

CRR FNM Related Questions:

1) SVP Question: Please provide the most current version of the FNM that includes any changes the CAISO has made to capture its IBAA modeling proposal.

CAISO Response: The only full network model that the CAISO releases is the CRR FNM. See 6.5.1 of Part A of Appendix BB of the Current CAISO Tariff. The CRR FNM that was released last summer as part of the CRR Allocation and Auction process is the only CRR FNM that the CAISO has released and that is available for release at this time. The CRR FNM that was released last summer captured the IBAA modeling concepts through the mapping of the Scheduling Point locations to the same IBAA hubs currently being proposed.

2) SVP Question: The non-disclosure agreement for access to the full network model discusses using the model for purposes of analyzing the ISO's CRR markets. Although the CRR markets are a significant part of the concerns with the IBAA, and all of the analysis is related, directly or indirectly, to CRRs, or prices that impact CRRs, we wanted to be sure that use of the full network model for analysis of the IBAA is permitted under the non-disclosure agreement. If not, Santa Clara would like the ISO's "written consent" under section 3(a) of the non-disclosure agreement to use the model for purposes of evaluating the IBAA proposal.

CAISO Response: Pursuant to Section 3(a) of the CAISO REVISED NON-DISCLOSURE AND USE OF INFORMATION AGREEMENT CRR FNM DISTRIBUTION, the CAISO confirms that the above stated proposed use of the CRR FNM is consistent with the purposed stated in Section 1 of the NDA.
