# 2018 – Deactivation of TLS 1.0 & 1.1

Info	Details/Date
<b>Summary</b>	The California ISO will deactivate Transport Layer Security (TLS) 1.0 and 1.1 in the market and performance (MAP) stage environment on <b>February 20, 2018</b> , in the production environment on <b>April 23, 2018</b> , and only TLS 1.2 will remain active. It is necessary for market participants to enable TLS 1.2 as soon as possible in browsers and APIs.
<b>Details</b>	<p>It is necessary for market participants to enable TLS 1.2 in browsers and application programming interfaces (APIs) as soon as possible in order to continue to access the MAP stage environment from <b>February 20, 2018</b> onwards, and to continue to access the production environment from <b>April 23 onwards</b>, as only TLS 1.2 will remain active. Market participants can enable TLS 1.2 immediately; the MAP stage and production environments currently allow TLS 1.2. Note: There is no need to <i>disable</i> TLS 1.0 and 1.1 in browsers and APIs because the versions are backward compatible.</p> <p>Once TLS 1.0 and 1.1 are deactivated in the MAP stage environment, the ISO encourages market participants to confirm successful connectivity to the MAP stage portal, portal application's user interfaces (UIs) and APIs prior to the production environment deactivation, which will be the same on April 23, 2018. The deactivation of TLS 1.0 and 1.1 is in order to align with industry best practices for security and data integrity.</p> <p>The <i>Systems Access Information for Market Participants</i> document contains the information to access the MAP stage and production environments. This document is available on the ISO website at <a href="http://www.caiso.com/Documents/SystemAccessInformation_MarketParticipants.pdf">http://www.caiso.com/Documents/SystemAccessInformation_MarketParticipants.pdf</a>.</p> <p><b>Note: Automated Dispatch System (ADS) users on versions older than 6.1.0.0 will need to upgrade to the current version, as older versions are not compatible with TLS 1.2.</b> Update the ADS client through the production Market Participant Portal (MPP) installation package download at <a href="https://mpp.caiso.com/ads_install">https://mpp.caiso.com/ads_install</a>. # Spring 2018 - Commitment Cost Enhancements Phase 3 (cont.)

## CCE3: Project Timeline, Deployment Dates, Major Milestones

### Discovery/Evaluation Timeframe: Expectations

- New process to be defined; primarily an internal CAISO effort
- CAISO will identify resources impacted, type of constraints they have, and what time of eligibility period they will declare (monthly, annual, rolling)
- CAISO will then identify the formulation for calculation of opportunity costs (i.e. types of constraints that fit into model)
- CAISO can then validate the type of constraint declared and how constraints are translated into any of the three defined model constraints in the system
- CAISO will also be able to separate the resources that go into formula-based calculation versus resources that fall into negotiated opportunity costs.
  - For the negotiated option, CAISO will identify how to determine negotiated opportunity costs, which will be tailored to each resource.
- Planning for simulation of OCC in September, including integration of the OCC so that MPs can see adders flowing into SIBR and available in CMRI.
- Prior to November 1<sup>st</sup>, data will not be flowing downstream (publication explicitly blocked). During this period CAISO will interact with each MP depending on the specifics of their resources. This will be tracked via CIDI tickets.
