

California ISO Readiness Notes

Title: ADS Query Defect Fix

Expected Production Date: Monday, July 15, 2024

Contact: CustomerReadiness@caiso.com or submit a CIDI ticket

Project Associated: Resource Sufficiency Evaluation Enhancements (RSEE) Phase 2

Details:

As a result of the RSEE Phase 2 initiative, inertie resources with low priority exports are required to use the following MW Priority types on their e-tags:

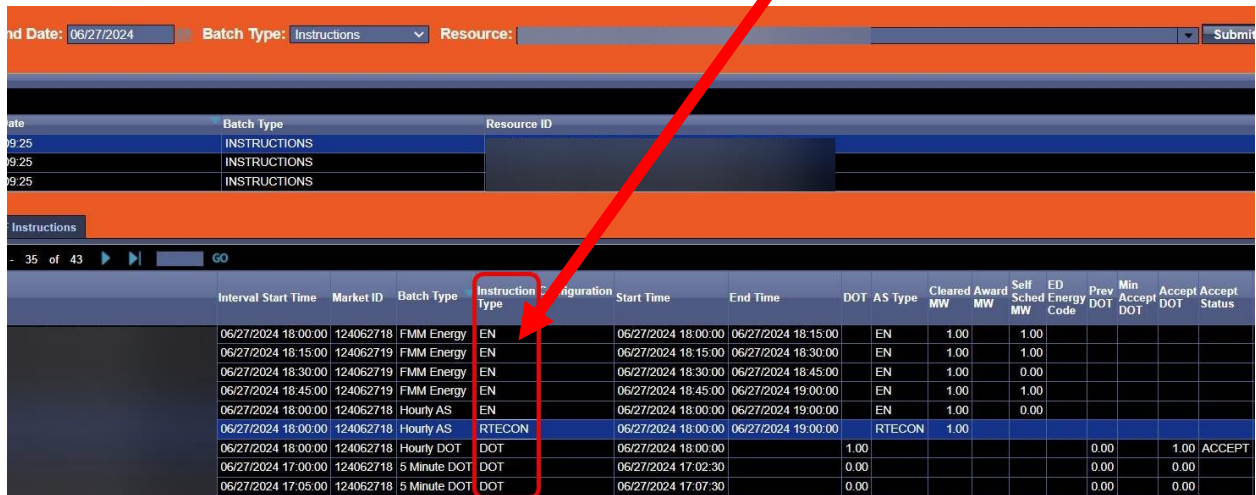

- DALPT
- RTECON
- RTLPT

Additionally, the following MW Priority types will now display as applicable:

- DAECON
- DAPT
- RTPT

Currently the MW priorities for inertie resources are displayed in the ADS Instruction Grid. **With this fix the ADS Query Tool will now display these MW Priority types in the Instruction Type column.**

This change will only impact the UI (not the API).
