STATEWIDE ELECTRICAL EMERGENCY REACHES STAGE TWO

Voluntary Power Curtailment Programs Activated by State's Privately-Owned Utilities

(Folsom, CA) A pervasive heat wave covering most of California is narrowing the state's electricity operating reserves, prompting the California Independent System Operator (California ISO) to declare a Stage Two Electrical Emergency from 12:30-8 p.m. Consumer demand throughout the state today is trending nearly 1,000 megawatts higher than usage forecasts. This afternoon's forecasted peak has been revised to 44,070 megawatts.

The California ISO has asked utilities Pacific Gas and Electric, Southern California Edison and San Diego Gas and Electric to shed all of the voluntary load available, approximately 1,900 megawatts. **The ISO urges interruptible customers to wait to shed their contracted electrical load until specified to do so by their local utility.** Interruptible customers, mainly commercial and industrial users, receive a reduced rate in exchange for a commitment to come off line when asked to do so for reliability purposes.

A Stage Two Emergency is declared when operating reserves dip below five percent or are expected to within the next two hours. If an operating reserve shortfall of less than one-and-a-half percent is unavoidable, Stage Three will be initiated. Involuntary curtailments of service to customers, including "rotating blackouts," are possible during this emergency declaration. The California ISO's Electrical Emergency Plan (EEP) is part of the state's enhanced reliability

standards created by landmark legislation Assembly Bill 1890, which restructured California’s electricity industry. A Stage One Emergency, urging Californians to conserve as much energy as possible, was called at 11 a.m., and is effective through 8 p.m. this evening.

California ISO is chartered by the state to manage the flow of electricity along the long-distance, high-voltage power lines that make up the bulk of California’s transmission system. The not-for-profit public-benefit corporation assumed the responsibility in March, 1998, when California opened its energy markets to competition and the state’s investor-owned utilities turned their private transmission power lines over to the California ISO to manage. The mission of the California ISO is to safeguard the reliable delivery of electricity, facilitate markets and ensure equal access to a 12,500 circuit mile “electron highway.”

Information about the California ISO control area’s electricity supply and the current demand is available on the web at www.caiso.com.
