

Reliability Coordinator Services

Rate Design, Terms and Conditions Straw Proposal

Comments of Tacoma Power

Company	Contact Person	Date Submitted
Tacoma Power	John Nierenberg	5/4/2018

Tacoma Power would like to thank the California ISO (CAISO) for the opportunity to comment on the document posted April 5, 2018, entitled Reliability Coordinator Rate Design, Terms, and Conditions Straw Proposal.

Tacoma Power is both a transmission operator (TOP) and a balancing authority (BA). As such, it is dedicated to ensuring it is complying with its NERC/WECC obligations and wants to work collaboratively within the Western Interconnection to ensure the functions of the Reliability Coordinator (RC) enhance and improve the reliability of the region. Tacoma Power looks to the RC to ensure the operating tools, processes and procedures necessary to have the wide area view of the bulk electric system (BES), and the knowledge to prevent or mitigate emergency operating situations. In addition, Tacoma Power would like this performed in a fair and equitable manner.

Tacoma Power has reviewed and concurs with the comments provided by Salt River Project (SRP) which was supplied to us.
