

**Energy Conservation
Tips for Winter**

- **Keep your thermostat at 68°; lower at night and when not at home**
- **Minimize power usage during peak hours of 5-9 a.m. and 4-7 p.m.**
- **Curb hot water usage**
- **Turn off lights, computers, and other electronics when not in use**

STAGE 1

Consumers are urged to reduce their use of electricity voluntarily to avoid more severe conditions.

STAGE 2

Voluntary interruption of service to select customers is required to avoid more severe conditions.

STAGE 3

Consumers are advised that rotating outages are possible.

WEDNESDAY IS DAY 23 OF STAGE THREE EMERGENCY California ISO Calls for Continued Energy Conservation

(Folsom, CA) Power reserves continue to be tight throughout the state and the western region, prompting the California Independent System Operator (California ISO) to declare tomorrow, **Wednesday, February 7th** a *Power Watch Day*.

The California ISO urges Californians to watch their energy consumption, curtailing their use of electricity whenever possible. **Increased conservation efforts during the peak usage hours of 5-9 a.m. and 4-7 p.m. would be helpful.** Wednesday's peak demand on the ISO-controlled Grid is expected to reach 31,000 megawatts at approximately 6 p.m.

Power Watch is a public awareness campaign sponsored by the California ISO to communicate the current electricity resource outlook, in light of the rising demand for power in California. By providing regular updates on system conditions and peak demand forecasts, the California ISO hopes to convey the importance of using electricity wisely on days when electricity reserves may run low.

Incorporated under California law (AB 1890), the not-for-profit California ISO is chartered by the state to manage the flow of electricity along the long-distance, high-voltage power lines that make up the bulk of California's transmission system. Following restructuring of the state's electricity industry, the California ISO's mission is to keep the open market power grid in California reliable, safe, competitive and accessible.

Information about the California ISO control area's electricity supply and the current demand is available on the web at www.caiso.com. For questions relating to the electrical distribution systems that carry electricity directly to homes and businesses, please contact your local utility.
