Southern California Edison (“SCE”) has reviewed the CAISO’s Standard Capacity Product (“SCP”) II Issue Paper, dated December 4, 2009 (“Issue Paper”). SCE does not oppose the scope of issues presented in the paper. SCE appreciates the opportunity to participate in this stakeholder process and will offer more substantive comments once it has the opportunity to consider the CAISO’s Straw Proposal as to how it will apply the SCP to demand response resources and those resources whose qualifying capacity is based on a historical average. SCE looks forward to working with the CAISO on these and other issues designed to enhance overall system reliability and streamline transactions.
