

Temporary Placeholder for C16 Required User-Defined Model

The CAISO Tariff, Appendix KK, Attachment A to Appendix 1, item 13 (1) requires a “user-defined root mean squared (RMS) positive sequence dynamics model” (UDM) for non-synchronous generators, provided in PSLF format. Cluster 16 interconnection customers are required to upload into GRIP a UDM for an Interconnection Request (IR) to be deemed complete.

This sheet, when uploaded into GRIP, will delay the tariff requirement for the UDM. The temporary placeholder must be uploaded into GRIP to be accepted for both the completeness evaluation and the validation of the IR required by CAISO Tariff, Appendix KK, Sections 3.5.1 and 3.5.2.1, respectively. Non-UDM will not be accepted and should be uploaded to GRIP.

Cluster 16 Interconnection Customers will be notified via CAISO market notice when, 1) the required UDM will be due to the CAISO and 2) the UDM must be validated by the CAISO and PTO. IRs not meeting these requirements will be withdrawn with no opportunity to cure.
