

Analysis of relevance of Counterflow RSI metric for three situations

B. Hobbs

- Gen pocket → system
- System → load pocket
- Large subsystem → large subsystem

1. What is the nature of the potential market power?
2. What is appropriate index of MP?
3. What is the relevance of the RSI counterflow metric?
4. Is the potential MP problem effectively addressed by LMPPM?
5. Recommendation

- Gen pocket → system
 - Counterflow index irrelevant, LMPM useless
- System → load pocket
 - Counterflow index relevant, LMPM effective
- Large subsystem → large subsystem
 - Counterflow index relevant, LMPM effective for import region MP
 - Not for export region MP
