ISO to host public meeting on regional energy market studies

FOLSOM, Calif. – The California Independent System Operator (ISO) is hosting a two-day public meeting on April 27 and 28 to review preliminary results of studies on the impacts of a potential regional electric grid across the western United States.

The preliminary study findings will be published Monday, April 25 on the ISO website.

The studies are required under Senate Bill 350, the Clean Energy and Pollution Reduction Act, signed into law last year. The law's main provision establishes California's goal of reaching a 50 percent renewable portfolio standard by 2030. In addition, SB 350 directs the ISO to complete studies to assess a regional grid's potential impacts to ratepayers, California's economy and workforce, the environment, disadvantaged communities, greenhouse gas emissions, and the reliability and integration of renewable energy resources.

The meeting will be from 9 a.m. to 5 p.m. Wednesday, April 27 and Thursday, April 28 at the ISO, 250 Outcropping Way, Folsom, CA. Those planning to attend in person must register by email to SMC@caiso.com by 5 p.m. Friday, April 22.

The two day conference is also available via internet at <http://ems7.intellor.com/login/704086> on April 27 and <http://ems7.intellor.com/login/703933> on April 28. Audio connection instructions will be available after connecting to the web conference.

To participate by telephone only, call 877-369-5230 followed by access code 0557075# on April 27 and access code 0487035# on April 28. Please use this dial-in method only if unable to participate by web to ensure ability to participate in the question-and-answer session-.

Stakeholder comments on the preliminary results and the meeting discussion are due by May 13. The final report is anticipated to be released in June.

Thanks for re-posting!

The California ISO provides open and non-discriminatory access to one of the largest power grids in the world. The vast network of high-voltage transmission power lines is supported by a competitive energy market and comprehensive grid planning. Partnering with about a hundred clients, the nonprofit public benefit corporation is dedicated to the continual development and reliable operation of a modern grid that operates for the benefit of consumers. Recognizing the importance of the global climate challenge, the ISO is at the forefront of integrating renewable power and advanced technologies that will help meet a sustainable energy future efficiently and cleanly.
