Longroad Energy comments on the January 2025 Transmission Development Forum.

1. Can CAISO and PG&E clarify the difference between the New Manning 500 kV substation TPP upgrade (T.009189) and the New Manning 500 kV substation RNU upgrade (C14P2-NFT02)?
 - a. What is the difference in scope between T.009189 and C14P2-NFT02?
 - b. Why are the In-Service dates different for the two line items (4/1/2028 for the TPP upgrade and 6/1/2028 for the RNU)?
 - c. If a project has the New Manning 500 kV substation as a TPP PNU (required for deliverability), but not as an RNU, will the project be granted FCDS upon the earlier in-service date (4/1/2028)?
