

The information contained in this report is preliminary and subject to change without notice. Any questions regarding this report should be directed to CAISO MQRI.

This report depicts greenhouse gas (GHG) emissions for the California Independent System Operator’s (ISO) balancing authority area as a direct result of the dispatch of ISO internal resources and imports, including dynamic resources, serving ISO load.

The report reflects total GHG emissions to serve ISO loads.

FIGURE 1 – Total GHG emissions to serve ISO load. This figure reflects the sum of GHG emissions from internal ISO dispatches and GHG emissions from imports serving ISO load through February 28, 2017. The graphic shows GHG emissions in 2016-2017 continue to track below the previous three years.

YTD (January - February) million mTCO2	2014	2015	2016	2017
GHG Emission to serve ISO load	10.64	10.03	9.10	8.34
