

**UNITED STATES OF AMERICA  
BEFORE THE  
FEDERAL ENERGY REGULATORY COMMISSION**

Independent Energy Producers Association,	)	
Complainant	)	
v.	)	Docket No. EL05-146-000
California Independent System Operator Corporation,	)	
Respondent	)	

**REPLY COMMENTS AND ANSWER TO MOTION TO DISMISS  
OF THE  
CALIFORNIA INDEPENDENT SYSTEM OPERATOR CORPORATION**

Pursuant to the Commission’s Order on Complaint and Offer of Settlement of July 20, 2006, 116 FERC ¶ 61,069 (“July 20 Order”), the California Independent System Operator Corporation (“CAISO”) files its Reply Comments regarding the Offer of Settlement filed in the above-identified docket.<sup>1</sup>

**I. INTRODUCTION**

On March 31, 2006, the Independent Energy Producers Association (“IEP”), the CAISO, the California Public Utilities Commission (“CPUC”), Pacific Gas and Electric Company (“PG&E”), San Diego Gas & Electric Company, and Southern California Edison Company (together, “Settling Parties”) filed an Offer of Settlement in this proceeding. In its July 20 Order, the Commission established a paper hearing “to review evidence on whether the rates and cost allocation mechanism under the Offer of Settlement and some other rates and

---

<sup>1</sup> Capitalized terms not otherwise defined herein have the meanings set forth in the Master Definitions Supplement, Appendix A to the ISO Tariff, and in the Offer of Settlement.

cost allocation are just and reasonable.” July 20 Order, Ordering Paragraph (B).

The Commission directed the Settling Parties to file a response addressing three issues:

1. Fully support the cost basis, relevance and appropriateness of each assumed component used to determine the proxy capacity price, and the [Reliability Capacity Services Tariff (“RCST”)] capacity payment (e.g., the target capacity price of \$73/kW-year, the target availability factor of 95 percent, the assumed heat rate of 10,500 BTU/kWh).
2. Fully explain and document how the following provisions of the Offer of Settlement are necessary to ensure just and reasonable compensation to generators under the must-offer obligation: (1) automatic mitigation procedures, (2) frequently mitigated bid adders and (3) evaluation of ancillary service bids.
3. Fully explain and document the reasonableness of the proposed cost allocation mechanisms.

*Id.* at Appendix. The Settling Parties filed their response on August 21, 2006 (“August 21 Response”).

On September 11, 2006, Initial Comments were filed by the Cities of Anaheim, Azusa, Banning, Colton, Pasadena, and Riverside, California (“Six Cities”); the California Department of Water Resources – State Water Project (“SWP”); the California Electric Oversight Board (“CEOB”); the California Municipal Utilities Association (“CMUA”); the City of Santa Clara, California, d/b/a Silicon Valley Power (“SVP”); the Modesto Irrigation District (“MID”); NRG Power Marketing, Inc. and West Coast Power LLC (together, “NRG Companies”); the Northern California Power Agency (“NCPA”); and Williams Power Company, Inc. (“Williams”). A number of these comments assert that the Settling Parties failed to present additional evidence in response to the issues identified by the Commission. The Six Cities make this same assertion in a Motion to Reject.

These claims are unfounded and should be summarily rejected by the Commission. Below, the CAISO responds to specific issues raised by parties in their comments and answers the Six Cities Motion to Dismiss. For the reasons set forth herein and in the Settling Parties' Response, the Commission should approve the Offer of Settlement and the specific elements thereof.

## **II. PRICING AND COMPENSATION ISSUES**

### **A. The Six Cities' Arguments Regarding the "Necessity" of the RCST are Beyond the Scope of this Paper Proceeding and Are Without Merit In Any Event.**

The Six Cities assert that the Settling Parties have failed to establish that granting the CAISO "additional procurement authority" is a "necessary or appropriate means" of addressing the inadequate compensation of compensation for FERC Must-Offer Generators. Six Cities at 4. As an initial matter, this argument is beyond the scope of the paper hearing. The Commission asked for submittals solely with regard to the three issues identified above. See July 20 Order, Ordering Paragraph (C). Whether the RCST is "necessary" and "appropriate" is not among those issues. Regardless of whether the Commission chooses to entertain this argument, however, it is without merit. In any event, the Settlement contains many safeguards and addresses concerns that regulators and load serving entities might have with a backstop procurement mechanism.

The Six Cities made this same argument in their protest to the Offer of Settlement. The Six Cities contend that the RCST is an unnecessary fifth reliability program, in addition to what the Six Cities characterize as the CAISO's four existing programs. They identify Market Procedure M-438, the Interim

Reliability Requirements program, Reliability Must-Run (“RMR”), and the must-offer obligation. As was the case in their protest, the Six Cities mischaracterize the CAISO’s operations and several of these mechanisms. Market Procedure M-438 was developed simply to implement the CPUC’s interim local reliability requirements, which will be replaced by the CPUC’s local Resource Adequacy (“RA”) requirements. The Interim Reliability Requirement Program integrates the CAISO’s operations with California’s Resource Adequacy requirements. Neither of these procedures establishes independent CAISO reliability requirements (other than informational requirements) and these procedures do not overlap with the RMR provisions. The FERC must-offer obligation acts as a backstop to these programs, ensuring that the CAISO has capacity to draw upon in the event capacity available through the other programs is inadequate to resolve reliability requirements. Must-offer waiver denials are decided taking into account the other resources available. See Market Procedure M-432; *pro forma* tariff, §§ 40.6A.6, 40.7.6.<sup>2</sup> There is thus no overlap between these mechanisms.

Under RMR and the CPUC programs, Generators receive capacity payments. Under the must-offer obligation, Generators do not receive a capacity payment. The Offer of Settlement is a step toward resolving this inconsistency, ensuring that Generators acting as reliability backstops receive fair compensation in the form of a capacity payment. There is no overlap because RMR Units and capacity committed under the Resource Adequacy requirement are not eligible

---

<sup>2</sup> In these Reply Comments, references to sections of the “*pro forma* tariff” are references to provisions that the Settling Parties propose to include in the ISO Tariff, as described in the Offer of Settlement.

for RCST designations and are not eligible to receive a Must Offer Capacity Payment.<sup>3</sup>

Contrary to the Six Cities' argument (at 6), RCST is not an unnecessary fifth reliability program, and RCST does not constitute an "expansion" of the CAISO's procurement authority. RCST is intended as a backstop in case RA (as well as RMR) do not meet all of the CAISO's reliability needs. In particular, it substitutes for the use of must-offer waiver denials. The Settlement also included many built-in safeguards and to limit the CAISO's designations under the RCST mechanism and to ensure greater transparency. The CAISO was not given a blank check to designate RCST resources. For example, RCST designations are limited to forward Local designations, Significant Event designations and System designations when LSEs are deficient in their year-ahead or month-ahead RA showings. The Offer of Settlement also sets forth criteria governing and limitations on the CAISO's designation of RCST resources.<sup>4</sup> See *pro forma* tariff sections 43.2.3 and 43.3.3. The Settling Parties anticipated that the must-offer obligation would remain the backstop primarily for zonal needs and unanticipated needs (not giving rise to Significant Event RCST designations), and expected that its use would be circumscribed. In that regard, under the Offer of Settlement, the CAISO must commit Resource Adequacy, RCST, and RMR units before it issues must-offer waiver denials to FERC Must-Offer

---

<sup>3</sup> There is no potential for inconsistency between RMR and RCST, because RCST designations can only be made after the RMR process is complete. See *pro forma* tariff, § 2.2.4.

<sup>4</sup> For example, for System and forward Local RCST designations, the Settlement allows the CAISO to procure only slightly more capacity than the amount of the deficiency. See *pro forma* tariff sheet sections 43.2.3. and 43.3.3.

Generator units. See *pro forma* tariff section 40.7.6. As part of the Settlement, the CAISO also agreed to increased transparency with respect to Must Offer Waiver Denials and RCST designations. In that regard, the Settlement obligates the CAISO to the following reporting requirements: RCST report; Daily MOWD report; Monthly Minimum Load Cost report; and Significant Event/MOWD report. See Offer of Settlement at Article 9. This will provide increased transparency that regulators and LSEs, including the Six Cities, seek. This information will, *inter alia*, enable parties to confirm that RA, RMR and RCST resources are exhausted before the CAISO issues Must Offer Waiver denials.

The Six Cities contend that the concerns of Generators could be addressed by modifying “one of the existing approaches.” Six Cities at 6. However, the only potential candidates are RMR and Must Offer. With respect to the former, it would require a rewriting of the RMR criteria. That does not make sense given the interim nature of the Settlement. RMR was developed to address potential market power issues for units needed for local reliability. RMR designations are local in nature and would not allow the lowest-cost efficiency that can be achieved through System RCST designations. RMR is not even a reasonable substitute for Local and Significant Event RCST designations. RMR Designations require lengthy negotiations and sometimes litigation over cost-based rates. Significant Event Designations do not leave adequate time for such a process. The same is true for Local RCST Designations, because the needs will not be known until after local Resource Adequacy Demonstrations are made.

With regard to the must-offer obligation, there is the issue of inadequate compensation, but simply modifying the compensation under the must-offer obligation does not fully address the perceived inadequacies of the program. For example, generators denied Must Offer waivers would still only receive a daily capacity payment. Generators need longer-term certainty for capacity reservations for their financial stability and maintained operations. The RCST better addresses those concerns and better ensures that units needed by the CAISO for reliability will be “around.” Thus, the Settlement package is a reasonable compromise solution that addresses both compensation and longer-term availability issues..

The Six Cities also contend (at 6) that the RCST program is excessively complex, but although they cite eight paragraphs of Mr. Tang’s affidavit in support of this contention (which is attached to the Six Cities’ comments), only one of those paragraphs (¶ 33) asserts complexity and that section only addresses complexity with regard to the calculation of the Peak Energy Rent (“PER”). Unfortunately, Dr. Tang is unclear about what he considers complex as opposed to unjustified.<sup>5</sup> Each of the factors to be used in calculating the PER is presented with specificity in the Offer of Settlement and the *pro forma* tariff sections, providing full transparency. The calculation itself is no more complicated than the calculations that the CAISO must perform in determining such payments as Minimum Load Cost compensation (“MLCC”) and no more

---

<sup>5</sup> See *Explanatory Statement In Support Of Settlement Agreement of the Settling Parties and Request for Expedited Consideration and Settlement Agreement Resolving All Issues* (“ISO New England FCM Settlement”), Docket No. ER03-563, filed March 6, 2006, Offer of Settlement at pages 38-40, approved *Devon Power LLC*, 115 FERC ¶ 61,340 (2006).

complex than the PER calculations used by other ISOs.<sup>6</sup> Indeed, Dr. Tang appears to have had no difficulty calculating a PER that would have been applicable for July based on public information using a simple spreadsheet.

The entire purpose of the IEP complaint in this proceeding was to eliminate what the Commission has determined to be inadequate compensation for the must-offer obligation. This is exactly what the Offer of Settlement accomplishes.

**B. The Six Cities' Arguments Concerning the Magnitude of Must-Offer Costs Are Irrelevant and Without Merit.**

The Six Cities state that “[d]espite the CAISO’s previous assurances to the contrary . . . it now appears that the RCST Mechanism will result in substantial payments to generators and potentially considerable costs for CAISO Market Participants.” Six Cities at 6. The Six Cities’ support for this allegation is their calculation that the CAISO would have incurred “nearly \$20 million in RCST capacity payments” between June 1, 2006, and July 24, 2006. *Id.* The costs cited by the Six Cities, however, are not potential RCST capacity payments, but rather must-offer capacity payments. SWP makes a similar complaint. It improperly compares the estimated \$21 million in capacity costs with the CAISO statement that the RCST would impose few or no costs on participants. SWP also cites as inaccurate the CAISO’s prediction of a significant reduction in waiver denials. SWP at 7. In fact, the June-August costs and waiver denials are entirely consistent with the CAISO’s previous comments, and actually

---

<sup>6</sup> See, e.g., Settlement Agreement, Docket Nos. ER036-563-000 (filed Mar. 6, 2006), at Section 11, Part V.B (“Devon Power Settlement Agreement”); *Devon Power LLC*, 115 FERC ¶ 61,340, at PP 24, 131 (2006).

demonstrated the effectiveness of the Resource Adequacy program in reducing reliability costs assessed by the CAISO.

As the CAISO stated in the Reply Comments it submitted in this proceeding on May 1, 2006 (“May 1 Reply Comments”), which are cited by the Six Cities and SWP, the Resource Adequacy designations were sufficient to meet the CAISO’s Local Area Reliability Needs (“LARN”), and no Local RCST Designation would have been necessary. Since June 1, 2006, there have been no deficiencies in monthly System Resource Adequacy demonstration, so no System RCST Designations would have been necessary. The CAISO has not evaluated whether any Significant Event designations would have occurred, but any such designations would have been minimal.

With regard to must-offer waiver denials, the \$21 million was an estimate prepared by the CAISO that did not take into account the PER deduction resulting from the high Market Clearing Prices during this summer. That number is a gross overestimate when these factors are considered. As described in Exhibit A, the Second Declaration of Mr. Rothleder, using a PER based on actual market prices, the must-offer capacity costs for June-August are approximately \$6.8 million. Thus, the proposed PER has performed its intended function of ensuring that Generators do not receive a windfall from high market prices.

Moreover, the volume of must-offer waiver denials was consistent with the number that would have been expected as discussed in the CAISO’s May 1, 2006, Reply Comments. The CAISO stated:

The capacity payment for FERC Must-Offer Generators, for example, will be infrequent. As explained in the declaration of Mark

Rothleder, attached as Exhibit A, based on expected Resource Adequacy designations, of the 1287 unit-days of must-offer waiver denials during 2005, only 218 unit-days involved units that will be FERC must-offer resources,<sup>[7]</sup> and eligible for the additional capacity payment, in 2006. The remainder would be Resource Adequacy Resources – ineligible for the capacity payment and eligible for Minimum Load Costs Compensation only to the extent necessary based on the imbalance energy payments.

CAISO May 1 Reply Comments at 5. As further discussed in Exhibit A, in June-August 2005, there were 438 unit-days of must-offer waiver denials of which 160 involved units that are not currently Resource Adequacy units. During a comparable period in 2006, there were 141 unit-days of FERC must-offer waiver denials (all involving units that are not Resource Adequacy units, which are not subject to the FERC must-offer requirement). This figure is thus consistent in scope with Mr. Rothleder's initial prediction. More importantly, it demonstrates that the Resource Adequacy program, as implemented in the CAISO's Interim Reliability Requirements Program, has produced a significant reduction (68%) of FERC must-offer waiver denials. It is indeed true that the units subject to must-offer waiver denials in summer 2006 would have received a capacity payment, but that is the purpose of the settlement – to provide adequate compensation to Generators providing the CAISO with reliability capacity.

**C. The Commission Should Reject the Six Cities' Arguments Regarding the Target Annual Capacity Price.**

The Six Cities contend that if the Commission approves an RCST, it should specify a fixed capacity payment of \$25/kW-year, representing a capacity

---

<sup>7</sup> As part of the preparation of the instant Reply Comments, Mr. Rothleder has reviewed his calculations, and determined that the number of units identified as non-RA was incorrect. In fact, of the 1287 unit-days of must-offer waiver denials during 2005, 353 unit-days involved units that will be FERC must-offer resources. Exhibit A at.

payment of \$52/kW-year, less a fixed PER of \$29/kW-year, with a 10% adder. Six Cities at 11-13. The Six Cities' arguments in favor of this proposition are baseless.

First, the Six Cities contend that it is inappropriate to base the payment on the cost of new Generation because the RCST is only an interim program. Six Cities at 11-12. The Six Cities' claim that the RCST capacity payment reflects the cost of new generation is incorrect. The proposed \$73/KW-year target capacity payment is a negotiated compromise amount that was agreed to by the vast majority of suppliers, the vast majority of load that will be paying the rates proposed in the settlement and the CPUC which has jurisdiction over such load. The negotiated compromise number is not based on any specific cost study, Commission decision on capacity prices in other ISO/RTO markets, or costs of specific new or existing units.<sup>8</sup>

In particular, contrary to the Six Cities' claims, the proposed target capacity payment amount does not reflect the cost of new capacity, it is lower than the cost of new capacity. The most relevant comparison is the CEC's cost study from 2003 which found that the annualized costs of constructing a new combustion frame turbine in California were \$78/kW-yr (\$88/kW-yr in 2006 dollars when adjusted for inflation). See Exhibit No. 1 to the instant Reply Comments. The proposed \$73/KW-year price is *well below* the mean (\$82/kW-yr) of the various estimates presented in the Affidavit of A. Joseph Cavicchi

---

<sup>8</sup> As the CAISO indicated in its May 1 Reply Comments, "the \$73/kW-year RCST capacity payment is supportable whether the Commission determines that the payment should be based on the costs of building a new unit or be within the range of the fixed costs of existing units." CAISO May 1 Reply Comments at 28 (footnote omitted).

(which was provided as part of the Settling Parties' August 21 Response), and indeed is less than four of five studies regarding the annualized cost of new frame CTs, and the fifth study has been challenged at the Commission as being too low an estimate. Moreover, Williams has presented additional data demonstrating that the real cost of new Generation in California may be considerably higher than any of the estimates presented by Mr. Cavicchi. Thus, the \$73/kW-year capacity payment is considerably lower than the cost of new construction.

Also, as indicated in the Settling Parties' August 21 Response, a \$73/kW-year capacity payment (minus a PER) is in the range of capacity cost prices that the Commission has used in the eastern ISOs. See Settling Parties' August 21 Response at 5-6. Particularly apt is the ISO-NE transitional Forward Capacity Market payment structure. The transitional payments for **all** existing installed capacity start at \$3.05/kw-month (\$36.6/kw-yr) and increase to 4.10/kw-month (\$49.2/khw-yr) in the second year. Importantly, there is no PER reduction from these values. See Devon Power Settlement Agreement at A1, 11, VIII, D and attached affidavit of David LaPlante; see *also* ISO New England Reply Comments Regarding Settlement Agreement Resolving All Issues, P. 31, Docket No. ER03-563, filed April 15, 2006. If the proposed \$73/kW-yr target capacity price is reduced by Mr. Tang's PER of \$29, the resulting payment proposal is in the range of the transitional payments in ISO-NE. The Commission found the transitional payments in the ISO New England FCM Settlement to be "well within

the range of reasonableness.”<sup>9</sup> 115 FERC ¶61,340 at PP 101-03. It follows that the proposed RCST payments must be within the range of reasonableness as well.

Finally, \$73/kW-year is within the range of the annual fixed costs of existing RMR units and, in particular, is only slightly above the weighted average annual cost for non-hydroelectric units (*i.e.*, \$64/kW-year) -- the types of units that will be eligible to receive a RCST capacity payment or a Must-Offer Capacity Payment.<sup>10</sup> See Exhibit No. 1 hereto; see *also* Exhibit B to the CAISO’s May 1 Reply Comments.

In the CAISO’s May 1 Reply Comments, the CAISO showed that the target annual capacity price is within the range of the fixed costs of current RMR Units. That range included hydroelectric units that are RMR. Dr. Tang calculated his proposed \$52/kw-year AFRR based on the mean (per kilowatt) AFRR of the units identified in Exhibit B of the May 1 Comments. Although the CAISO provided a listing of the AFRRs for those RMR units whose cost information was publicly available for purposes of demonstrating that the proposed annual RCST capacity price was within the range of the AFRRs of existing RMR units. However, the weighted average AFRR of all units in that

---

<sup>9</sup> Also, it is important to note that the ISO New England transitional payment will be paid to **all** installed capacity on an **annual** basis. On the other hand, any RCST capacity payments will be paid only to units receiving RCST designations, and the designation may not be annual. Further, the Must-Offer Capacity Payment is only paid to units that are denied must-offer waivers, and the payment is a daily one not an annual one. Thus, the total amounts paid to a unit under the ISO New England transitional mechanism will almost certainly be more than the total annual capacity payments (MOO and RCST) minus PER paid to Eligible Capacity under the Offer of Settlement.

<sup>10</sup> Averaging the average annual cost of new frame CTs, *i.e.*, \$82, with the average cost of non-hydroelectric RMR Units, *i.e.*, \$64, yields a price of \$73. A \$73/kW-year capacity price is eminently reasonable under these circumstances.

listing does not serve as an appropriate basis for comparison with the Target Capacity Price because it includes hydroelectric units, which are not eligible for RCST designation and are not subject to the must-offer obligation and as such will not earn RCST or Must-Offer Capacity Payments. A more appropriate evaluation would exclude hydroelectric RMR Units from the calculation (see Offer of Settlement, § 1.4; ISO Tariff, § 40.7.1), but even that approach would be flawed for the reasons discussed *infra*. In Exhibit A to the instant Reply Comments, Mr. Rothleder demonstrates that the weighted average fixed cost of non-hydroelectric RMR Generation in the CAISO Control Area is \$64/kW-yr, significantly greater than the \$52/kW-yr used by the Six Cities to analyze the costs of capacity payments that would be paid only to non-hydro units based on the annual revenue requirement on the costs of a set of units that includes extremely low cost hydro units – units that are not even eligible to receive RCST or Must-Offer Capacity Payments – is illogical and unreasonable. The proposed target annual capacity price is less than fifteen percent above the \$64/kW-yr weighted average cost of existing RMR units, excluding hydroelectric units. Certainly this capacity price (along with a PER deduction) should be considered to fall within a range of reasonableness given that the price, in addition to being within the range of RMR prices, is (1) below the cost of new construction, (2) within the range of capacity (including PER) prices that FERC has approved elsewhere, and (3) the product of settlement negotiations in which each party made concessions.

Further, the \$73/kW-year capacity payment is justified not only as a product of settlement, but also as good policy; because it will maintain the economic viability of Generators that are necessary to ensure the reliability of the CAISO Control Area. Basing the payment solely on weighted average RMR costs would fail to recognize that RMR units have annual contracts and receive annual capacity payments. In other words, they have year-round certainty. On the other hand, MOWDs are issued on a daily basis and FERC must-offer units are only eligible to receive a daily capacity payment if they are denied a must-offer waiver. Further, RCST designations may not be on an annual basis. RCST units and FERC Must-Offer Generators do not have the same certainty of annual payments as do RMR Units. If a unit needed for reliability does not have an annual capacity contract, it must find a way to earn the revenues needed to keep it operating for the few times that it is called to provide reliability service. That opportunity generally comes in the form of higher payments during the times that it does operate for reliability purposes. Moreover, even assuming *arguendo* that the duration of the proposed RCST may be too short to constitute a specific incentive to new Generation, setting the target annual capacity price at a level that takes this factor into account provides a strong signal that the California markets recognize the importance of maintaining the financial integrity of Generators.

Second, the Six Cities' contention that the level of the Must-Offer Capacity Payment under the Offer of Settlement will create a disincentive to participate in prescheduled, bilateral energy markets and the CAISO Ancillary Services market

(Six Cities at 12) is completely unrealistic. The Six Cities argue that Generators will “wait to receive [must-offer waiver denials]” rather than participate in forward bilateral or Ancillary Services markets. Generators cannot afford to await a must-offer waiver denial because there is no guarantee that such a denial will be forthcoming. By arranging a bilateral transaction or submitting a successful bid in the Ancillary Service markets, a Generator can be guaranteed a payment. If it does not take advantage of those opportunities, it has no guarantee that it will receive any type of payment. Certainly “a bird in the hand is worth two in the bush.” The Must-Offer Capacity Payment would need to be much greater before any rational Generator would forego the certainty of forward transactions.

In contrast, a Must-Offer Capacity Payment that is too low could provide a disincentive for Load-Serving Entities to enter into bilateral arrangements with units that are needed for reliability purposes. Unlike Generators, who can not be assured of must-offer waiver denials or successful bids in the Ancillary Services markets, Load-Serving Entities can be assured that the CAISO will ensure that reliability needs are met. If the RCST and daily Must-Offer Capacity Payments are too low, LSEs will simply rely on the CAISO, who would be able to “procure” the necessary reliability resources more cheaply through the must-offer process.

Third, the Six Cities argue that a fixed PER based on prices from 2005 is necessary because the proposed market-based PER is “excessively and unnecessarily complicated.” Six Cities at 13. The Six Cities contend that the Settling Parties have failed to explain how the PER would work or the parameters

to calculate it. As the CAISO has noted above, however, the elements of the calculation of the PER are clearly set forth in the Offer of Settlement:

Immediately following the end of the calendar month, the CAISO shall identify the hours during which the Reference Resource would have been Dispatched (based on Reference Resource characteristics specified in Section 6.1 to provide either Energy or Non-Spinning Reserves), and will calculate, on a per kW-Month basis, the total dollar amount of Rent that would have been earned by the Reference Resource. "Rent" means the earnings in excess of Reference Resource variable costs calculated using Reference Resource unit characteristics specified in Section 6.1.

Offer of Settlement at 17. Again the PER calculation is clear enough that Dr. Tang is able to perform a calculation using a spreadsheet and publicly available data.

The calculation of the PER is essentially the same as that included in the ISO New England ("ISO-NE") local installed capacity ("LICAP") settlement, which the Commission recently approved. *Devon Power, LLC*, 115 FERC ¶ 61,340 (2006). In that proceeding, the Commission noted that "[t]he peak energy rent deduction is designed as a hedge for load against price spikes in the energy market." *Id.* at P 24. As the Commission stated:

The peak energy rent deduction is intended to help mitigate incentives to create price spikes in the energy market. Settling Parties assert that, while it may be profitable to raise prices in the energy market, the peak energy rent mechanism will remove any profits gained from the rise in prices because the extra revenues earned in the energy market are deducted from capacity payments.

*Id.* at P 29. A fixed PER would not further these important objectives. If it was just and reasonable for the Commission to approve a PER based on actual market outcomes for ISO New England, it is just and reasonable to do so here.

Moreover, calculation of the RCST payment using a flat PER based on historical data would not provide just and reasonable compensation. For example, the \$29/kW-year used by the Six Cities is based on 2005 market conditions. It does not reflect, for example, the changes in January 2006 to the bid cap or the effects of the summer 2006 heat wave. Regardless of whether such factors are favorable or unfavorable to Generators, a just and reasonable rate should take them into account. A fixed PER does not reflect the realities of the marketplace.

**D. The Six Cities Overstate the Potential for Duplicative Must-Offer Payments.**

The Six Cities argue that allowing FERC Must-Offer Generators to receive a capacity payment as well as MLCC and Imbalance Energy costs constitutes double payment, because the combination of Imbalance Energy payments and MLCC serves as a proxy for a capacity payment. Six Cities at 14. As an initial matter, it must be recognized that, once the FERC Must-Offer Generator receives capacity, MLCC, and Imbalance Energy payments equivalent to the Monthly RCST Capacity Payment less the Monthly PER, the Generator is no longer eligible for the daily capacity payment. Therefore, until the cap is reached, the continued payment for Imbalance Energy is simply a part of the total daily payment, and is a factor in evaluating the level of the daily capacity payment. In other words, if Generators did not continue to receive Imbalance Energy payments, a daily capacity payment greater than 1/17<sup>th</sup> of the Monthly RCST Capacity Payment might have been necessary.

While it is true that a FERC Must-Offer Generator would continue to receive both MLCC and Imbalance Energy payments after the cap is reached, it must be recognized that a FERC Must-Offer Generator that is needed for reliability does not have an RMR or RA contract of any kind, and is not designated as an RCST unit. As such, it must recover *all* of its fixed costs from the market and through must-offer compensation. Stated differently, it must recover its costs through daily “calls” not an annual contract. Retention of the Imbalance Energy payment will help such units recover their fixed costs in an environment in which they will not be receiving a capacity payment every day. In that regard, inasmuch as the CAISO will only be using must-offer waiver denials when neither RMR, Resource Adequacy units, nor RCST capacity can resolve the reliability issue, the CAISO anticipates that outside of critical periods like the Summer 2006 heat wave, FERC Must-Offer Generators will rarely reach the cap. Thus, there need to be other measures to help these units that are needed for reliability recover their fixed costs. Retention of the Imbalance energy payment is such a mechanism.

**E. The Payment to RCST Units For Availability Above 95% Is Just and Reasonable.**

Under the Offer of Settlement, the target RCST capacity payment to a unit with 95 percent Availability is \$73/kW-year. The capacity payment will be adjusted upward from the 95 percent Availability starting point by the positive percentage listed as the Capacity Payment Factor in the Availability Factor Table (*see pro forma* tariff Sheet No. 755C) by the amounts listed for each Availability Factor above 95 percent. Thus, for example, if 100% Availability is achieved for

a month, the capacity payment for that month would be the monthly value for 95 percent Availability, plus an additional 13.9 percent. If a unit were available 100 percent of the time, it would receive a monthly RCST capacity payment of approximately \$83/kW-year. Likewise, reductions in capacity payments will be made correspondingly according to the Capacity Payment Factor for monthly Availability levels below the 95 percent Availability starting point.

The CEOB urges the Commission to reject the “bonus” payment to RCST units when their availability exceeds 95 percent. The CEOB argues that there is no justification for the “bonus” payment and that such “bonus” payment does not benefit ratepayers. CEOB at 6. The CEOB contends that the “bonus” payment is simply a backdoor mechanism to increase the level of the RCST payment by 13.9 percent without giving ratepayers any additional reliability or other value-added service. *Id.* at 7.

The additional payment to RCST resources for availability above 95 percent is just and reasonable and serves as an incentive for Generators to increase the availability of their units above the reasonably expected amount. Certainly, the Commission should not reject incentives for units to be available the maximum amount of time possible.

CEOB believes that a RCST unit should be paid a capacity price of \$73/kW-year for Availability at any level between 95 and 100 percent. It is indisputable that a unit that is available 100 percent of the time provides more benefit and service than a unit that is available only 95 percent of the time. It logically follows that if it is acceptable to the CEOB to pay a unit \$73/kW-year for

being available 95 percent of the time and to pay a unit less if it is available 90 percent of the time, it should be appropriate to pay a unit more for being available 100 percent of the time.

A Generating Unit cannot be expected to function 100 percent of the time. The NERC GADS data provided as Exhibit 1 to the Settling Parties' August 21 Response shows that the availability for gas turbines over 50 MW in capacity is 92 percent and the equivalent availability factor is 90 percent. The Offer of Settlement adopts an even higher Availability Factor of 95 percent. In the comments filed on September 11, 2006, no party – including the CEOB – objected to the justness and reasonableness of the 95 percent Availability Factor.

The situation here is similar to that of an employee who has a specified amount of vacation time. That employee is not expected to work 100% of the days during the year, and the employee's salary is based on the fact that the employee is entitled to a certain amount of vacation days in which the employee will not be working. Stated differently, the employee's salary is based on the expectation that the employee will not work 365 days a year. To the extent the employee works on vacation days, the employee may be eligible for overtime pay or be able to "cash out" vacation days. Under such a scenario, the employee will be paid more than the base salary for working more than the expected number of days. The \$73/kW-year target capacity payment is comparable to the base salary paid to an employee for the number of days that the employee is expected to work, and the five percent "non-availability" factor is comparable to an employee's vacation time. In other words, the unit will be paid \$73/kW-year for

the amount of time that it is expected to work, *i.e.*, 95 percent of the time. Just like the employee who gets paid more for working on vacation days, it is not unreasonable to pay a generating unit that is available more than the expected amount of time more than the target capacity price. Thus, contrary to the CEOB's claims, there is an economic justification for the "bonus" payment, and the payment clearly benefits ratepayers by incenting generator availability.

To the extent the CEOB is implying that the Availability Factor should be set at 100 percent – the CEOB has not made that argument directly. In any event, it is not reasonable to expect a unit to be available 100 percent of the time. The NERC GADS data confirms the reasonable expectations as to unit availability.<sup>11</sup>

Finally, a RCST capacity price of approximately \$83/kW-year (minus PER) for 100 percent availability is not unjust and unreasonable. A Generator must expect to recover fixed costs with normal availability, and the \$73kW/yr Target Capacity Price presumes that a unit has normal availability. If the Target Capacity Price had been based on 100 percent availability (which is above normal availability) with reductions in the capacity price for availability below that level, such price would have to be higher than \$73/kW-year so that a Generator could still recover its fixed costs associated with normal availability. An \$83/kW-yr payment (minus PER) also is within the range of annualized cost estimates for

---

<sup>11</sup> Another way to look at this situation might be to compare the Availability Factor to sick leave for an employee. Employees are not expected to be healthy 100 percent of the time, so they are given sick leave. Likewise, as the NERC GADS data confirms, a unit cannot be expected to be available 100 percent of the time. The "bonus" capacity payment provides an incentive for units to be available more often, and this clearly benefits ratepayers.

a frame combustion turbine unit, as provided in Exhibit 1 to the Settling Parties' August 21 Response, and within the range of the annual fixed revenue requirements of RMR units. See Exhibit A; see also Exhibit B to the CAISO's May 1 Reply Comments. It is also below the annual fixed cost levels of the gas turbine units approved by the Commission for purposes of calculating the Annual Reference Values in connection with the New York ISO's Installed Capacity Demand Curves for Capability Years 2005/2006, 2006/2007 and 2007/2008. See Settling Parties' August 21 Response at 5, n. 19.

**F. Williams's Argument That Non-Spin Revenues Should Not Be Deducted From the Capacity Price Is Misplaced.**

Williams erroneously claims that the Offer of Settlement uses a "frame" unit as the Reference Resource for purposes of calculating the PER. Williams at 17. Williams proceeds to state that a "frame" unit cannot provide 10-minute non-spinning reserve and, therefore, it is inappropriate to subtract non-spinning reserve revenues from the monthly capacity price. *Id.* at 17-20. Williams's arguments are misplaced. Although the Settling Parties have provided data on the cost of a new frame unit in support of the Target Capacity Payment, that data, as discussed above, is merely evidence of the reasonableness of the Target Capacity price. The hypothetical Reference Resource used to determine the PER under the Offer of Settlement is not assumed to be a "frame" unit. Indeed, nowhere in the Offer of Settlement does it say that the Reference Resource is a "frame" unit. Contrary to Williams's claims, the Reference Resource is not a "frame" unit, it is a hypothetical unit with the characteristics negotiated by the parties, as set forth in Article 6.1 of the Offer of Settlement.

The use of a hypothetical unit for purposes of determining the PER is consistent with the approach the Commission has approved for other ISOs. In that regard, the PER used in connection with ISO-NE's Forward Capacity Market is calculated based on the costs/revenues of a hypothetical "proxy unit." See ISO New England FCM Settlement, Explanatory Statement at 31, Offer of Settlement at 38-40. In its order approving ISO-NE's contested FCM settlement, the Commission recognized that the PER was "based on revenues that would be earned in the energy market by a hypothetical proxy unit which had characteristics agreed to by the settling parties." *Devon Power LLC*, 115 FERC ¶ 61,340 at P 24 (2006).

Like the settling parties in ISO-NE, the Settling Parties here have used revenues to be earned by a hypothetical proxy unit as the basis for determining the PER. Consistent with its decision on ISO-NE's FCM Settlement, the Commission should approve the use of a hypothetical unit for purposes of calculating PER under the RCST mechanism. Indeed, Williams does not object to any of the characteristics given the proxy unit in Article 6.1 of the Offer of Settlement. In any event, Williams's claims are misplaced because the Offer of Settlement does not use a "frame" unit for purposes of calculating the PER.

**III. THE REVISED AUTOMATIC MITIGATION PROCEDURE PRICE SCREEN, BID ADDER FOR FREQUENTLY MITIGATED UNITS, AND PROPOSED TREATMENT OF RMR CONDITION 2 BIDS ARE JUST AND REASONABLE**

**A. The CEOB's Objections to the Frequently Mitigated Adder Are Without Merit.**

The CEOB argues that there is no economic justification for the bid adder for frequently mitigated units ("FMA"). CEOB at 9. The CEOB argues that the FMA will undercut the goal of achieving competitive market outcomes. The CEOB also argues that the proposal results in circumvention of the entire mitigation process because a unit can routinely be mitigated and still receive a FMA up to a unit's bid price. Finally, the CEOB claims that the FMA distorts the market by adjusting upward the real-time market clearing price ("MCP") by the amount of the bid adder. *Id.*

As an initial matter, the CEOB's claim that the FMA will result in the MCP's being increased by the amount of the FMA is incorrect. The FMA would only be paid to the specific unit that is dispatched out of sequence for reliability reasons (and whose bids are mitigated for local area constraints).<sup>12</sup> Because units that are called out-of-sequence to alleviate a local problem are not eligible to set the MCP, the payment of a FMA will not "raise the MCP by the amount of the bid adder" as claimed by the CEOB.

The other arguments the CEOB raises are essentially objections to the general concept of an adder for units that are frequently mitigated, not to the

---

<sup>12</sup> See Offer of Settlement at Article 5.3.

specific details of the FMA mechanism proposed in the Offer of Settlement.<sup>13</sup> However, the Commission has already “crossed this bridge” by approving a frequently mitigated unit bid adder mechanism for PJM<sup>14</sup> and, more recently, for the CAISO as part of its conditional acceptance of the MRTU Tariff.<sup>15</sup> In approving PJM’s frequently mitigated unit bid adder mechanism, the Commission did not find that such a bid adder “distorts the energy market” or “circumvents the purpose of the entire mitigation process.” Indeed, the Commission found that there was economic justification for PJM’s bid adder, namely, (1) it would enable units that are needed for reliability and are not recovering sufficient revenues from the market to cover their costs, and (2) it would send appropriate price signals regarding the need for new generation or enhanced load response.<sup>16</sup>

These same reasons support approval of the FMA mechanism proposed in the Offer of Settlement. In the Order on Complaint and Offer of Settlement (at P 37), the Commission already has recognized that generators may not have a sufficient opportunity to recover their fixed costs in the CAISO’s energy market.

---

<sup>13</sup> The CEOB does not raise specific objections to the level of the proposed FMA adder or challenge any specific components of the proposed FMA mechanism.

<sup>14</sup> *PJM Interconnection, LLC*, 107 FERC ¶ 61,112, at P 39 (2004), *order on reh’g and compliance filings*, 110 FERC ¶ 61,053, at PP 104-14 (2005). Although the FMA mechanism proposed in the Offer of Settlement is not identical to PJM’s frequently mitigated unit bid adder mechanism, the CEOB’s objections do not apply only to the FMA proposal contained in the Offer of Settlement, they apply to the concept of bid adders generally. Indeed, in support of its position, the CEOB refers to statements made by the CAISO Market Surveillance Committee regarding the bid adder proposed by the CAISO in its Market Redesign & Technology Upgrade (“MRTU”) Tariff filing, which bid adder is modeled after PJM’s frequently mitigated unit bid adder mechanism.

<sup>15</sup> See *California Independent System Operator Corp.*, 116 FERC ¶ 61,274, at PP 1069-1071, and Ordering Paragraph (A) (2006).

<sup>16</sup> *PJM Interconnection, LLC*, 107 FERC ¶ 61,112, at P 39; *PJM Interconnection, LLC*, 110 FERC ¶ 61,053, at PP 104-14.

The Commission also recognized that generators are often dispatched out of merit order for reliability purposes (and are ineligible to set the MCP). The FMA addresses revenue adequacy issues for units that are subject to the FERC must-offer obligation and which are taken out of merit order because the CAISO needs them for reliability purposes. These units are not fully contracted under the Resource Adequacy program and are not eligible to receive a Must-Offer Capacity Payment. In a competitive market, these units might be “mothballed” or taken out of service. However, because such units are needed for reliability purposes, an additional payment is justified to ensure that they remain available.

The FMA is essentially a substitute for an RMR contract, RCST capacity payment, or Must-Offer Capacity Payment for the portion of capacity that is needed for reliability purposes on a given day but which is not under contract. The FMA will provide additional revenues to assist in the fixed cost recovery for units that are providing a necessary local capacity service and which are mitigated with high frequency on a given day. The FMA mechanism will send price signals about the need for new generation or enhanced load response in specified areas.

Finally, as noted in the attached Declaration of Mark Rothleder, based on actual experience since June 1, 2006, the impact of the FMA is negligible. In that regard, for the period June-August 2006 there has been a total of 1585 MWh of Energy mitigated using the CAISO’s local market power mitigation measures. Of this Energy, only 91 Mwh would be eligible for the FMA because the resource was non-Resource Adequacy, non-RMR, or mitigated more than 5 intervals in

one day. This 91 MWh would be eligible for total FMA payments under the Offer of Settlement of \$3,525. That hardly rises to the level of “economic distortion” that the CEOB claims.

No other party raises specific objections to the FMA mechanism in their September 11 Comments. For the foregoing reasons, and the reasons set forth in the Settling Parties’ August 21 Response, the Commission should approve the FMA proposal.

**B. The Revised AMP Price Screen Is Appropriate as a Component of a Settlement that Is Just and Reasonable Overall.**

The CEOB claims that the Settling Parties have failed the threshold test of showing that the current AMP price screen is unjust and unreasonable. CEOB at 9. That is incorrect. In their August 21 Response (at 9), the Settling Parties indicated that the \$91.87 price screen was based on the price cap that had been approved in a June 19, 2001 order and that gas prices at the time were between \$3 and \$4 per MMBtu. The Commission established a \$91.87 price screen based on the following two considerations: (1) market clearing prices for the past 18 months had been subject to the \$91.87 limitation pursuant to mitigation measures imposed in the June 19, 2001, order and Market Participants had a history of operation at prices below this level; and (2) the purpose of the AMP price screen was to eliminate unnecessary testing of bids for potential mitigation (in particular the unnecessary deployment of resources to verify that bids do not reflect the exercise of market power). *See California Independent System Operator Corp.*, 101 FERC ¶ 61,061 at P 30 (2002). Application of those two criteria to current conditions demonstrates that the \$91.87 AMP price screen is

no longer just and reasonable. First, the \$91.87 price screen was eliminated in November 2002, and since that time, the market has operated with price limitations significantly above that level, namely a \$250 price cap from November 1, 2002-January 13, 2006 and a \$400 price screen since January 13, 2006. Second, as demonstrated in the Settling Parties' August 21 Response (at 9-10), gas prices have increased significantly since the \$91.87 price screen was adopted and have been much more volatile. Retention of the existing \$91.87 price screen could increase the likelihood of unnecessary testing for potential mitigation, something that the Commission sought to avoid in setting the level of the AMP price screen. Thus, the facts that supported a \$91.87 price screen in November 2002 no longer apply. The CEOB does not refute this evidence or offer any evidence of its own to suggest that a \$91.87 AMP price screen remains just and reasonable.

Because a \$91.87 price screen is no longer just and reasonable, the next issue is whether a \$200 price screen is just and reasonable. The CEOB argues that there is no justification for a \$200 AMP price screen. That is incorrect, as is apparent from the Settling Parties' August 21 Response. Two criteria the Commission applied to determine the level of the initial price screen also demonstrate that the \$200 price screen is just and reasonable. First, the CAISO operated with a \$250 price screen from November 1, 2002 to January 13, 2006. Thus, as it pertains to the first criterion applied by the Commission to establish the level of the existing price screen, an argument might be made that the AMP price screen should be set at \$250 because "market participants have a history

of operation at prices at or below this level,” as the Commission noted when it set the existing AMP price screen at the level of the pre-existing price cap. See 101 FERC ¶ 61,061 at P 30.

Second, as shown in the Settling Parties’ August 21 Response (at 10), gas prices in the \$10-14 range, which prices are consistent with last winter’s gas prices and NYMEX prices for January and February 2007, could result in marginal costs in the \$200 range given the characteristics of the existing fleet of internal resources. Thus, a \$200 AMP price screen is consistent with the Commission’s second reason, *i.e.*, eliminating unnecessary testing of bids for potential mitigation.

The CEOB argues that the rise in natural gas prices is not a justification for raising the level of the AMP price screen because AMP reference prices used in the conduct and impact tests are adjusted to reflect changes in natural gas prices, so bids will not fail the AMP conduct or impact tests more frequently because of higher natural gas prices. CEOB at 10. This argument misses the key point. As the Commission has recognized, the “purpose of the price screen is to eliminate unnecessary testing of bids for potential mitigation.” 101 FERC ¶ 61,061 at P 30. Leaving the price screen at its existing level in light of increased gas prices increases the likelihood of unnecessary testing of bids for potential mitigation. This is a result the Commission sought to avoid in setting the “appropriate” level of the AMP price screen.” Thus, increased gas prices directly impact one of the two criteria the Commission applied to determine the appropriate level of the AMP price screen.

These considerations demonstrate that the \$200 price screen is a negotiated number that is just and reasonable, especially considering that it is a component of a comprehensive, delicately balanced settlement package which overall is just and reasonable

**C. The Proposed Treatment of the Cost-Based Bids of RMR Condition 2 Units Is Just and Reasonable.**

The CEOB argues that the Settling Parties have failed to proffer evidence that the proposal to clear market-based Ancillary Services bids before using the cost-based bids of RMR Condition 2 units is just and reasonable or that there is a nexus between changing the RMR Condition 2 bid procedure and a fair payment for a capacity reservation service. CEOB at 11-12.

As the Settlement Parties have previously noted, in reviewing a settlement, the Commission must determine whether the overall package, as presented, presents an acceptable outcome of the case that is consistent with the public interest. *Devon Power LLC*, at P 59 (2006). If a settlement provides an acceptable outcome, the Commission must next determine the approach it will take to address the contested issues. If there is an adequate record, the Commission can address each of the contested issues on the merits and approve the contested settlement if the Commission finds that each of the contesting party's concerns lack merit. *Id.* at P 60. In instances where the Commission cannot approve the settlement under the first approach, it can be approved under other approaches. Under one alternative approach, even if some individual aspects of a settlement may not be just and reasonable standing alone, the Commission may approve a contested settlement as a package if the

overall result is just and reasonable. *Id.* Under this approach, the Commission will not make a merits decision on whether each and every element of the settlement package is just and reasonable, but will determine whether the overall package falls within a zone of reasonableness. *Id.*

The CAISO submits that the RMR Condition 2 proposal can be approved under either approach. In evaluating the adequacy of reliability compensation in the Offer of Settlement, the Commission should not act, as the CEOB suggests, with an overly narrow focus and address only the pricing for capacity reservation services. It is appropriate for the Commission to examine the overall market design and determine whether other market design changes are appropriate to resolve the broader issue of reliability compensation in the market. Stated differently, the Commission should not examine reliability compensation issues in a vacuum. Ancillary Services are reliability services; so it is not inappropriate to consider changes to the Ancillary Services markets as part of a Settlement that addresses the adequacy of compensation for reliability services being provided in the marketplace. Given that RCST units will have a must-offer obligation to offer Ancillary Services to the extent capable (see Article 4.3 of the Offer of Settlement), it is especially appropriate to address Ancillary Services compensation issues as part of the Offer of Settlement.

The CAISO submits that the proposed treatment of RMR Condition 2 bids is an acceptable *short-term* market design change under the circumstances. The proposal is especially appropriate as an element of a broader, negotiated settlement that had to resolve difficult and contentious compensation issues.

The proposed treatment of RMR Condition 2 cost-based bids will only be in effect until MRTU is implemented. Moreover, the only units eligible for this treatment are those RMR units that were Condition 2 prior to the filing of the Offer of Settlement. Thus, the impact of the proposal will be limited. The proposal will allow market-based bids, including market-based bids from units subject to the FERC must-offer obligation and RCST units, to determine Ancillary Services MCPs before any cost-based bids are taken. That is not unreasonable for the interim period until MRTU implementation.

The CEOB also raises concerns about suppliers exercising market power in the Ancillary Services market. It is the responsibility of the CAISO's Department of Market Monitoring to monitor the market for evidence of the exercise of market power. In the event that market power is being exercised the appropriate response should be to propose appropriate mitigation measures to address the situation and take any other appropriate actions.

#### **IV. COST ALLOCATION ISSUES**

##### **A. Arguments Regarding the Amount of Evidence Concerning Cost Allocation**

Various parties raise specific issues regarding allocation, which the CAISO discusses in the sections below. There are, however, certain overarching themes regarding an alleged lack of evidence regarding allocation in the Settling Parties' August 21 Response and the governing principles. These arguments are without foundation.

As a general matter, the types of “evidence” that are relevant to allocation are limited. For the most part, the elements of the allocation methodology, causes and benefits of costs incurrence are readily apparent, and the outstanding issues are policy issues. The Settling Parties’ August 21 Response addressed the Commission’s request for an explanation of the allocation methodologies and identified the factors underlying each allocation. There were simply no new factual issues requiring any evidentiary showings. This is especially the case for issues like the allocation of MOWD capacity costs, where the Settling Parties did not propose a specific allocation methodology in the Offer of Settlement but agreed to abide by whatever allocation methodology the Commission approves in the Amendment No. 60 proceeding regarding the allocation of Minimum Load costs. Similarly, with respect to the Frequently Mitigated Bid Adder, the settlement potentially adds additional costs to costs for which there already is an existing allocation methodology in the tariff. Further, evidence is no more necessary with regard to costs incurred as the result of deficient resource showings; it is clear that allocation to the parties that directly caused their incurrence is consistent with cost causation. No additional showings are needed. Indeed, the Comments filed subsequent to the Settling Parties’ August 21 Response raise no factual (as opposed to legal and policy) issues regarding allocation.

The Six Cities contend that the Commission should require the CAISO to provide data documenting the reasons for must-offer waiver denials prior to approving any allocation methodology. They assert that it is unclear why,

contrary to the CAISO's statement in its May 1 Reply Comments, so many waiver denials have been issued in recent months. As an initial matter, as discussed above, the magnitude of recent must-offer waiver denials is not inconsistent with the CAISO's prediction.

Moreover, documentation of the actual causes is irrelevant to the justness and reasonableness of the proposed methodology. Whether local causes accounted for 10, 20, or 50 percent of the must-offer waivers this summer, and whether the CAISO properly classified the waiver denials, simply have no bearing on whether it is just and reasonable to allocate must-offer capacity costs incurred for local reasons to the local Participating Transmission Owner, for zonal reasons to zonal load, and for system reasons first to underscheduling and then to Control Area load, as is proposed. Issues concerning the magnitude of the CAISO's use of must-offer waiver denials and their proper classification are beyond the scope of this proceeding. In any event, one of the benefits of the Offer of Settlement is the increased reporting requirements imposed on the CAISO and the increased transparency that will result. Offer of Settlement at Article 10. Stated differently, the Offer of Settlement that Six Cities opposes will in fact accomplish Six Cities' goal in its request for information. Section 10.1.2 of the Offer of Settlement requires the CAISO to prepare a daily must-offer waiver denial report identifying the purposes for which must-offer waiver denials were issued by category and the amount of megawatts involved in each category. The CAISO must publish the report on its website on a weekly basis, and provide a Market Notice of its availability. In addition, on a daily basis, thirty (30) days after

the Trading Day, the CAISO will publish on OASIS the allocation of MLCC Uplift, Minimum Load Costs for resources under RA, RCST, and Eligible Capacity.

The “examples” cited by SWP do not support any different conclusion. SWP states that the Settling Parties’ August 21 Response provides no information on how the approximately \$21 million in Must Offer Capacity Payments<sup>17</sup> that would have been incurred from June to August would be allocated. SWP at 14. However, that allocation is clearly set forth in the Offer of Settlement. If the Commission makes the Offer of Settlement effective June 1, 2006, must-offer capacity costs will be allocated in accordance with the decision regarding MLCC in the proceedings on Amendment No. 60. The Joint Parties explain why the costs should be allocated using the same methodology, and discuss that issue further below in connection with time-of-use and Existing Transmission Contract issues. Such evidence as may be relevant to that methodology has already been presented in the Amendment No. 60 proceeding. If the Joint Parties are correct that, as a matter of policy, it is just and reasonable to allocate the capacity costs in the same manner as MLCC, there is no need for additional evidence.

SWP’s suggestion that the \$21 million might also be designated retroactively as Significant Event designation costs is unrealistic. The Offer of Settlement sets forth a specific process for making Significant Event designations, and the Offer of Settlement does not provide any mechanism for retroactive Significant Event designations. Even if the CAISO could retroactively

---

<sup>17</sup> As discussed above, review of the actual, as opposed to estimated, MCPs indicates that the payments would only have been \$6 million.

determine when it would have made a Significant Event designation, it would be virtually impossible to reproduce the changes in must-offer waiver denials and dispatches that would have resulted.

Further, any Significant Event designations can only occur after the Commission authorizes the RCST program (or clarifies that it has authorized it on an interim basis). Because Significant Event designations occur in response to unanticipated events, it is impossible for the Settling Parties to present specific evidence in advance of an event occurring – as SWP contends is necessary (SWP at 14-15) -- regarding the facts that will support a specific designation. All that can be done is to provide the general parameters for such designations, and the Offer of Settlement does that. Such designations will occur on a case-by-case basis, and the CAISO will be required to justify any Significant Event designation in accordance with the Offer of Settlement. Thus, the reasons underlying any specific significant event designation will be transparent. To the extent a market participant believes that a particular Significant Event designation is not justified under the Settlement, it can file a complaint with the Commission. The transparency provided by the Settlement allows this.

For these reasons, it is appropriate for the Settling Parties to rely, as they did in their August 21 Response at pages 22-24, on the Commission's prior conclusion in Opinion No. 459 that the resolution of local reliability issues benefits all users of a Participating Transmission Owner's former system. The Commission recognized there that, even if only one class of customer causes the need for reliability services, "these services nevertheless provide system-wide

reliability benefits due to the integrated nature of the transmission grid” and the expense for the services “should be paid for by all users of the grid because of the grid-wide benefits.” *Pacific Gas and Electric Co.*, 100 FERC ¶¶ 61,160 at P 15 (2002).

*Pacific Gas and Electric Co. v. FERC*, 373 F.3d 1315 (D.C. Cir. 2004), does not preclude the Commission from relying on this finding. The court’s conclusion in that case did not rely upon a lack of “evidence.” Rather, the court concluded that there was no logical connection between the benefits that parties would receive from the wind-up of PX operations and the allocation of costs based on outstanding accounts receivable. In contrast, the court has affirmed the Commission’s allocation of reliability costs on a grid wide basis. *Western Mass. Elec. Co. v. FERC*, 165 F.3d 922 (D.C. Cir. 1999), *aff’g Western Mass. Elec. Co.*, 66 FERC ¶¶ 61,167 (1994).

SWP’s reliance on *PJM Interconnection, LLC*, 107 FERC ¶¶ 61,112 (2004), SWP at 11, is also misplaced. Although the Commission approved in *PJM* and in some other instances more granular cost allocation methods, particularly with regard to uplift charges, it does not insist upon a particular degree of granularity.<sup>18</sup> For example, a broad allocation of reliability costs may be appropriate when a narrow allocation would be overly burdensome to certain

---

<sup>18</sup> For example, in *PJM Interconnection, LLC*, 107 FERC ¶¶ 61,112 at P 74 (2004), the Commission addressed reliability compensation costs for load pockets that could not be addressed through system redesign, but required infrastructure improvements. It expressed its preference that such cost allocations be performed at the local level when possible. In *Midwest Independent Transmission System Operator*, 108 FERC ¶¶ 61,163 at P 587 (2004), the Commission approved a cost recovery method that departed from the gross load method and instead allowed the Midwest ISO to charge must-offer reliability costs to participants based on net deviations from their day-ahead schedules.

participants and would discourage these participants from participating in the electricity market. *ISO New England, Inc.*, 111 FERC ¶ 61,442 at P 17 (2005). In short, contrary to SWP's brightline arguments, the justness and reasonableness of a particular allocation methodology may be affected by various factors, and more than one allocation methodology may be just and reasonable.

#### **B. Time of Use Issues**

SWP argues that the Offer of Settlement in current form does not use a coincident peak methodology for cost allocation. This is not correct. Section 12.3 of the Offer of Settlement provides, "Costs for Local RCST Designations triggered by Significant Events will be allocated to all SC RA Entities in the TAC Area(s) in which the Significant Event causes, or threatens to cause, a failure to meet ARC, based on a Scheduling Coordinator's RA Entity's Load Share Percentage in such TAC Area(s)." Under Section 43.2.1.1 of the *pro forma* tariff provisions, "The RA Entity Load Share Percentage shall be calculated for each RA Entity by dividing the RA Entity's actual annual coincident peak Load in each TAC Area in 2005 ('RA Entity Load Share') by the total coincident peak Load of all RA Entities in the TAC Area in 2005 ('Total TAC Load')."

There are only two other types of costs to be allocated under the Offer of Settlement: those of any future Monthly System RCST Designations and those of the Must-Offer Capacity Payments. The cost of Monthly System Designations could not be more directly tied to cost causation as SWP interprets it: the costs

are imposed on those SC-RA Entities with the deficient Resource Adequacy demonstrations that occasioned the RCST designation.

Under the Offer of Settlement, the cost of Must-Offer Capacity Payments will be allocated in accordance with the allocation of MLCC under Amendment No. 60. The just and reasonable allocation of MLCC will be determined by the Commission, as discussed above, in Docket No. ER04-835, and will be applicable here. As indicated in the Settling Parties' Response, the same actions that give rise to the incurrence of MLCC also give rise to the incurrence of daily must-offer capacity costs. Nowhere does SWP dispute this fact, nor can it.

SWP attempts to distinguish the Must-Offer Capacity Payments from MLCC on the basis that the former are energy payments and the latter are capacity payments. As discussed in the context of Existing Transmission Contracts, *supra*, this distinction – although important in some contexts – is not relevant here. Accordingly, it is both reasonable and appropriate that Must-Offer Capacity Payments be allocated in the same manner as MLCC.

### **C. Exports and Wheel Throughs**

MID notes for the record its “continuing protest as to the allocation of [must-offer obligation] and MLCC costs to exports and wheel-through transactions serving load inside California but outside of the CAISO control area.” MID at 3-4. As MID acknowledges, this issue is before the Commission in the Amendment No. 60 proceeding in Docket No. ER04-835. It need not be addressed in this proceeding.

#### **D. 2007 Allocation**

SVP contends that the Commission cannot find the Offer of Settlement just and reasonable because it does not set forth the allocation of 2007 local RCST costs, but rather defers that allocation for a later CAISO filing under Section 205 of the Federal Power Act. SVP at 3-4. This argument lacks merit. If the allocation must be filed under Section 205, then it will not go into effect unless the Commission approves it as being just and reasonable.

The Commission often approves costs as being just and reasonable without simultaneously approving the allocation. For example, the Commission will approve cost of service settlements while rate design and cost allocation issues are pending hearing or further settlement proceedings. See, e.g., Letter Order of February 27, 2002, approving uncontested settlement in Docket No. ER01-831, certified in *San Diego Gas & Elec. Co., et al.*, 93 FERC ¶ 63,015 (2002) (establishing Transmission Revenue Requirements but leaving allocation between High and Low Voltage Transmission Revenue Requirements to be established according to the outcome of the CAISO's transmission Access Charge proceeding in Docket No. ER01-2019); Letter Order of August 7, 2006, approving uncontested settlement in Docket No. ER05-1284, certified in *Pacific Gas & Elec. Co.*, 115 FERC ¶ 63,019 (2006) (settling Transmission Owner Tariff with one policy and legal issue reserved for the Commission). The proceeding in Amendment No.60 is another example. Specifically, Amendment No. 60 to the ISO Tariff modified the CAISO's must-offer process and authorized additional must-offer payments to Generators. The Commission approved most of

Amendment No. 60 as just and reasonable (and directed changes to other portions to render them just and reasonable), but set the allocation issues for hearing. *California Independent System Operator Corp.*, 108 FERC ¶ 61,022, Ordering Paragraph (A) (2004). Similarly, the Commission accepted as just and reasonable (with certain matters set for hearing) the inclusion of the transmission revenue requirement of the City of Vernon in the CAISO's transmission Access Charge while the justness and reasonableness of the allocation of the Access Charge was still being litigated. Thus, nothing<sup>19</sup> precludes acceptance of this settlement as just and reasonable while reserving the allocation of 2007 local RCST costs. The justness or reasonableness of the costs to be paid suppliers for the reliability services they provide is not dictated by the allocation methodology that is ultimately approved, and vice-versa.

#### **E. Timing Issues**

The Six Cities contend that the 2006 allocation of System RCST costs improperly requires a Load-Serving Entity ("LSE") that is deficient for one month to bear the costs of deficiencies for the three-month period of an RCST designation, with the result that LSEs that are deficient in subsequent months will not bear the RCST costs of their deficiencies. Six Cities at 15. The Six Cities' argument fails to take into account the fact that the LSE will receive a three-month credit for the RCST designation in determining its monthly deficiency. Any new deficiencies will result in new RCST designations, and the newly deficient LSEs will bear the costs of such designations. Thus, LSEs that are deficient in

---

<sup>19</sup> See *City of Vernon, California*, 93 FERC ¶ 61,103 (2000), *reh'g denied*, 94 FERC ¶ 61,148 (2001).

months two and three following a prior RCST designation(s) will not be able to piggy-back off of the previous designations.

The Six Cities also claim that there is a flaw in the allocation methodology for must-offer capacity costs as a result of the monthly cap on Must-Offer Capacity Payments and the Amendment No. 60 methodology. In that regard, once the monthly cap is reached, a unit is no longer eligible to receive Must-Offer Capacity Payments during a given month, but the unit remains subject to the must-offer obligation. The Six Cities state that this could result in a situation where, for example, the cap is reached after a unit has been denied a waiver 17 times in a month for a zonal reason, but has its waiver denied afterwards for different reasons (*e.g.*, local or system) some other day(s) before the end of the month. Six Cities objects to the fact that the Must-Offer Capacity Payment would be allocated in accordance with the first 17 reasons for the MOWD and not for any MOWDs occurring after the 17th MOWD.

The CAISO submits that the proposed allocation is just and reasonable. From the CAISO's perspective it is more administratively straightforward and less burdensome than the methodology proposed by the Six Cities. Also, it is consistent with strict cost causation. In the example above, only the first 17 MOWDs give rise to the incurrence of a Must-Offer Capacity Payment, any MOWDs thereafter do not result in the incurrence of a capacity payment. The CAISO recognizes that it might be possible to have more than one methodology that is just and reasonable. The Commission's obligation is to approve a methodology that is just and reasonable; it is not required to approve the most

perfect methodology. Because the Settlement's methodology is just and reasonable, it should be approved.

#### **F. Existing Contracts**

SWP objects to the allocation to load served by Existing Contracts of any costs under the Offer of Settlement. SWP relies primarily on Opinion No. 459, *Pacific Gas & Elec. Co.*, 100 FERC ¶ 61,160 (2002),<sup>20</sup> which the Settling Parties discussed in their August 21 Response. As explained there, under Opinion 459 and Opinion 477,<sup>21</sup> the determinative question regarding the ability to charge Existing Transmission Contract customers for reliability costs is whether the services provided are the same services that are provided under the Existing Transmission Contracts. *See also California Independent System Operator Corp.*, 103 FERC ¶ 61,114 at PP 50-52 (2003). The Commission reiterated this criterion in *Transmission Owners of the Midwest Independent Transmission System Operator, Inc.*, 110 FERC ¶ 61,339 at PP 28-38, *reh'g denied*, 113 FERC ¶ 61,122 (2005).

---

<sup>20</sup> SWP asserts generally that, under Commission precedent, because reliability is inherent in contractual firm transmission service, firm Existing Transmission Contracts cannot be forced to bear additional reliability costs absent unbundling and contract revision. The Commission precedent cited by SWP does not go nearly that far. *California Independent System Operator Corp.*, 89 FERC ¶ 61,229 at 61,682 (1999), merely states that Existing Transmission Contract customers should not pay CAISO Inter-zonal Congestion Charges because the Existing Transmission Contracts do not contemplate that the customers would be charged for congestion. *Midwest Independent Transmission System Operator, Inc.*, 108 FERC ¶ 61,236 at P 162 (2004), concerned transmission usage charges, FTR debits and credits, and uplift costs that the Commission concluded were substantially similar to the redispatch costs associated with the reliability services at issue in Opinion Nos. 459. *Consolidated Edison Company of New York, Inc., v. Public Service Electric and Gas Company, Inc.*, 105 FERC ¶ 61,343 at P 23 (2003), did not address in any manner reliability charges to existing contract customers under an ISO tariff. Rather, the Commission was interpreting ambiguous provisions of a specific contract regarding a utility's responsibility to redispatch in order to support firm service.

<sup>21</sup> *Pacific Gas and Electric Company*, 109 FERC ¶ 61,093 (2004).

Only two types of charges apply to load served by Existing Transmission Contracts under the Offer of Settlement. The first type is charges for Significant Event RCST designations. As defined in the Offer of Settlement, for 2006, “a ‘Significant Event’ may occur when a material difference in CAISO-Controlled Grid operations occurs relative to what was assumed in developing the 2006 LARN Report and that causes, or threatens to cause, a failure to meet [Applicable Reliability Criteria].” Significant Event designations provide a back-up service that was not available under Existing Transmission Contracts. Prior to the formation of the CAISO, utilities would plan their capacity needs based on applicable reliability criteria. Utilities had no obligation to provide for transmission capacity that might be needed to address a change in grid operations that was not anticipated in those criteria. If such an event occurred, and the necessary capacity was not available, firm Existing Transmission Contract schedules would be subject to curtailment to the same degree as (and, in some cases, a greater degree than) native load until the issue could be resolved.

In contrast, the authority to make Significant Event designations allows the CAISO in such circumstances to draw upon all uncommitted capacity that is Eligible Capacity. Thus, the CAISO can immediately ensure the commitment of the necessary capacity to address the problem until the underlying cause is resolved. The designation of such capacity would allow Existing Contracts to be served as well as new firm use. This service might not otherwise be provided to either but for the RCST designation. This ability to create such back-up capacity is solely the product of the integration of market and reliability functions under the

CAISO, and is thus a new service appropriately charged to load served by Existing Contracts.

The second type of charge allocated to load with Existing Contracts (under the existing Amendment No. 60 methodology) is Must-Offer Capacity Payments for must-offer waiver denials. Must-offer waiver denials perform the same sort of back-up function as Significant Event designations. (Indeed, under the Offer of Settlement, the CAISO must evaluate a Significant Event designation after repetitive must-offer waiver denials.) The allocation of MLCC to Existing Transmission Contracts was litigated in the context of Docket ER04-835 concerning Amendment No. 60 to the ISO Tariff, and briefs on Exceptions are pending before the Commission. Under the Offer of Settlement, the outcome of that proceeding will control allocation of the Must-Offer Capacity Payments.

SWP is correct that MLCC is an energy payment, in contrast to the Must-Offer Capacity Payment.<sup>22</sup> The distinction, however, is irrelevant to the question of whether Must-Offer Capacity Payments may be allocated to load served by Existing Transmission Contracts. The issue is whether the service is a new service. It is. Both MLCC and Must-Offer Capacity Payments provide compensation for the same purpose – maintaining the availability of a Generating Unit to the CAISO for reliability needs that could not be foreseen in RMR and

---

<sup>22</sup> The CAISO made this distinction in its briefs in the Amendment No. 60 proceeding, as cited by SWP at 13-14, in order to explain why MLCC paid when a unit is denied a must-offer waiver in order to ensure its availability to provide Ancillary Services are not duplicative of the capacity payments it will receive if (and only if) it successfully bids into the Ancillary Services markets. While the distinction is irrelevant to allocation, as discussed in the text, the capacity payments could overlap with capacity payments from the Ancillary Services market. This potential overlap, however, is addressed by the non-spin portion of the PER adjustment. The discussion of duplicative payments in section II.D, *supra*, is applicable here.

Resource Adequacy planning. The exact same decision that gives rise to the incurrence of MLCC will give rise to the incurrence of a daily Must-Offer Capacity Payment. Under these circumstances, it would be patently illogical to allocate MLCC one way and the daily capacity payment some different way.

Judge Young's discussion in the Initial Decision of the Amendment No. 60 proceeding of the distinction between new and existing services with regard to MLCC illustrates that the same considerations apply to capacity payments as MLCC:

I accept for argument's sake SWP's contention that the Commission previously has prohibited ISO from charging congestion charges of any kind to ETCs except in circumstances involving contract conversion/termination. I nevertheless reject SWP's contention that this prohibition exempts ETCs from MLCC cost allocation. Inter-zonal congestion charges are functionally distinct from MLCC. Congestion charges are based on grid usage; MLCC costs are incurred to ensure grid reliability. ETC schedules are exempted from usage charges because the contracts grant firm rights to schedule transactions without paying any additional congestion charges. Dissimilarly, MLCC costs are not based on usage. They are based on a functionally distinct need to ensure grid reliability in anticipation of potential real-time congestion. [Must-Offer Waiver Denials ("MOWDs")] provide an *extra-contractual* benefit to ETC holders because MOWDs substantially reduce the potential for curtailment—a benefit which the contracts themselves do not provide.

*California Independent System Operator Corp.*, 113 FERC ¶ 63,017 at P 106 (2005). These distinctions are equally applicable to direct capacity payments. SWP has challenged Judge Young's findings in its Brief on Exceptions based on the reasoning of Opinion No. 459. Under the Offer of Settlement, the allocation of Must-Offer Capacity Payments to Existing Transmission Contracts will be determined by whether or not the Commission accepts SWP's arguments in the Amendment No. 60 proceeding.

## **G. Metered Subsystems**

SVP raises many of the same issues regarding Metered Subsystems that it raised in its initial objections to the Offer of Settlement. The CAISO responded to each of these issues in its May 1 Reply Comments. Because SVP raises no new issues and does not address the CAISO's response, the CAISO must repeat that response here.

SVP objects to the allocation of RCST costs to load-following Metered Subsystems because they are obligated under Section 23 of the ISO Tariff "to provide adequate resources to ensure that the load-following [Metered Subsystems] shoulder all their appropriate burdens regarding system reliability." SVP at 5. To the extent that SVP is concerned with the costs of Local RCST, that concern is mooted by the Settling Parties' request that the Commission direct the removal from the Offer of Settlement of authority to designate RCST for local reliability in 2006.

SVP's objections with regard to System RCST (or 2007 Local RCST) are unfounded. Section 4.9 of the currently effective ISO Tariff (which replaced former section 23 governing the CAISO relation with Metered Subsystems) actually imposes no resource adequacy requirements on Metered Subsystems, but merely reporting requirements about resources. SVP is correct that its MSS Agreement imposes penalties for scheduling deviations outside of a prescribed range. An MSS is also able to avoid certain payments for reliability programs if it has secured capacity that is at least 115% of its peak Demand. The RCST program, however, is designed to ensure that the CAISO has sufficient capacity

to address System contingencies that would affect all users in the Control Area, including SVP or Local contingencies. As long as SVP contributes to reliability by complying with any Resource Adequacy requirements established by its own Local Regulatory Authority, it will not be subject to any costs for RCST. To the extent it fails to do so, it is only reasonable that it bear the costs of the CAISO's backstop procurement.

SVP, based on its MSS Agreement, contends that it should not be allocated MLCC, Emissions costs, and Start-Up costs. SVP at 7. The Offer of Settlement, however, allocates MLCC, Emissions Costs, and Start-Up Costs for RCST capacity in the same manner as those costs are allocated for Resource Adequacy capacity under the Interim Reliability Requirements Program. Neither the Offer of Settlement nor the Interim Reliability Requirements Tariff purports to modify the responsibility of Metered Subsystems for MLCC, Emissions Costs, and Start-Up Costs as provided in the Sections 13.10 (including subsections) of the Anaheim, NCPA, SVP and Vernon, MSS and MSSA Agreements. Under those provisions, Metered Subsystems pay such costs on a net basis unless they seek similar compensation for their units.

#### **H. SWP as an RA Entity**

SWP objects to its status under the *pro forma* tariff provisions as an RA Entity by virtue of its inclusion in the definition of LSE in Section 40.1 of the ISO Tariff. It asserts that it is factually incorrect to deem it an LSE, that the Settling Parties' failure to address SWP's prior arguments in this regard in their August 21 Response leaves them unopposed, and that SWP must, therefore, be removed

from the definition of RA Entity. SWP at 6. The Commission, however, has already rejected SWP's arguments that it is not an LSE in Docket No. ER06-723 (see *California Independent System Operator Corp.*, 115 FERC ¶ 61,172, P 42 (2006)), although SWP is seeking rehearing. Moreover, the Commission did not include this issue among those that the Settling Parties were to address. Finally, the CAISO did address this issue in its May 1 Reply comments – which SWP even quotes. As the CAISO noted there, despite the inclusion of SWP among RA Entities, SWP will not have any allocation of RCST costs. SWP's argument is thus much ado about nothing. Its inclusion as an RA Entity will be determined by the outcome of its rehearing request in Docket No. ER06-723.

**V. NCPA'S COMMENTS ON THE OFFER OF SETTLEMENT ARE MISPLACED**

**A. NCPA Has Misrepresented the Issues Raised in Parties' Requests for Rehearing and Clarification of the Commission's July 20 Order.**

NCPA claims that certain filings since issuance of the Commission's July 20 Order cast doubt on whether there is agreement on what the Offer of Settlement means. NCPA at 4-6. It does not take more than a brief glance at the statements from these filings that NCPA relies on to realize that there is no factual basis for NCPA's claim. The statements that NCPA relies on seek clarification of language contained in the Commission's Order (specifically they seek clarification as to what the Commission intended in the Order); the statements in no way pertain to what language in the Offer of Settlement means or suggest that there is disagreement as to what the language in the settlement

means. Rather than raising any real issues about the justness and reasonableness of the filing, NCPA is creating straw men, perhaps to obfuscate matters. The Commission should not be misled.

As support for its claim that there is no agreement on the meaning of the Offer of Settlement, NCPA points to the CAISO's August 1, 2006 request for rehearing and clarification in which the CAISO sought clarification from the Commission as to what rates and terms and conditions of the Offer of Settlement the Commission had authorized in its July 20 Order. The CAISO did not express any confusion, or ask for any clarification, about the Offer of Settlement. Rather, the CAISO simply sought clarification from the Commission as to what *the Commission* intended in the order.

NCPA also relies on a clarification request filed by Powerex and a rehearing request filed by the Six Cities. Neither, of course, is a Settling Party and neither can cast doubt on the Settling Parties' continued agreement to the Settlement. Even so, as NCPA's own pleading indicates, Powerex solely sought clarification from the Commission regarding how "the Commission envisioned proof as to the validity of the 2006 LARN Study on which the cost of RCST Capacity was based."<sup>23</sup> NCPA at 5. This request clearly pertains to what the Commission intended in its order, not what the Settling Parties agreed to in the Offer of Settlement. Similarly, the Six Cities rehearing request pertained to the Commission's actions in the July 20 Order, not to the meaning of the Offer of

---

<sup>23</sup> In any event, as discussed in the next section, because there will not be any 2006 Local RCST Designations, those provisions of the Offer of Settlement are moot and the 2006 LARN Study will not be used for purposes of determining RCST designations or allocations to LSEs.

Settlement. Six Cities alleged that the Commission erred in its July 20 Order in authorizing sellers of Eligible Capacity to collect the Offer of Settlement rates from July 20.

Finally, NCPA refers to the August 21, 2006 clarification and rehearing request filed by the CPUC and the three California Investor Owned Utilities ('Joint Parties'). The Joint Parties' statement in their filing "[t]hat the July Order does not expressly state which of the many terms of the Offer of Settlement . . . are binding on the parties" indicates, again, that the clarification request pertains to the intent of the Commission's order, not the meaning of the Offer of Settlement. Moreover, the Joint Parties rehearing request regarding the finding that the current must-offer compensation is just and reasonable has no bearing on the settlement. If parties did not enter settlements while continuing to disagree with opposing parties' allegations, there would rarely be a settlement. Joint Parties are quite properly maintaining their litigation position in case the Settlement is rejected or changed in a manner they find unacceptable.

**B. NCPA's Comments That Pertain to 2006 Local RCST Designations Are Moot.**

NCPA continues to raise objections to elements that are no longer part of the Offer of Settlement and/or otherwise addressing issues that have not been set for "paper hearing" in the Commission's July 20, 2006 Order. First, NCPA claims that, under the Offer of Settlement, PG&E is getting a capacity credit, at the expense of NCPA, for NCPA's RMR generation for which PG&E pays the costs. NCPA at 11. Stated differently, NCPA claims that PG&E is being allocated the full capacity of NCPA's RMR units under the Offer of Settlement,

*i.e.*, the effect of the Offer of Settlement is to take NCPA's resources and convert (allocate) them to PG&E. *Id.* at 12. Second, NCPA raises several objections to the CAISO's 2006 LARN Study and revised LARN Study and claims that such studies "which underlie the issues here are simply wrong." *Id.* at 13. NCPA also suggests that use of the Revised 2006 LARN Study might have a significant financial impact on NCPA. *Id.*

The aforementioned arguments pertain to matters that are no longer at issue in this proceeding, and as such, are moot. On April 28, 2006, the Settling Parties filed Joint Reply Comments indicating that, based on the information provided to the CAISO, there would be no forward Local RCST Designations under the Offer of Settlement for 2006 (and, as such, no cost allocation associated with such designation). Accordingly, the Settling Parties requested that the Commission's approval of the Offer of Settlement be conditioned upon removal of the Offer of Settlement provisions related to the 2006 local capacity designation. In its May 1 Reply Comments, the CAISO indicated that, because there would not be any 2006 Local RCST Designations, NCPA's arguments and concerns regarding the criteria used in the 2006 LARN Study and the crediting of NCPA's RMR capacity against the local area requirements of the entities who were actually paying the RMR rates for such capacity were moot. NCPA continues to pursue these issues even though they are moot.

NCPA notes that the Settling Parties' August 21 Response did not address either the NCPA RMR allocation issue or the NCPA's arguments regarding the 2006 LARN Study. NCPA at 7. The reason the Settling Parties'

August 21 Response did not address the “allocation” of RMR resources or the validity of the 2006 LARN Study and its impact on cost allocation is because, as indicated in prior pleadings, there are no 2006 Local RCST Designations and the specific issues raised by NCPA pertain to 2006 Local RCST Designations.<sup>24</sup> In other words, the issues raised by NCPA are moot. There will be no crediting of RMR resources under the Offer of Settlement, and the 2006 LARN Study will not be applied. NCPA continues to ignore the fact that there are no 2006 Local RCST Designations and continues to pursue two issues that are moot.

Under the Offer of Settlement, for 2007, the Local RCST Designations will be based on local requirements, if any, established by (1) the CPUC for entities subject to its jurisdiction, and (2) Local Regulatory Authorities for municipal utilities subject to their jurisdiction. The CAISO can make Local RCST Designations for 2007 only if an entity is deficient in meeting the local requirements, if any, established by either the CPUC or a LRA, whichever is

---

<sup>24</sup> Article 2 of the Offer of Settlement pertained to the 2006 Local RCST Designation Process. However, because there will not be any 2006 Local RCST Designations, the provisions of Article 2 have become moot and will not be implemented. Indeed, the Settling Parties requested that Commission approval of the Offer of Settlement be conditioned on withdrawal of these provisions. Article 2.2.2(b) of the Offer of Settlement and Section 43.2.1.2 of the *pro forma* tariff language addressed the crediting of RMR resources to LSEs for purposes of meeting their allocated percentage of LARN. Because there will not be any 2006 Local RCST Designations pursuant to Article 2 of the Offer of Settlement, there is no need for RMR crediting in accordance with Article 2.2.2 of the Offer of Settlement. As indicated in Section 2.2(c) of the Offer of Settlement, the 2006 LARN Report identified each Local Reliability Area and provided the amount of generation needed for each local area to comply with Applicable Reliability Criteria. Section 2.2.2(a) of the Offer of Settlement provided that the CAISO would use an RA Entity’s 2005 actual coincident peak Load in each TAC Area to determine each RA Entity’s percentage of annual coincident Load in the TAC area. The CAISO would then apply the resulting percentage to the LARN identified in the 2006 LARN Report for the respective TAC Area to determine the proportionate share of responsibility for the LARN in that TAC Area for each Scheduling Coordinator for an RA Entity. Because there will not be any 2006 Local RCST Designations, there will not be any need for the CAISO to use the 2006 LARN Report to determine the total requirements in each local area or to allocate cost and generation responsibility to LSEs. Thus, NCPA’s concerns are moot.

applicable to the specific LSE. Thus, for 2007, a municipal utility would potentially be subject to local RCST costs only if its respective LRA sets specific local capacity requirements for 2007 and the municipal utility is deficient in meeting such local capacity requirements established by the LRA. Article 2.2.4 of the Offer of Settlement – the section that pertains to Local RCST Designations for 2007 – does not contain the RMR crediting provisions or the LARN Study provisions found in Articles 2.2.3 and 2.2.4, *i.e.*, the sections that pertain to 2006 Local RCST Designations. Thus, under the Offer of Settlement, the CAISO's LARN Study will not be used to determine local area requirements for NCPA in 2007 (or 2006).

**VI. THE SIX CITIES' MOTION FOR SUMMARY REJECTION OF THE OFFER OF SETTLEMENT LACKS ANY BASIS AND SHOULD BE DENIED**

In addition to filing responsive comments on the Offer of Settlement, the Six Cities filed a Motion for Summary Rejection of the Offer of Settlement. The Six Cities allege that the Settling Parties' August 21 Response

consisted of conclusory allegations that the proposed Offer of Settlement is just and reasonable; little, if any, new or additional evidence was proffered beyond what had already been filed by the Settling Parties in the settlement package itself and in their subsequent comments.

Six Cities Motion for Summary Rejection at 3. The Six Cities go on to state that the Settling Parties' August 21 Response

provides little or no new evidence, and, beyond the Settling Parties' perfunctory attempt at responding to the questions posed by the Commission in the July 20<sup>th</sup> Order, the Settling Parties made no effort to respond to any of the concerns previously raised in comments by the non-settling parties to this proceeding.

*Id.* at 4. On page 5 of their filing, the Six Cities state again that the Settling Parties' August 21 Response "essentially repeats their prior, inadequate filings and includes little or no new information." The Six Cities also claim that the Settling Parties' August 21 Response did not comply with the June 20 Order and that the Settling Parties did not respond to **any** of the issues identified by the non-settling parties in their April 20 reply comments. For example, the Six Cities state that the Settling Parties have not explained why the proposed capacity payment is based on costs associated with new generators as opposed to existing generators. *Id.* at 5.

The Six Cities' motion lacks a basis in fact or law and should be rejected. It does not take more than a brief review of the Settling Parties' August 21 Response to recognize that Settling Parties have submitted significantly more justification and information in support of the Offer of Settlement than was previously filed. Further, the Settling Parties have clearly complied with the Commission's Order. With respect to providing new support for the level of RCST capacity payment, 95% availability, and 10,500 MMBtu heat rate, the Settling Parties, *inter alia*, submitted the following: (1) the affidavit of A. Joseph Cavicchi; (2) five cost studies showing the costs of a frame combustion turbine; (3) NERC GADS data showing the expected availability of a frame combustion turbine; and (4) data from the *Gas Turbine World 2006 Handbook* showing the heat rates for frame CTs. This information constitutes hundreds of pages of new supporting materials that were not included in the reply comments previously submitted by the Settling Parties on May 1, 2006. Under these circumstances, it

is not accurate for the Six Cities to claim that hardly any new information was submitted in support of the Offer of Settlement. Indeed, the CAISO notes that nowhere in the Six Cities' Responsive Comments do the Six Cities even acknowledge or attempt to refute the affidavit of Mr. Cavicchi, the cost studies submitted by the Settling Parties, the stated rationale for using the costs of a frame combustion turbine for setting the capacity price, or new evidence regarding the proposed availability factor and heat rate. The Six Cities cannot choose to ignore the evidence submitted by the Settling Parties in their August 21 Response and then argue that no such evidence was submitted.

The Six Cities' claim appears to be based in large part on the incorrect assumption that a \$73/KW-year capacity payment reflects the cost of new generation. Six Cities Motion at 5. The proposed \$73/KW-year target capacity payment reflects a negotiated compromise amount that was agreed to by the vast majority of suppliers, the vast majority of load that will be paying the rates proposed in the settlement, and the CPUC which has jurisdiction over such load. The negotiated compromise number is not based on any specific cost study, Commission decision on capacity prices in other ISO/RTO markets, or costs of new or existing units. As discussed *supra* in Section II.C, the capacity price can be justified on any number of grounds.<sup>25</sup> In particular, as discussed earlier, and contrary to the Six Cities' claims, the proposed target capacity payment amount does not reflect the cost of new capacity; it is lower than the cost of new capacity.

---

<sup>25</sup> As the CAISO indicated in its May 1 Reply Comments, "the \$73/kW-year RCST capacity payment is supportable whether the Commission determines that the payment should be based on the costs of building a new unit or be within the range of the fixed costs of existing units." CAISO May 1 Reply Comments at 28 (footnote omitted).

The Settling Parties also submitted additional support for the revised AMP price screen, FMA provision, and treatment of cost-based A/S bids of Condition 2 RMR units. For example, with respect to the AMP price screen, the Settling Parties added discussion regarding the underlying basis for the existing price screen and how circumstances have changed since the time the existing price screen was adopted. The Settling Parties also included a discussion about increased gas prices and how that fact justifies a higher AMP price screen and makes the current level of the price screen unjust and unreasonable.

With respect to the frequently mitigated unit bid adder, the Settling Parties responded to the Commission's order by including four pages of discussion of why the mechanism is needed to ensure just and reasonable compensation for the reliability services that units subject to the must-offer obligation provide.<sup>26</sup> In particular, the Settling Parties included new discussion explaining how the FMA is essentially a surrogate for a capacity payment for units that the CAISO needs for reliability but are which are not fully contracted. The Settling Parties also offered justification for the level of the bid adder, noting, *inter alia*, that the Commission had approved a \$40 bid adder for PJM and that there were numerous limitations on the accrual of bid adder amounts and on the triggering of the bid adder mechanism. The Settling Parties also described how the FMA was consistent with the overall compensation scheme of the Offer of Settlement.

The Settling Parties also complied with the Commission's directive to fully explain and document the reasonableness of the proposed cost allocation.

---

<sup>26</sup> By contrast, the CAISO's May 1 Reply Comments spent less than a page addressing this issue.

Specifically, the Settling Parties explained the cost allocation proposals pertaining to Significant Event RCST designations, System RCST Designations, Must-Offer Capacity Payments, and FMAs, and discuss why such proposals are reasonable. As discussed above, there are few, if any, factual issues relevant to allocation. Matters cited by Six Cities in their Comments, such as the historical reasons for Summer 2006 must-offer waiver denials, do not bear on the proposed allocations. Although the Six Cities may disagree with some of the allocation proposals in the Offer of Settlement, they do not provide any specifics as to how the Settling Parties failed to explain and offer justifications for such proposals.

With respect to allocation of costs associated with System RCST Designations, the Settling Parties' August 21 Response included discussion of how the proposed allocation is consistent with cost causation principles because it imposes the costs of RCST designations on those LSEs that are deficient in their RA showings, and hence responsible for the CAISO's incurrence of RCST costs. The Settling Parties' August 21 Response also included "new" discussion of how the proposed allocation methodology will incent LSEs to comply with RA requirements and how RCST capacity designated by the CAISO will count toward an LSE's Month-Ahead System RA demonstration obligations for the term of the RCST designation. The latter discussion addressed the Six Cities' concern raised in their April 20 Reply comments (raised again in the September 11 comments and discussed above in Section IV.E) that a three-month RCST designation term could result in the first deficient LSE bearing three months'

RCST costs, but LSEs who are deficient in the next two months not bearing any RCST costs.

With respect to the allocation of Must-Offer Capacity Payment costs, the Settling Parties made it clear that they were not advocating a specific methodology but were proposing to allocate the capacity payments in the same manner as MLCC.<sup>27</sup> The relevant evidence is already before the Commission in the proceedings on Amendment No. 60 to the ISO Tariff. The Settling Parties' August 21 Response included "new" discussion as to why it was appropriate to allocate the must-offer capacity costs in the same manner as MLCC. In particular, the Settling Parties pointed out how the same actions that give rise to the incurrence of MLCC will give rise to Must-Offer Capacity Payments.

The Settling Parties' August 21 Response also included an explanation of the proposed methodology for allocating the costs of Significant Event RCST designations and an explanation of why such proposed methodology was just and reasonable.<sup>28</sup> This was all "new" discussion.

The Settling Parties' August 21 Response also explained why the proposed methodology for allocating FMA bid adder costs is just and reasonable. In particular, Settling Parties pointed out that FMA costs are in fact costs of managing Intra-Zonal Congestion, and should be allocated in the same manner

---

<sup>27</sup> The Offer of Settlement proposes that Must-Offer Capacity Payments be allocated in accordance with the Commission's decision in the Amendment No. 60 proceeding, *i.e.*, Docket No. ER05-835.

<sup>28</sup> The Settling Parties' August 21 Response included a discussion of why the costs of Significant Event designations should be allocated in accordance with FERC Opinion No. 459 and why such costs should be allocated to Existing Contract holders. The Settling Parties also distinguished Significant Event RCST designation costs from RMR costs and discussed why they should not be allocated in the same manner as RMR costs. Again, this was all new discussion.

as the associated, underlying out-of-merit-order bids that are incurred by the CAISO in the management of Intra-Zonal congestion. This was “new” discussion not previously contained in any of the Settling Parties’ reply comments filed on May 1, 2006 because no intervenor objected to the proposal in their comments filed on April 20, 2006. Further, the Six Cities do not raise any objections to this allocation methodology in their September 11 Comments.

Thus, as the aforementioned discussion readily indicates, the Settling Parties submitted a significant amount of “new” explanations and support for the Offer of Settlement in their Response filed on August 21, 2006.

The Six Cities also claim that “Settling Parties did not respond to any of the issues identified by non-settling parties” in their April 20 reply comments on the Offer of Settlement, and that this somehow necessitates rejection of the Offer of Settlement. Six Cities at 5. As an initial matter, in the July 20 Order, the Commission specified three issues on which it was seeking a response from the Settling Parties. In setting out these three issues, the Commission basically requested that the Settling Parties provide further explanation of and support for their proposals. The Settling Parties clearly complied with that directive, and the incorrect claims of the Six Cities do not show otherwise. Although the Six Cities ignore the additional support and explanation provided by the Settling Parties, the Commission cannot. Importantly, the Commission did not direct the Settling Parties to reply to the comments submitted and/or issues raised by other parties in their April 20, 2006 submission. Rather, the procedural schedule established by the Commission in the July 20 Order set a date for the Settling Parties to

submit Reply Comments addressing the issues raised by other parties in their comments on the Settling Parties' August 21 Response. Thus, there was no requirement in the July 20 Order that the Settling Parties, in their August 21 Response, address all of the issues raised by other parties back in April.

In any event, in their August 21, 2006 response, the Settling Parties did address many of the specific issues identified by non-settling parties, including the Six Cities, in their April 20 comments, and in some cases the non-settling parties have not attempted to rebut that evidence. In their previous comments on the Offer of Settlement filed on April 20, 2006, the Six Cities raised specific objections that the 10,500 BTU/kWh heat rate was unreasonably high (April 20 Comments at 16) and that the 95% availability factor was too lenient (April 20 Comments at 19-20), yet in their Comments filed on September 11, 2006, the Six Cities did not raise any specific objections to these provisions of the Offer of Settlement. In another instance, although the Six Cities argued in their reply comments filed on April 20, 2006, that the Settling Parties did not explain the increase in the AMP price screen (Six Cities at 22), in their September 11 Comments, the Six Cities do not raise any objections to the revised AMP price screen proposal.<sup>29</sup> Further, although the Six Cities objected to the level of the frequently mitigated unit bid adder in their April 20 reply comments (at 18-19), the Six Cities do not state any specific objections to the proposal in their September 11 Comments. Indeed, in their September 11 Comments, the Six Cities do not

---

<sup>29</sup> Further, the Six Cities do not address any of the evidence submitted in the Settling Parties' August 21 Response regarding the revised AMP screen proposal.

address or acknowledge the evidence submitted by the Settling Parties on the FMA.

In summary, the Six Cities fail to acknowledge, let alone attempt to refute, the vast majority of the evidence submitted by the Settling Parties. Instead, they incorrectly claim that little, if any, support was even provided for the proposals. For the reasons discussed herein and in the Settling Parties' August 21 Response, the Commission should approve the Offer of Settlement as a package that is just and reasonable as a whole and reject the Six Cities' motion to dismiss.

Respectfully submitted,

**EXHIBIT A**

**UNITED STATES OF AMERICA  
BEFORE THE  
FEDERAL ENERGY REGULATORY COMMISSION**

Independent Energy Producers	)	
Association,	)	
	)	
Complainant	)	
v.	)	Docket No. EL05-146-000
California Independent System	)	
Operator Corporation,	)	
	)	
Respondent	)	

**DECLARATION OF MARK ROTHLEDER  
ON BEHALF OF  
THE CALIFORNIA INDEPENDENT SYSTEM OPERATOR CORPORATION**

1. My name is Mark A. Rothleder. I hold the title of Principal Market Developer for the California Independent System Operator Corporation (“CAISO”). I have held this position since Summer 2005. As Principal Market Developer, I generally play a lead role in the design and implementation of market rules and operating procedures for the CAISO and I acted as the lead negotiator for the CAISO in the above-referenced proceeding. I also played the lead in designing the CAISO’s proposed changes to its Tariff, filed in *California Independent System Operator Corporation*, FERC Docket No. ER06-723-000 (March 13, 2006), to implement its Interim Reliability Requirements Program (“IRRP”), as well as the Resource Adequacy related provisions of its February 9, 2006, Market Redesign and Technology Upgrade Tariff filing before this Commission (*California Independent System Operator Corporation*,

FERC Docket No. ER06-615-000, February 9, 2006). Prior to my current position, I held the position of Director of Market Operations for the CAISO.

2. The purpose of my declaration is to provide information related to the a) fixed costs of non-hydroelectric RMR generation in the CAISO Control Area, b) previously overestimated Must-Offer Capacity costs, c) Must-Offer waiver denials, and d) exposure under the Frequently Mitigated Adder.
3. Due to the ineligibility of hydroelectric units for RCST designation, and the fact that hydroelectric units are not subject to the Must Offer Obligation -- and hence, are not eligible to receive a RCST capacity payment or a Must Offer capacity payment under the Offer of Settlement -- I have recalculated the range and average of the fixed costs of current RMR Units by excluding hydroelectric units. Based on the available data for non-hydroelectric RMR Units for 2006, I have determined that the weighted average Annual Fixed Revenue Requirements (“AFRR”) for 2006 non-hydroelectric RMR Generation in the CAISO Control Area is \$64.1/kW-yr.
4. To perform this analysis, the CAISO compiled the AFRR for 2006 non-hydroelectric RMR resources from publicly available data filed with the Commission.
5. By dividing the identified AFRR by capacity and converting it to kW-yr, I determined the RMR fixed cost for each unit. I summed the total megawatts of RMR capacity and the total fixed costs. From those calculations, I derived the weighted average AFRR of non-hydroelectric RMR Generation in the CAISO Control Area is \$64.1/kW-yr.
6. I am also providing information related to Must-Offer waiver denials. Specifically, the CAISO had previously published a preliminary report on its website, that

estimated daily capacity related to Must-Offer waiver denials totaling \$21 million for the period of June 1, 2006 through August 31, 2006. This estimate did not take into account the actual Market Clearing Prices that occurred during this for the period of June 1, 2006 through August 31, 2006. I have reevaluated the RCST daily capacity payment costs reflecting the maximum monthly RCST payment allowed, reduced by Peak Energy Rent (“PER”) based on actual market prices, instead of the previously estimated PER. The monthly PER and supporting data for calculating each TAC Area are provided in Exhibit 1.

7. During the period of June 2006 through August 2006, I have determined, using a PER based on actual market prices, that daily Must Offer capacity costs for FERC Must Offer Generators totaled approximately \$6.8 million.
8. With regard to Must-Offer waiver denials, I have calculated the total number of resources that were denied a Must-Offer waiver denial for the period of June 2005 through August 2005 was 434 unit-days. Of these, I have determined that the number of Must-Offer waiver denials made in the Day-Ahead timeframe for the June 2005 through August 2005 period from resources that were not designated as Resource Adequacy or Reliability Must-Run in 2006, totaled 160 unit-days. Comparatively, for the period of June 2006 through August 2006, the total number of non-Resource Adequacy and non-Reliability Must-Run resource waiver denials in the Day-Ahead timeframe amounted to 141 unit-days.
9. Furthermore, I have reviewed my calculations submitted in my May 1, 2006 Declaration, and have concluded that the total 2005 Must-Offer waiver denials from non-Resource Adequacy resources was incorrect. I previously determined that only

218 unit-days involved units that will be FERC Must-Offer resources, and eligible for the additional capacity payment in 2006. I recognize now, however, that two units were incorrectly excluded. Of the 1287 unit-days of Must-Offer waiver denials during 2005, 353 unit-days involved units that will be FERC Must-Offer resources since June 2006.

10. The next area I am providing information on relates to the Frequently Mitigated Adder ("FMA") Exposure. Using the CAISO market data as the source, I have analyzed all instances of Local Market Power Mitigation applied to resources for the period June through August 2006.
11. For that period, I have calculated a total of 1585 MWh of Energy mitigated using the CAISO's local market power mitigation measures. Of this energy, only 91 Mwh would be eligible for the FMA because the resource was mitigated more than 5 intervals in one day and was not a Resource Adequacy or RMR unit. Specifically, the 91 Mwh eligible for FMA would result in \$3,525 of adder compensation based on a \$40 adder limited by the resource's original bid.

I declare under penalty of perjury that the foregoing is true to the best of my knowledge.

Executed this 26<sup>th</sup> day of September, 2006.

  
Mark A. Rothleder

## RCST Rates and Payn

**nents**

**Preliminary FERC-MOO<sup>1</sup>  
Must-Offer Waiver Denial Summary Report**

In support of the terms of the RCST Settlement (EL05-146-000), the CAISO is providing this preliminary report of waiver denial activity for FERC-MOO resources. The preliminary analysis and data provided (aggregate costs and quantities) are for information purposes only, and are subject to change.

**1. Monthly FERC-MOO Waiver Denials and Estimated Capacity Costs by local, system or zonal reasons**

- a. Table 1 provides number of unit-days and estimated capacity costs associated with denying a waiver to a FERC-MOO resource for the month of June 2006

Table 1: FERC-MOO Waiver Denials for June 2006

TAC/Service Area	Description	Local	System	Zonal	Total
Northern (PG&E)	FERC-MOO Waiver Denials (Unit-Days)	6	7	0	13
	Estimated Minimum Load Costs	\$ 1,113,958	\$ 810,036	\$ -	\$ 1,923,994
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ 448,074	\$ 678,562	\$ -	\$ 1,126,636
East Central (SCE)	FERC-MOO Waiver Denials (Unit-Days)	0	11	11	22
	Estimated Minimum Load Costs	\$ -	\$ 1,088,287	\$ 1,710,629	\$ 2,662,301
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ -	\$ 1,146,462	\$ 1,733,310	\$ 2,879,772
Southern (SDG&E)	FERC-MOO Waiver Denials (Unit-Days)	0	0	0	0
	Estimated Minimum Load Costs	\$ -	\$ -	\$ -	\$ -
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ -	\$ -	\$ -	\$ -
Total	FERC-MOO Waiver Denials (Unit-Days)	6	18	11	35
	Estimated Minimum Load Costs	\$ 1,113,958	\$ 1,898,324	\$ 1,574,013	\$ 4,586,294
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ 448,074	\$ 1,825,024	\$ 1,733,310	\$ 4,006,408

- b. Table 2 provides number of unit-days and estimated capacity costs associated with denying a waiver to a FERC-MOO resource for the month of July 2006

Table 2: FERC-MOO Waiver Denials for July 2006

TAC/Service Area	Description	Local	System	Zonal	Total
Northern (PG&E)	FERC-MOO Waiver Denials (Unit-Days)	0	25	0	25
	Estimated Minimum Load Costs	\$ -	\$ 3,086,971	\$ -	\$ 3,086,971
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ -	\$ 4,168,919	\$ -	\$ 4,168,919
East Central (SCE)	FERC-MOO Waiver Denials (Unit-Days)	2	4	63	69
	Estimated Minimum Load Costs	\$ 246,590	\$ 792,660	\$ 6,546,822	\$ 7,586,073
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ 118,732	\$ -	\$ 11,337,783	\$ 11,456,515
Southern (SDG&E)	FERC-MOO Waiver Denials (Unit-Days)	0	0	0	0
	Estimated Minimum Load Costs	\$ -	\$ -	\$ -	\$ -
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ -	\$ -	\$ -	\$ -
Total	FERC-MOO Waiver Denials (Unit-Days)	2	29	63	94
	Estimated Minimum Load Costs	\$ 246,590	\$ 3,879,631	\$ 6,546,822	\$ 10,673,043
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ 118,732	\$ 4,168,919	\$ 11,337,783	\$ 15,625,434

<sup>1</sup> FERC-MOO resources are resources that are not designated as RA resource or are not under an RMR contract.

<sup>2</sup> Based on 1/17<sup>th</sup> of the estimated annual capacity \$73/kw-yr and applying a monthly shaping factor for SP15 resources in June of 8.3%, July of 15.8% and August of 17.5% and for NP15/ZP26 resources in June of 5.1%, July of 13.7% and August 15.3% per RCST Offer of Settlement. For the purposes of this analysis capacity costs are limited when total daily capacity costs plus imbalance costs for minimum load energy (frequently mitigated adder costs not considered in this analysis) for the month exceeds the estimated Monthly RCST Charge reduced by PER (estimate based on an annual capacity cost (reduced by PER) = \$40/kw-yr). Actual costs are subject to final FERC approval.

- c. Table 3 provides number of unit-days and estimated capacity costs associated with denying a waiver to a FERC-MOO resource for the month of August 2006

Table 3: FERC-MOO Waiver Denials for August 2006

TAC/Service Area	Description	Local	System	Zonal	Total
Northern (PG&E)	FERC-MOO Waiver Denials (Unit-Days)	0	1	0	1
	Estimated Minimum Load Costs	\$ -	\$ 58,842	\$ -	\$ 58,842
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ -	\$ 129,155	\$ -	\$ 129,155
East Central (SCE)	FERC-MOO Waiver Denials (Unit-Days)	6	2	3	11
	Estimated Minimum Load Costs	\$ 921,224	\$ 95,373	\$ 227,989	\$ 1,244,586
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ 962,601	\$ 192,489	\$ 801,530	\$ 1,956,621
Southern (SDG&E)	FERC-MOO Waiver Denials (Unit-Days)	0	0	0	0
	Estimated Minimum Load Costs	\$ -	\$ -	\$ -	\$ -
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ -	\$ -	\$ -	\$ -
Total	FERC-MOO Waiver Denials (Unit-Days)	6	3	3	12
	Estimated Minimum Load Costs	\$ 921,224	\$ 154,214	\$ 227,989	\$ 1,303,427
	Estimated FERC-MOO Capacity Costs <sup>2</sup>	\$ 962,601	\$ 321,644	\$ 801,530	\$ 2,085,776

## 2. Multiple Denials of Waiver for FERC-MOO Resources

From June 1, 2006 thru August 31, 2006 there have been 10 FERC-MOO resources that have been denied a Must-Offer waiver in the Day-Ahead market. Of these 10 resources, 8 resources have been denied a waiver more than 4 total days. Table 4 provides the quantity of resources denied a waiver more than 4 times for local, system, zonal or any of reasons by area.

Table 4: FERC-MOO Resources Denied a Waiver More Than Four Days By Reason (June 1- August 31, 2006)

TAC/Service Area	Local	System	Zonal	Any
Northern (PG&E)	1	2	0	2
East-Central (SCE)	1	1	6	6
Southern (SDG&E)	0	0	0	0
Total	2	3	6	8

## 3. Reasons for Waiver Denials of FERC-MOO Resources

Figure 1 provides a graphical summary of the reasons for waiver denial of FERC-MOO resources from June 1, 2006 thru August 31, 2006. Following is a more detail description of the reasons:

- a. System Capacity: Sufficient capacity is committed or available to meet all interruptible and firm load based on Day-Ahead forecasts and expected imports. Refer to procedure M-432.

<http://www.caiso.com/docs/2004/09/03/2004090313342914798.pdf>

- b. SCIT: In order to meet the East-of-River/Southern California Import Transmission Nomogram requirement sufficient resources must be online in Southern California. Refer to procedure T-103.

<http://www.caiso.com/docs/2002/01/29/2002012909363927693.pdf>

- c. SP26 Capacity: Sufficient resources are online or available to meet the WECC MORC requirements for managing pre and post-contingency loading criteria on transmission serving the region south of Path 26.
- d. Environmental: Operational restrictions established by state or federal agencies that limit or require generation to be operated in a particular way.
- e. Procedure G-217: Sufficient resources are online or available to meet pre and post-contingency operating criteria of the of the South-of-Lugo Transmission corridor.
