Subject: GMC Charge Code 4537 – Market Usage
Forward Energy Discussion Paper

Submitted By: Bob Kargoll

Company: PG&E

Date: August 10, 2009

1. Which of the options listed in the whitepaper as a potential change to the structure of the Market Usage Forward Energy GMC Charge Code do you support?

PG&E supports Option 1. Option 1 maintains the current methodology of netting an SC's Generation and Load in the Day-Ahead Market. Netting Generation and Load more accurately measures an SC's impact on the ISO's Forward Energy market than the "no netting" proposed for Option 2.

2. If none of the options presented in the whitepaper are supported, do you have an alternative proposal?

N/A
