

The information contained in this report is preliminary and subject to change without notice. Any questions regarding this report should be directed to CAISO MPP.

This report depicts greenhouse gas (GHG) emissions for the California Independent System Operator’s (ISO) balancing authority area as a direct result of the dispatch of ISO internal resources and imports, including dynamic resources, serving ISO load.

The report reflects total GHG emissions to serve ISO loads.

FIGURE 1 and 2 – Total GHG emissions to serve ISO load. This figure reflects the sum of GHG emissions from internal ISO dispatches and GHG emissions from imports serving ISO load through October 31, 2021.

YTD (Jan - Oct) million mTCO2	2015	2016	2017	2018	2019	2020	2021
GHG Emission to serve ISO load	55.94	48.74	43.64	44.42	40.97	40.97	43.88

The information contained in this report is preliminary and subject to change without notice. Any questions regarding this report should be directed to CAISO MPP.

**FIGURE 3 – Total hourly GHG emissions to serve ISO load.** This figure reflects the hourly sum of GHG emissions from internal ISO dispatches and GHG emissions from imports serving ISO load for the month of October 2021.
