#### Weekly Market Performance Report

For the days between September 4, 2019, through September 17, 2019 the day-ahead market observed higher load on September 4 and 5 driven by higher temperatures in Southern California. For these two days, there was price separation between northern California and Southern California due to congestion on the Midway Whirlwind and Barre-Lewis constraints. In the Real-Time market, we observed price volatility in the real-time markets on September 4, 2019 mainly due to higher loads in Real-Time Compared to the day-ahead market. The root cause of price excursion is captured on the first tab of the report.

#### Review of the Price Correction Report

During the week of September 9-13, 2019, the ISO processed 5 intervals for price corrections due to software defect. During the week of September 16-20, 2019, the ISO processed 15 intervals for price corrections due to data input error.

#### General Reminders

- **NOTE:** The current best practice, and preferred method, of asking questions is to route through the **Customer Inquiry, Dispute and Information system, "CIDI"**.
- Please submit your questions ahead of the call; there are occasions when we have to gather information: submission ahead of time allows us more preparation time to reply.
- To add general comments/questions/requests to the **action item list or meeting agenda**, market participants should also open corresponding CIDI tickets with both the Functional Environment as "Market Performance" and SCID as "XPUB" by close of business (COB) on Mondays.
