

## Comments on Transmission Constraint Tariff Language

Submitted by	Company	Date Submitted

The proposed tariff language provides details and requirements regarding market participants' obligations to obtain the Transmission Constraints Enforcement List. However, the proposed tariff language provides few details about what information the CAISO will provide in the Transmission Constraints Enforcement List.

Dynegy appreciates both the stakeholder process the CAISO undertook to consider what transmission constraint information it should post and the ultimate outcome of that process. To honor the commitments the CAISO made in that process, the CAISO should list in its tariff the transmission constraint information it has committed to provide. It appears the CAISO has created a new defined term – "Transmission Constraints Enforcement List". It would be appropriate to list the information that will be provided in that list in the tariff Appendix A definition of that term.

Dynegy appreciates the opportunity to submit these comments.
