

California ISO Release User Group

August 18, 2026

10:00 a.m.–11:00 a.m. (Pacific Time)

Calls and webinars are recorded for stakeholder convenience, allowing those who are unable to attend to listen to the recordings after the meetings. The recordings will be publicly available on the ISO web page for a limited time following the meetings. The recordings, and any related transcriptions, should not be reprinted without the ISO's permission.

Consolidation of Technical User Group and Release User Group meetings

The California ISO will consolidate the Technical User Group (TUG) meeting into the Release User Group (RUG) meeting, effective Aug. 18, 2026.

Going forward, technical topics that were previously addressed in the TUG forum will be incorporated into a dedicated technical segment within the RUG agenda. This change is intended to streamline stakeholder engagement by providing a single forum for release planning, project updates, implementation activities, and related technical discussions.

The combined format will:

- Reduce the number of recurring meetings for stakeholders
- Improve visibility of technical considerations alongside release planning and project updates
- Provide a more efficient forum for project teams and market participants
- Streamline meeting coordination and communications
- The first combined meeting will be the Release User Group (RUG) meeting on Aug. 18, 2026. Meeting recordings will be made available on the Release User Group (RUG) webpage.

The ISO appreciates your continued participation and looks forward to discussing both release and technical topics in this consolidated forum.

Agenda

- Release Plans
- Technical User Group topics – No items today

Release Plan Summary

Fall 2026 Release

- EDAM Onboarding PGE
- EDAM Enhancements 2026
- EDAM Enhancements 2026 – Inter SC Trades

Independent 2026 Release

- Contractual Share for Renewable Forecasting
- FERC 881 Track 3 MVP
- Transmission Exchange Agreement Renegotiation
- FERC 2023 Generator Interconnection Life Cycle
- ✓ Missing Monitoring and Meter Data Notice Automation 8/5
- DACA As A Service Implementation
- DACA As A Service Implementation – DAAS Application
- DACA As A Service Implementation – DAAS Settlements

Spring 2027 Release

- FERC 881 Track 3
- Resource Adequacy Modeling & Program Design - Resource Visibility
- Greenhouse Gas Coordination Accounting & Reporting

Fall 2027 Release

- EDAM Onboarding BANC
- EDAM Onboarding LADWP
- EDAM Onboarding PNM
- EDAM Onboarding TID

Future Release

- Settlement Upgrade ProjectEnhanced Curtailment Calculator (ECC) Expansion for Western Interconnect SOL
- Congestion Revenue Rights Enhancements – Jul '26 Board approved
- EDAM Congestion Revenue Allocation
- Gas Resource Management – Dec '25 WEM GB approved
- Storage Design & Modeling
- Price Formation Enhancements

Fall 2026 Release

EDAM Onboarding PGE

EDAM Enhancements 2026

EDAM Enhancements 2026 – Inter SC Trades

Fall 2026 – EDAM PGE

Project Info	Details/Date
Application Software Changes	System modifications as needed to accommodate any unique Portland General Electric needs to support their EDAM onboarding.
BPM Changes	EDAM BPM will be updated if needed to reflect changes identified during the onboarding and as required to reflect the unique processes of Portland General Electric.
Market Simulation	March 2, 2026 through May 29, 2026
Parallel Operations	June 1, 2026 through September 15, 2026

Milestone Type	Milestone Name	Dates	Status
Market Simulation	Market Simulation Window	March 2, 2026 through May 29, 2026	Complete
Parallel Operations	Parallel Operations	June 1, 2026 through September 15, 2026	In Progress
Tariff	N/A (filed as part of Implementation)	N/A	N/A
Production	Activation	October 1, 2026	On Track

Release Activation Overview for EDAM Onboarding of PGE: presentation on September 17, 2026 *tentative*

EDAM Enhancements 2026

Business Opportunity

What:	The EDAM Enhancement 2026 initiative will build on the DAME & EDAM) by: 1. Addressing high-priority gaps in trading and scheduling market capabilities 2. Providing equitable data visibility and reporting for EDAM entities 3. Adding automation to day-ahead processes to reduce manual effort and improve collaboration with EDAM entities The benefits of this project include increased satisfaction among EDAM entities and the ability to continue expanding market participation without overburdening operations teams. Specifically, this initiative will prepare the ISO for the 2026 EDAM implementation of Portland General Electric (PGE). This effort will run in parallel with PGE's onboarding and will leverage the same market simulation and parallel operations where appropriate.
Who does this opportunity/problem impact:	EDAM Entities
BRS	<u>Version 1.0</u> – 08/17/26 Publish external BRS for 14 EDAM enhancements Version 0.6 – 6/30/2026 Publish external BRS for the first two high priority enhancements, Inter-SC trading and ADS provision, support market Simulation timeline

EDAM Enhancements 2026

The scope of EDAM Enhancements 2026 includes multiple items, with development prioritized accordingly. External Business Requirements Specifications (BRS) will support ongoing development and align with the market simulation timeline.

Priority	Scope Item	Description
1	Inter-SC Trades and Associated CMRI Reports	Enable inter-Scheduling Coordinator (SC) energy trading within EDAM and WEIM BAAs. Add IST final trade reporting from SIBR to CMRI for EDAM entity UI and API access.
2	Automated Provisioning of ADS Dispatch Information to EDAM Entities	Introduce a new role allowing both EDAM and WEIM entities to view all resource dispatches within their BAA through ADS.
3.1	Entity RTUC Advisory Schedule Report in CMRI	Enhance the existing Real-Time Unit Commitment (RTUC) Advisory Schedules Report to EDAM/WEIM Entity
3.2	Capacity Range Report in CMRI	CMRI report Capacity ranges from MQS for SC shadow settlements
4	Transfer Location to ITC Mapping in ITS from MF	Include tie and transfer resources not scheduled at the scheduling point in the ITC limit calculation by using the Tie-to-ITC mapping and transfer location to ITC mapping
5	Provide EDAM Entities access to report of day ahead results in BAAOP	Enable EDAM entities to access the set of DAM User Interfaces in BAAOP
6	Multiple GHG areas GHG functionality	Testing and implementation of functionality to meet 2027 WA GHG requirements, area base load
7	Manage AS bids for EDAM in RTM	Allow EDAM resource to submit AS self-provision bid in SIBR in RTM
8	EDAM Entity DAM Data Access: TSR Visibility in SIBR	Provide Service for External Entity to retrieve TSR schedule and type
9	SIBR RSE Capacity Report future dates	Enhance report resource advisory max bid capacity of CAISO and EDAM entities for D+1 through D+7
12	OASIS transmission interface usage report for TSR/ETSR and IR/RC	Have TSR/ETSR schedules included with SR net energy schedules (existing) in the Transmission Interface Usage report and Current Transmission Usage on OASIS Update UI Transmission Interface Usage include IR/RC contributions
13	TCORs/ITCs in PLC	EDAM Entity Visibility and Management of TCOR/ITC Data in PLC
14.1	Access Registered System resources in Master File (MF)	API that enables entities to retrieve registered system resource operational data
—	Coming	Additional scope items will be defined in future BRS releases.

Fall 2026 – EDAM Enhancements 2026 Inter SC Trades

Project Information	Details	
Scope Item	Inter-SC Trades and Associated CMRI Reports	
Description	Enable inter-Scheduling Coordinator (SC) energy trading within EDAM and WEIM BAAs. Add IST final trade reporting from SIBR to CMRI for EDAM entity UI and API access. Define Trading Hubs and resource association for EDAM and WEIM BAAs For each EDAM BAA or WEIM BAA Define the one or more Trading Hubs • For CISO, keep existing two Trading Hubs • For EDAM BAA, allow EDAM entity to request one or more trading hubs, if the BAA only have one Trading hub, define trading hub on the DGAP • For EDAM BAA, allow EDAM entity to request trading location to be defined by Master File based up on specific supply resources • For the BAA is in both the EDAM and WEIM, the same Trading hubs are applicable for EDAM and WEIM • For the BAA is in WEIM only, define the trading hub include Participating resource and non-participating resources, same as for DGAP • the Generating resource in each EDAM or WEIM BAA must be associated with one and only one Trading Hub	
Impacted Systems	MF, SIBR, CMRI	
BRS	Version 1.0 – 08/17/26 Version 0.6 – 6/30/2026	
Market Simulation	August 4, 2026 – August 21, 2026	
Production	August 26, 2026	
Training Course		Date and time

Missing Monitoring and Meter Data Notice Automation Complete 08/05/26

DACA As A Service Implementation

DACA As A Service Implementation – DAAS Application

DACA As A Service Implementation – DAAS Settlements

Contractual Share for Renewable Forecasting

Business Opportunity

What:	Business processes and system changes are needed to support the implementation of renewable contractual share-based resources with the possibility of a preferential order. System changes to accommodate forecasting requests of contractual share. This initiative will deliver the business process and system enhancements necessary to support the implementation of renewable contractual share-based resources, including the potential for a preferential order. These changes will enable CAISO to accommodate contractual share forecasting requests and ensure the continued integrity of existing renewable forecasting for both Persistence and external forecasting service providers (FSPs). From a business perspective, this effort will: • Enable new renewable forecasting capabilities that incorporate contractual share percentages. • Maintain the accuracy and reliability of current renewable forecasting processes and systems for Persistence and external FSPs. To achieve this, new data elements will be introduced, including the storage and management of contractual percent share information for applicable resources.
Who does this opportunity/problem impact:	This will have impacts to the following areas: • VER Market Participants • Forecasting (ALFS/ALFSOA, PIWS) • Real time Operations (Siemens Market System RTD) • Resource Management (MF) • Forecast Service Providers • Outages (WebOMS) • Resource Adequacy • NRI (RIMS System)
Milestones	Market Simulation – Late August 2026 Production – September 2026

2025-27 – FERC 881 – Managing Transmission Line Ratings

Project Information	Details/Date		
High Level Project Scope	This initiative will address the California ISO's compliance with FERC Order No. 881 in establishing new transmission line rating requirements Order No. 881 establishes new transmission line rating requirements for public utility transmission providers - Establish and use ambient-adjusted ratings and seasonal ratings for all transmission lines unless excepted - Use AARs for near-term transmission service requests - Use seasonal rating for long-term transmission service requests - RTOs/ISOs must implement systems and procedures to allow transmission owners to electronically update transmission line ratings at least hourly - Use uniquely determined emergency ratings for contingency analysis in the operations horizon and in post-contingency simulations of constraints - Implement transparency reform

CAISO/RCWEST FERC 881 Implementation:

- Track 1 and Track 2 are in flight to be completed by December 2025.
 - **Track 1 – Real Time Reliability Applications**
 - ✓ Target Capability ready by end of December 2024.
 - ✓ Final changes went active with webLineR production
 - **Track 2 – Operational/EMS Model Data and Applications**
 - ✓ webLineR product utilized for receiving Look ahead ratings.
 - ✓ webLineR went into Production July 2025
 - ✓ TR updated to accept and display four-season submissions Nov 2025
 - ✓ webOMS updated to display four-seasons Nov 2025
 - CRR updated to display four-seasons Dec 2026
 - **Track 3 – Market Application and Look Ahead Applications**
 - Proposing realignment of phased in implementation.
 - **Phase 1: Prioritizing AAR in Market Applications Q4 2026**
 - Phase 2: Look-Ahead & Contingency Applications, Remaining Compliance Work 2027
 - Phase 3: Incremental Seasonal Ratings updates from webLineR 2027

2026 – Transmission Exchange Agreement-Renegotiation

Project Information	Details/Date
High Level Business Problem or Need	The ISO is committed to develop a process or system that allows Western Area Power Administration – Sierra Nevada Region (“WAPA”) to resell some or all of their 400 MW ownership rights on the PACI#1 line to other SCIDs and retain the perfect hedge and scheduling priority to further contract negotiations to extend the term of the Transmission Exchange Agreement. The Transmission Exchange Agreement (“TEA”) with WAPA-SNR, PG&E and ISO is scheduled to expire 9/30/2024. A term of the original agreement executed in 2004, was that the ISO would develop a system that allowed WAPA to sell their unused capacity on their line. This project provides solution to the scheduling issue which needs to be in place by June 2024 to ensure that the ISO has solved the problem and support filing an amendment and extension of the TEA at FERC.
High Level Project Scope	• WAPA needs functionality to sell their TOR to other parties on their OASIS. • If the TOR rights are sold, then WAPA will notify the CAISO to provide the purchaser the hedging and scheduling priority opportunity provided all ETCs/TORs. • The market and settlement systems need to be able to move the Contract Reference Number (“CRN”) from the WAPA CRN to the purchaser SCIDs so that the settlement to the purchaser SCID reverses the costs of the transmission access charge and congestion (aka the perfect hedge) and provides a high scheduling priority in the IFM and RTM. • WAPA will not take on the obligation to settle with their purchaser. • WAPA can sell any increments of MWs up to their 400 MW ownership rights. Therefore, the solution needs to be flexible enough to allow the “existing” TORs to vary the MWs capabilities. [Note: The MW increments to be sold can be no less than 5 MW.] • WAPA’s functionality allows them to schedule between Malin and Round Mountain, Malin and PG&E DLAP, and Malin and Tracy. This would be the source and sink that that functionality needs to provide. • If there are outages on the line, the curtailment should be consistent with current practice.

2026 – FERC 2023 Generator Interconnection Life Cycle

Project Information	Details/Date
High Level Business Problem or Need	Effective with Cluster 15, the resource interconnection process will transition to maintain compliance with FERC Order 2023 using a new platform GRIP. This mandate will streamline the intake of generator interconnection requests, study processes, contracting and management of the queue.
High Level Project Scope	Align the following Cluster 15 resource Interconnection processes to meet compliance of FERC Order 2023 tariff provisions: - Transition from GIDAP to new Resource Interconnection Standard (RIS) procedures - Initiate Cluster Request Window for Interconnection Request (IR) submission, Customer Engagement Window, Cluster Study process including scoping and results meeting, Reassessment process, Contracting and Queue Management - Increase transparency of information to customers and public Cluster 14 and prior will initially remain in RIMS but will migrate to GRIP
Releases	Release 1 of this project opened the IR Cluster Request Window from October 1 to December 1, 2024. Since then, subsequent releases in 2025 and Q1/Q2 2026 focused on meeting several business requirements deployed in the Grid Interconnect (GIC) Study Manager (SM) modules. GIC Module Release 4.2 completed in PROD on 06/25/26. GIC Release 4.3 and SM Release 12 completed in PROD on 07/28/26. This is an Agile project, therefore further GridUnity releases will be added for Grid Interconnect (GIC) and Study Manager (SM) modules throughout 2026.

2026 – Missing Monitoring and Meter Data Notice Automation

Project Information	Details/Date
High Level Business Problem or Need	- CAISO intends to provide a solution to Market Participants that would allow them the functionality to view Monitoring Data that has been successfully submitted or missing, prior to the tariff defined submission deadline. This would allow the Market Participant to self-correct and timely submit Monitoring Data to the CAISO via MRI-S and avoid penalty. - Because Monitoring Data is very similar to Meter Data and shares the same tariff defined submission deadline, CAISO plans to leverage the solution proposed for missing meter data and subsequently implement the requirements needed for missing monitoring data. - Current business practices call for manual notifications to be sent to market participants regarding metering and monitoring data. This approach is inefficient and non-sustainable. Instead, CAISO intends on automating these notifications to Market Participants.
High Level Project Scope	Via new MRI-S displays: - Provide Market Participants the ability to see which resources have outstanding meter data submission. - Provide Market Participants the ability to see which resources have outstanding measurement type data.
BPM Changes	None. However, the MRI-S User Guide will be updated.
Tariff Changes	None
Impacted Systems	Internal Systems: DRRS, MRI-S

2026 – DACA As A Service (DAAS)

Project Information	Details/Date
High Level Business Problem or Need	With the implementation of Extended Day Ahead Market (EDAM), new EDAM entities are seeking a tool to provide them with a capability to perform their own Day Ahead Contingency Analysis (DACA) executions. The new application called DAAS (DACA as a Service) provides a subscription-based solution enabling EDAM entities to perform reliability studies for their own balancing areas.
High Level Project Scope	- Implement the new DAAS application and supporting technology to provide external access to DAAS - Implement processes and functions to support billing/invoicing and cash clearing for annual DAAS subscription fees

 - **Track 3 – Market Application and Look Ahead Applications**
 - Proposing realignment of phased in implementation.
 - **Phase 1: Prioritizing AAR in Market Applications Q4 2026**
 - Phase 2: Look-Ahead & Contingency Applications, Remaining Compliance Work 2027
 - Phase 3: Incremental Seasonal Ratings updates from webLineR 2027

Resource Adequacy Modeling & Program Design - Resource Visibility

Business Opportunity

What:

Enhance the ISO's resource adequacy processes by improving visibility into resources available for procurement through the ISO's backstop measures. Obtaining this information will better inform the ISO's Capacity Procurement Mechanism processes and is a first step in a multi-phase effort to enhance the effectiveness of the ISO's backstop processes.

Greenhouse Gas Coordination Accounting & Reporting

Business Opportunity

What:

Evolve the design of a greenhouse gas (GHG) emissions accounting report available to market participants to support compliance with state, local, or corporate GHG reduction targets. The approach overlays ownership and contract data with market dispatch results to produce data that allow reporting entities to see and understand the emissions intensity of their portfolio. This data increases the transparency of GHG emissions generated in the Western Energy Imbalance Market and Extended Day Ahead Market footprint.

California ISO

Settlement Upgrade Project

Settlement Upgrade Project – Status

- Market Simulation 11/1/27 – 2/11/28
- Parallel Operations 3/1/28 – 4/28/28
- Production 5/1/28

Settlement Upgrade Project – Overview

- The current settlement system, implemented in 2008 as part of the Market Redesign and Technology Upgrade (MRTU) implementation, is nearing its end of life. The CAISO is upgrading existing settlement applications to approved architectural and information security standards.
- Benefits for our customers include:
 - Improved business efficiency
 - Better gathering and analysis for data and front-end improvements for customers interacting with CAISO Settlement Systems
 - Increased transparency for some calculations
 - Accommodating data processing increases resulting from new market products and an increase in market participants
 - Ability to perform complex settlement calculations

Settlement Upgrade Project – Targeted Goals

- The ISO will work closely with our market participants to ensure seamless transition from e-Terra 2.5 to 3.0 configuration output file.
- The ISO will leverage the Settlement User Group and Technical User Group for participants to ask more technical questions.
- The ISO will provide an environment with production-like data allowing customers to validate changes.
- The system will provide settlement outputs in various file formats, allowing all customers to access and use the data in day-to-day operations.
- The ISO will strive to make formulas and inputs transparent to enable market participants to monitor and/or validate settlement results.
- The ISO will provide market participants with an extended market simulation and timely support to the market participants and their vendors during the testing phase.

Settlement Upgrade Project – Targeted Goals (continued)

- From a vendor perspective:
 - ISO will provide third party vendors with support during the transition period.
 - ISO will provide an extended market simulation and/or parallel statements and invoices during the transition period so vendors can resolve defects on their systems.
 - ISO will provide open communications to resolve settlement differences through a customer forum.

Settlement Upgrade Project – Status

- The ISO continues reviewing the overall schedule for implementation.
- The implementation will take place after EDAM and DAME implementation.
- ISO will provide quarterly updates for the implementation for now and will ultimately increase the frequency of updates and the depth of information provided accordingly as we proceed
- The updates will be provided in the Release User Group and Settlement User Group
- To help ensure alignment of our communications between these two forums, this same update was provided in the next Settlement User Group call
- For comments or questions, please submit CIDI cases
