement Outcome	N/A
	Expected Settlement Outcome	N/A

- The required tagging as G-FP or G-F applies to tagging on intertie resources with the ISO (could be market participants and/or WEIM entities) for tags that involve the ISO BA.
- There are no ITS/tagging system changes for RSEE2 Track 1 Summer 2023 Release
 - Tags can be submitted even now with G-FP or G-F
- RSEE2 Track 2 Fall 2023 Release will have ITS/tagging changes to enforce/require the G-FP or G-F in the applicable tags

Market Simulation Activities

Initiative	Market Simulation	Comments
RSEE2T1	Structured & Unstructured	Leverage settlements TDs
ESET1	Unstructured	No settlements impacts
HR2C	Unstructured	Leverage settlements TDs
ASSOCC	Unstructured	ISO will monitor and intervene as necessary
URL Changes (ADR)	Connectivity/Unstructured	No settlements impacts
FRP Nomograms	Unstructured	No settlements impacts

Ancillary Service State of Charge Constraint

ID#	Guidance on Market Participant Impacts	Source System	Sink System	Reason for Potential Scenario
ASSOC-MSIM001	<p>Storage resource SCs shall submit energy bids and competitive regulation bids (to receive regulation awards) to trigger AS SOC constraint to be binding in RTPD, RTD</p> <p>Potential scenarios include: Energy bids to bid cap</p> <p>Both regulation up and regulation down bids</p>	SIBR	<p>RTM</p> <p>Settlements</p> <p>CMRI</p>	Confirm AS SOC constraint binds

- Due to environment constraints, will not be able to simulate retroactive trade dates from Production or otherwise in MAPSTAGE
- MAPSTAGE is configured to not use telemetry values. This way, the initial conditions for SOC are directly inherited from the solution of the previous optimization.
- ISO is providing guidance to cause ASSOC constraints to bind for market simulation
- The bidding strategies are designed so that they should essentially work in the vast majority of situations but ISO will still monitor the market simulation to make sure the market yields the desired outcomes.

Suggested scenario in DA –Modify storage resource bid so its “lower” AS SOC constraint becomes binding

- HE01 to HE08
 - Submit energy (EN) bids covering the positive EN range (0 to Pmax) at a bid price of $-\$150/\text{MWh}$ (No bid on EN negative range)
 - No Ancillary Service (AS) bid
 - Reason: Depletes the SOC
- HE09 to HE24
 - Submit EN bids from Pmin/2 to 0 with a bid price of $+\$1000/\text{MWh}$ (No bid on EN positive range)
 - Bid Reg Up for $-P_{\text{min}}$ MW at $\$0/\text{MW}$.
 - Reason: Help the resource get awarded Reg Up in DA

Suggested scenario in RT –Modify storage resource bid so its “lower” AS SOC constraint becomes binding

- HE01 to HE08
 - Submit energy (EN) bids covering the positive EN range (0 to Pmax) at a bid price of $-\$150/\text{MWh}$ (No bid on EN negative range)
 - No Ancillary Service (AS) bid
 - Reason: Depletes the SOC
- HE09 to HE24
 - Submit EN bids from Pmin/2 to Pmax with a bid price of $-\$150/\text{MWh}$
 - Bid Reg Up for maximum possible amount at $\$0/\text{MW}$.
 - Reason: Enables the lower AS SOC constraint to bind

Suggested scenario in DA – Modify storage resource bid so its “upper” AS SOC constraint becomes binding

- HE01 to HE08
 - Submit EN bids covering the negative EN range (P_{min} to 0) at a bid price of +\$1,000/MWh. (No bid on EN positive range)
 - No AS bid
 - Reason: Charges the SOC
- HE09 to HE24
 - Submit EN bids from 0 to $P_{max}/2$ with a bid price of – \$150/MWh (No bid on EN negative range)
 - Bid Reg Down for P_{max} MW at \$0/MW
 - Reason: Helps the resource get awarded Reg Down in DA

Suggested scenario in RT – Modify storage resource bid so its “upper” AS SOC constraint becomes binding

- HE01 to HE08
 - Submit EN bids covering the negative EN range (P_{min} to 0) at a bid price of +\$1,000/MWh. (No bid on EN positive range)
 - No AS bid
 - Reason: Charges the SOC
- HE09 to HE24
 - Submit EN bids from P_{min} to $P_{max}/2$ with a bid price of +\$300/MWh
 - Bid Reg Down for maximum possible amount at \$0/MW
 - Reason: Enables the upper AS SOC constraint to bind

Production Activation

- Customer feedback on timeline received and heard by ISO
- Entire Summer Release moves to 7/1/23 – RSEE2T1, ESET1, ASSOCC, HR2C Settlements
- Deployments to Production by 6/1/23
- [Notices](#) sent 5/19/23

Summer 2023 Release activation rescheduled from 6/1/23 to 7/1/23

MESSAGE

The California ISO has moved the Summer 2023 activations for Resource Sufficiency Enhancements Phase 2 Track 1, Energy Storage Enhancements Track 1, Hybrid Resources Phase 2C - Settlements, and Ancillary Services State of Charge Constraint projects to July 1, 2023.

Due to the short development cycle for this Summer Release compared to the typical Fall Release where customers have more buffer time to make final adjustments to their systems based on final findings from market simulation, many ISO customers indicated the need for this buffer time towards the end of market simulation and the activation date of the Summer Release. The ISO understands the importance of giving our market participants this buffer time and decided to reschedule the activation date of Summer Release to July 1, 2023 due to the constraint that this release needs to be activated at the beginning of a month. The new activation date will allow market participants to finish validation of software changes, market rules, settlements statements, and make any final adjustments accordingly.

The release and project information is available in the Release User Group presentation [here](#) and on the Release Planning page [here](#).

- Resource Sufficiency Enhancements Phase 2 Track 1 Impacted Systems: Master File, SIBR, Market, CMRI, OASIS, and Settlements
- Energy Storage Enhancements Track 1 Impacted Systems: SIBR and Market
- Hybrid Resources Phase 2C - Settlements Impacted Systems: Settlements
- Ancillary Services State of Charge Constraint Impacted Systems: Market, CMRI, and Settlements

The Summer 2023 Release functionality for Resource Sufficiency Enhancements Phase 2 Track 1, Energy Storage Enhancements Track 1, Hybrid Resources Phase 2C - Settlements, and Ancillary Services State of Charge Constraint will remain active in the current market simulation MAP Stage environment so that customers can continue to test and prepare for a July 1, 2023 activation. Customers are encouraged to contact release@caiso.com for any questions or necessary support regarding impacts of this schedule change.

Energy Storage Enhancements Track 1

- **Attenuation Factors**

- For Market Simulation, we will use the factors in the policy:
 - <http://www.caiso.com/InitiativeDocuments/Presentation-EnergyStorageEnhancements-10-31-2022.pdf>
- These will be further tuned upon ISO study

Market Simulation values set:

Reg Up	Reg Down

Agenda

- Ancillary Service Awards Clarification – Provide clarity on the implementation details of the A/S awards for storage resources
- Provide examples/scenarios
- Q&A

Ancillary Service Award Clarification for Energy Storage - A/S award constraints

- AS awards require 50% of available capacity (DA/RT) and dispatchable energy bid range (RT) in the opposite direction
- The first constraint: $0.5 (RU_{i,t} + SR_{i,t} + NR_{i,t}) \leq -LCL_{i,t} - RD_{i,t}$
ensures that a fraction of regulation up (and spin and non-spin awards) do not exceed charging capacity that may be awarded energy bids and ensures that storage resources have capacity to allow bids in the opposite direction of positive ancillary service awards
- The second constraint: $0.5 RD_{i,t} \leq UCL_{i,t} - RU_{i,t} - SR_{i,t} - NR_{i,t}$
ensures that a fraction of regulation down does not exceed discharge capacity and ensures that storage resources have capacity to allow bids in the opposite direction of negative ancillary service bids
- Together the equations ensure that storage resources are dispatched in a reliable manner

Ancillary Service Award Clarification for Energy Storage - A/S award constraints (Real Time)

- Constraint in the Real Time Market ensures deliverability of awards are feasible

$$0.5 (RU_{i,t} + SR_{i,t} + NR_{i,t}) \leq \max(0, -LEL_{i,t})$$

$$0.5 RD_{i,t} \leq \max(0, UEL_{i,t})$$

- Day Ahead Market reserves unencumbered capacity for RT energy bid

Rationale

- The energy bid in the opposite direction allows the market to optimally replenish the SOC to sustain the AS award
- The capacity limit avoids a forced (potentially uneconomic) dispatch in the opposite direction that would undermine the sustainability of the AS award
- The neutral energy schedule of 0MW must always be feasible
- Resources may not receive ancillary service awards that could result in infeasible dispatch
 - For example: If a storage resource is fully charged, an award for charging energy paired with an award for ancillary services beyond discharge capability would be infeasible

Example: $\pm 12\text{MW}/48\text{MWh}$ ESR

- Feasible AS award combinations with a full energy bid range of $[-12, 12]\text{MW}$

RU + SR + NR (MW)	RD (MW)
12	0
11	2
10	4
9	6
8	8
6	9
4	10
2	11
0	12

AS awards are limited by the capacity limit in each direction

For the $\pm 12\text{MW}/48\text{MWh}$ ESR

- ◆ Why is the combination (16MW RU, 0MW RD) not allowed when there is 8MW of available charging capacity with a charging energy bid?
- ◆ Because it forces a -4MW energy schedule
- ◆ If the initial SOC in DAM was at 50% (24MWh), the award can span 6 hours before reaching full charge
- ◆ If the initial SOC in RTM is at 75% (32MWh), the award cannot be sustained after 3 hours

Ex 1: (Feasible Award) A 100 MW award for regulation up must allow for 50 MW of charging capacity

Ex 2: (Feasible Award) Awards for 66 MW of regulation up and down must be accompanied by 33 MW of capacity in both directions

AS Awards

Capacity for Eng Bids

Ex 3: (Infeasible Award) Awards for 133 MW of regulation up must be accompanied by energy awards for -33 MW or less, which could be infeasible in RT

AS Awards

Capacity for Eng Bids

Example: A resource with an infeasible energy award in real-time dictated by day-ahead a regulation award

- Assume this resource has an award in hour ending 1 for 133 MW of regulation up (from the day-ahead market) and receives consecutive -33 MW awards for energy in real-time
 - As noted, the market will ensure that the resource starts the hour with 50 MWh of energy (Assume resource begins the hour with 380 MWh state of charge)
- Now make the extreme assumption that none of the regulation is converted to energy
 - Before interval 11 the resource will be fully charged at 400 MWh
 - Once at full state of charge, this resource will no longer be able to follow energy dispatch awards, and will not be able to follow any automatic generator control (AGC) instructions from the ISO between the range of 0 and -33 MW, a requirement for the ancillary service award

Real-time energy awards necessitated by day-ahead ancillary service awards can lead to inability to perform

- Proving that a storage resource could receive an infeasible dispatch
- Storage resources are required to hold state of charge in real-time to provide an ancillary service
 - State of Charge must exceed 30 minutes * regulation up award

Example Resource

- +/- 100 MW resource
- 4-hour battery: 0-400 MWh of state of charge
- 100% round trip efficiencies

Q&A
