# MPM Not Competitive constraints on Oasis

The screenshot shows the OASIS web application interface. The top navigation bar includes 'ATLAS REFERENCE', 'REPORT DEFINITION', 'PRICES', 'TRANSMISSION', 'SYSTEM DEMAND', 'ENERGY', 'ANCILLARY SERVICES', and 'CONGESTION REVENUE RIGHTS'. The 'PRICES' tab is active.

On the left, the 'Market Power Mitigation Status' report is displayed for the date 02/15/2017. It includes a table with columns for Balancing Authority Area ID, Market, Opr Date, Execution Type, and Opr Inter.

Balancing Authority Area ID	Market	Opr Date	Execution Type	Opr Inter

The main content area lists various price and constraint categories, such as 'Locational Marginal Prices', 'Scheduling Point/Tie Combination Locational Marginal Prices', and 'Intertie Constraint Shadow Prices'. A detailed table on the right shows the status of these constraints for hours HE14 through HE23.

At the bottom, there is a 'CONNECTED' status indicator and a 'QUICK LINKS' section with options like 'OASIS Home' and 'System Operating Message'. ## Key points

- Input bid from corresponding RTPD is used in RTD LMPM. It can be market bid, or mitigated in RTPD bid.
- RTPD mitigated bid can be mitigated farther in RTD.
- RTD LMPM evaluates second interval. If bids are mitigated, they will be used for binding interval of next RTD.
- Mitigated bids will be used within quarter of the hour (15 min interval corresponding to RTPD interval).  
Corresponding RTPD input bids used at the beginning of every quarter.
- EIM bids will be mitigated if EIM MCP is higher than CAISO MCP.
