DRRS – Batch Submission Recommendation

- When a DRP submits a batch to DRRS, the batch status can have 4 possible values for:
 SUCCESS, ERROR, IN_PROCESS, and NOT_PROCESSED
- Once the batch is submitted, the status is set to "NOT_PROCESSED". The processor runs periodically to pick up the submitted batch jobs and start processing them by changing the status to "IN_PROCESS".
- Depending on the result of the batch validation process, the status will then change to "SUCCESS" or "ERROR".
- Please refer to Page 49 of Technical Specification document:
http://www.caiso.com/Documents/EnergyStorageandDistributionEnergyResourcePhase2-DRRS-TechnicalSpecificationsv20_Clean.pdf

DRRS – Batch Submission Recommendation

- As part of the ESDER 2 project go-live, the DRPs are required to terminate all existing registrations and submit new registrations using the new baseline methods with an effective start date of 11/01/2018.
- DRPs are required to submit these new registrations in DRRS from 10/15/18 to 10/31/18 in order to avoid any gap in registrations.
- To ensure a smooth processing of these batch files and in order to avoid over loading the DRRS application, the ISO is requesting the DRPs to follow these guidelines:
 - Limit new batch submissions to 10,000 locations per batch
 - Do not submit duplicate data sets as the system will have to process through the same information multiple times.
 - Ensure there is a delay in the submission of the batches as the batches are queued for processing.

Fall 2018 - Green House Gas Enhancements for EIM

Project Info	Details/Date
Application Software Changes	<p>The CA ISO proposes to adjust its solution to address emissions associated with secondary dispatch. CAISO will limit the GHG bid quantity of EIM participating resources to the MW value between the EIM participating resource's base schedule and the resource's upper economic limit (UEL).</p> <p>Since the GHG bid quantity is now limited, this will change the market dispatch to identify other EIM participating resources that have available capacity above their base schedule to support EIM transfers into CAISO to serve CAISO demand. The GHG emissions of these resources will now be appropriately reflected in the market attribution.</p> <p>The CA ISO decided to withdraw the two-pass solution previously proposed.</p>

Creating an annual outage reporting deadline to be aligned with the annual congestion revenue rights allocation and auction process to improve the congestion revenue rights model used in the annual process. 2. Limiting the congestion revenue right source and sink combinations that market participants can purchase in the auctions to better align the congestion revenue rights product with the purpose of hedging congestion charges associated with supply delivery in the CAISO's locational marginal price-based day-ahead market. 3. Generator Contingency & Remedial Action Scheme Modeling (cont.)

Due to the NDA restriction of the shift factor data in Market Sim, in order for CAISO to facilitate the Market Sim verification the following will occur

- GCARM scenarios will run as documented in the Market Scenario documentation.
- Settlement of the scenario will be calculated as documented in the Market Scenario documentation.
- Post Market Sim scenario execution, upon request, CAISO will provide a version of the shift factor file without market sensitive information for participants to review GFF impact from GCARM contingencies
 - <http://www.caiso.com/Pages/documentsbygroup.aspx?GroupID=35E9BD08-89AC-4D83-9921-BD024EE45596>

Structured Scenarios

- For both Day Ahead and RT scenarios, the ISO will provide a spreadsheet with information on contingencies that will be used for market simulation. The spreadsheet will provide similar data to what is currently available in the CMRI report. There will be the name of the contingency (generic e.g. GCARM_TEST_1) and equipment that can be possibly overloaded by the contingency.
 - <http://www.caiso.com/Documents/GCARMContingencySpreadsheet.xlsx>
- On the RT scenario, the ISO will take the Day Ahead awards information from the structured scenario in DA into Real Time, just like the production process, and market participants may submit bids for any resources, or for those resources that were not awarded for the DA into the Real Time

2019 Fall Release

Fall 2019 – Commitment Cost and Default Energy Bid Enhancements

Project Info	Details/Date
Application Software Changes	<p><u>Scope:</u> Enhances the ability to submit market-based commitment cost bids in order to reflect unique costs and volatility:</p> <ul style="list-style-type: none"> • Support integration of renewable resources through incentivizing flexible resources participation during tight fuel supply • Account for costs of flexible resources (gas and non-gas) to reduce risk of insufficient cost recovery • Encourage participation of non-RA and voluntary EIM resources; compliance with FERC Order 831 • Raises energy bid cap from \$1,000/MWh to \$2,000/MWh: • Requires supporting verified costs of energy bids above \$1,000/MWh • Introduces market power mitigation (MPM) measures for commitment costs. <p><u>Impacted Systems:</u></p> <ul style="list-style-type: none"> • SIBR: Incorporate negotiated default commitment bids, allow the submittal of Ex Ante cost adjustments. Increase commitment cost caps, increase energy bid caps, incorporate soft energy bid cap. Allow for hourly submittal of minimum load bids into day-ahead market. • IFM/RTM: Add MPM tests for commitment costs. Mitigate commitment costs where tests indicate market power. Incorporate MPM (both energy and commitment) in short term unit commitment process. Recalibrate the penalty price parameters in response to raising energy bid cap to \$2,000/MWh. • CMRI: Provide resource-specific reporting on mitigation results for commitment costs. Provide additional source information for default bids. • MQS/PCA: Incorporate mitigation of commitment costs for specific exceptional dispatch (ED) types. Incorporate bid locking of commitment costs for ED instructions and for certain cases where resources are uneconomic to operating. • Master File: Allow submittal of resource-specific minimum load costs for costs that are independent of the Pmin level. Add the ability to indicate preference for new negotiated cost basis type. Provide a view of resource-specific scalars used for validating Ex-Ante cost adjustments. • CIDI: Incorporate templates for submitting request for manual consultation and ex-post default bid adjustments.
