

#### Renewable Integration Update

Mark Rothleder
Director, Department Analysis and Development

Board of Governors Meeting General Session Aug 25-26, 2011

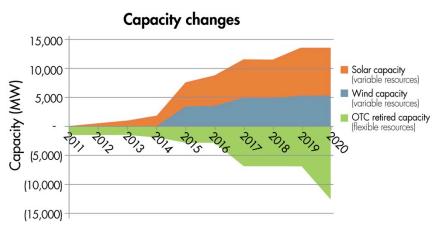

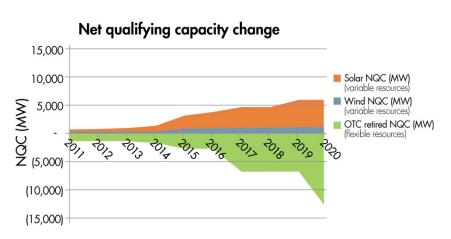

### Electricity is produced, delivered, and consumed at the speed of light while balance must be maintained.

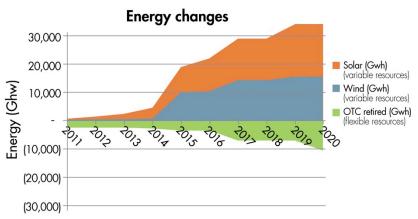

### Supply variability and uncertainty will increase while the flexible capability of the fleet is decreases

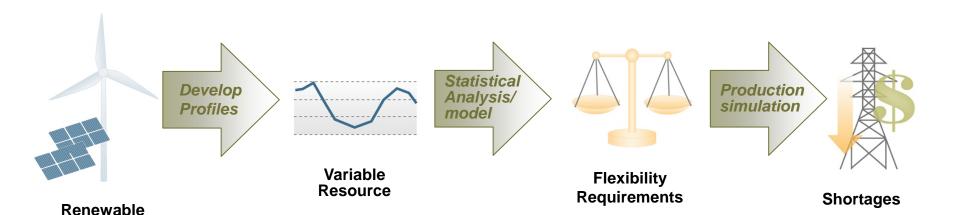

- Operational requirements for flexible capacity will approximately double due to increase of variable resources
- Approximately 15% of the fleet's flexible capability will retire by 2020

# The renewable integration study process quantifies operational requirements and evaluates fleets ability to meet operating requirements.

(Regulation,

Balancing)

Wind / Solar

and Load

**Profiles** 

Costs, Emissions Import/Export Capacity Factor

Infrastructure

Needs

**Portfolios** 

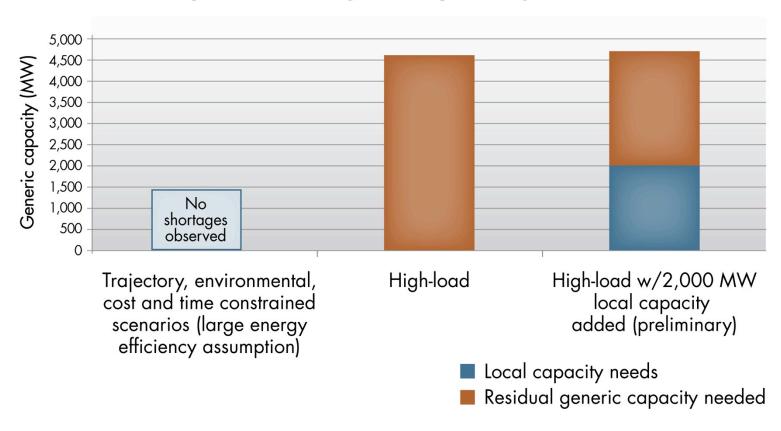

# 33% scenarios in 2020 cover range renewable and load conditions.

Case	Case Title	Description			
1	33% Trajectory	Based on contracted activity			
2	Environmental constrained	High distributed solar			
3	Cost constrained	Low cost (wind, out of state)			
4	Time constrained	Fast development (out-of-state)			
5	20% Trajectory	For comparison			
6	33% Trajectory high load	Higher load growth and/or energy program under-performance			
7	33% Trajectory low load	Lower load growth and/or energy program over-performance			

# Potential need for 4,600MW of upward flexible resources observed in the high-load scenario.

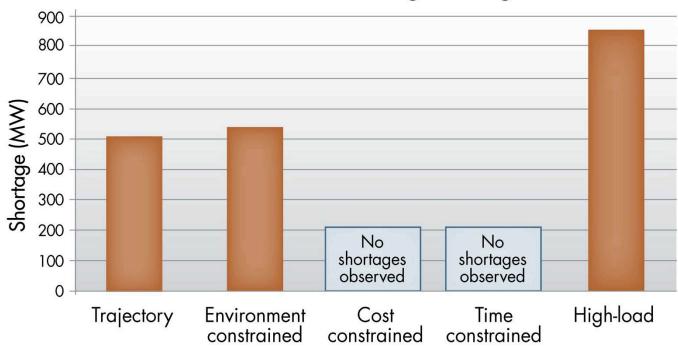

#### Upward balancing flexibility shortage/needs

## Out of approximately 3,500 MW downward balancing requirements, some hours of potential shortages were observed.

Note: Downward balancing may be more effectively and efficiently managed using curtailment or storage rather than less economic dispatch of flexible resources to higher level to maintain downward flexibility

# Development of new generation infrastructure has significant lead time.

Long-Term Procurement Plan	2012	2013	2014	2015	2016	2017	2018	2019	2020
Request for Offer Design									
Request for Proposal									
Interconnection, Permit Preparation									
Permitting									
Construction									

#### Management intends to focus on the following:

- Maintaining the availability of capacity currently on the system to enable successful operations during the transition period.
- Accelerating ISO market design work to gain access to additional flexibility.
- Refining local capacity studies for 2020 so that timely procurement decisions can be made in the 2011-2012 CPUC procurement cycle.
- Supporting generation alternatives to meet flexibility needs such as demand response and storage, with the goal of meaningful levels of deployment before 2020.
